HEALTH & SAFETY WAREHOUSE MANAGEMENT

The Law

The Workplace (Health, Safety and Welfare) Regulations 1992 place duties on employers to ensure that the workplace is safe and maintained in good order.

The importance of health & safety management in the warehouse

- The Workplace (Health, Safety and Welfare) Regulations 1992 place duties on employers to ensure that the workplace is safe and maintained in good order, including providing the workforce with sufficient health & safety training.
- Warehousing is a complex industry that can expose workers to a number of risks.
- Health & Safety must be proactively managed.
- Effective health and safety management involves the employer identifying the risks that arise in the workplace.
- Adopting reasonable health and safety measures to control the risks that may arise.

CAUSES OF INJURY

There are many potential causes of injury in a warehouse. The most common causes of injury include:

- Slips, trips and falls.
- Impact with objects and structures.
- Being hit by moving or falling objects.
- Falls from height.
- Repetitive manual handling.

TRAINING

Providing employees with sufficient training is vital in the prevention of potential warehouse accidents.

- All employees should be provided with basic health & safety training during their induction.
- Employees should also be provided with specific training related to their work, this includes:
 - The hazards associated with their work.
 - Equipment used to carry out their work.
 - Procedures that should be taken into consideration.

PALLET STORAGE

- Pallets should be of sound construction, suitable for the goods and the conditions under which they are used.
- Where pallet loads are stacked for or on the, the heaviest items should be stacked at the bottom to allow support to the weight above.
- Pallets should be loaded correctly to ensure load stability, stacks or which way can help with this. Avoid stack heights to ensure contents do not collapse.
- Inspect pallets each time before use to make sure that they are in a safe condition.
- Items that can cause damage to materials should either be taken out of use until repaired, or be destroyed.
- When using pallet stacking in the warehouse, take into account the pallets used are suitable for the type of stacking available.
- Pallets can be stacked / stored by block stacking or using stacking frames, single-deck pallet racks, double-deck pallet racks, drive-in racks, pallet flow racks and push back racks.

CONDUCTING A RISK ASSESSMENT

A risk assessment is a careful examination of what in the work could cause harm to people, so that it can be determined whether enough precautions have been taken or what more has to be done to prevent harm.

Risk assessment can be summarised into 5 steps:

1. Identifying the hazards.
2. Deciding who might be harmed and how.
3. Evaluating the risks and deciding on precautions.
4. Recording your findings and implementing them.
5. Reviewing your risk assessment and updating procedures if necessary.

WAREHOUSE DESIGN & LAYOUT

It is important to provide a safe and healthy environment for your employees and visitors.

- Warehouses should be designed and laid out to allow for the safe movement of goods, materials and people.
- Good design and layout can help reduce accidents, including vehicles and people colliding and tripping.
- It is important to have a safe system of traffic movement.
- Methods and procedures for arrival, reception, unloading, loading and movement of vehicles within the premises should all be taken into consideration.
- People and vehicles should be segregated as far as is reasonably practicable.

When thinking about design and layout the following areas should be taken into consideration:

- Storage areas, aisles and gangways.
- Designated pedestrian traffic routes.
- Entrances and exits.
- Emergency escape routes.

RACKING INSPECTIONS

Inspect racking regularly to make sure it is properly and maintained properly and is safe.

There are 2 types of inspections:

1. Immediate reporting of damage and defects.
2. Visual inspections or regular intervals.
3. Expert inspections carried out at intervals by a competent person.

What to check?

- Are the racks plumb and level?
- Is there rust or corrosion on any metal component?
- Is the rack overloaded?
- Uprights - Are they bent or damaged? How bad is the damage?
- Checking the load beams for damages and deformation.
- Are the beams properly attached to the uprights?
- Are the clips, bolts, or safety pins, or beam attachment pins missing or damaged?
- Keep a record of inspections, damages and repairs, e.g. in a logbook. It will help track the regularity and thoroughness of the inspection process in the event of any future issue.
