Delleur, 2010-12-12 Due to the increasing demand for adequate water supply caused by the augmenting global population groundwater production has acquired a new importance In many areas surface waters are not available in sufficient quantity or quality Thus an increasing demand for groundwater has resulted However the residence time of groundwater can be of the order of thousands of years while surface waters is of the order of days Therefore substantially more attention is warranted for transport processes and pollution remediation in groundwater than for surface waters Similarly pollution remediation problems in groundwater are generally complex This excellent timely resource covers the field of groundwater from an engineering perspective comprehensively addressing the range of subjects related to subsurface hydrology It provides a practical treatment of the flow of groundwater the transport of substances the construction of wells and well fields the production of groundwater and site characterization and remediation of groundwater pollution No other reference specializes in groundwater engineering to such a broad range of subjects Its use extends to The engineer designing a well or well field The engineer designing or operating a landfill facility for municipal or hazardous wastes The hydrogeologist investigating a contaminant plume The engineer examining the remediation of a groundwater pollution problem The engineer or lawyer studying the laws and regulations related to groundwater quality The scientist analyzing the mechanics of solute transport The geohydrologist assessing the regional modeling of aquifers The geophysicist determining the characterization of an aquifer The cartographer mapping aquifer characteristics The practitioner planning a monitoring network *Landmarks in Earth Reinforcement* Hidetoshi Ochiai, 2001 Earth reinforcing techniques are increasingly becoming a useful powerful and economical solution to various problems encountered in geotechnical engineering practice Expansion of the experiences and knowledge in this area has succeeded in developing new techniques and their applications to geotechnical engineering problems In order to discuss the latest experiences and knowledge and with the purpose of spreading them all over the world for further development the IS Kyushu conference series on the subject of earth reinforcement have been held in Fukuoka Japan every four years since 1988 This fourth symposium entitled Landmarks in Earth Reinforcement is a continuation of the series IS Kyushu conferences and also aims at being one of the landmarks in the progress of modern earth reinforcement practice The first volume contains 137 papers selected for the symposium covering almost every aspect of earth reinforcement The second volume contains texts of the special and keynote lectures Geoenvironmental Engineering A.M.O. Mohamed, H.E. Antia, 1998-04-21 The new social and economic era calls for integration of ecology and economy in a system of cause and effect The central element in this shift is sustainable development Fundamental to the achievement of sustainable development is the requirement for environmentally responsible waste management and restoration of the environment Solutions to the complex problems confronted by waste management

and environmental restoration industry are currently handled by the geoenvironmental engineering profession that needs a good background in soil biology chemistry mechanics mineralogy and physics In recognition of this need this book summarizes relevant aspects of various soil physics mineralogy and chemistry as well as the chemistry of pollutants This treatment will provide sufficient background to students and practicing engineers to enable them to think about how to approach waste management and environmental restoration problems

URBAN SOLID WASTE MANAGEMENT Sudipto Ghosh,Amit Bhandari, Waste management considered the most complex issue in urban areas and it is associated with a variety of complex socioeconomic and environmental issues Rapid urbanization change in lifestyles and rise in population has resulted in the generation of huge quantities of solid waste The waste management system remains primitive and has failed to evolve with the demands of the rapidly changing situation The quantity of waste generated is much higher than the quantity collected transported and disposed of leading to the piling up of uncollected waste in streets public places and drains The unsanitary methods adopted for the disposal of municipal solid wastes pose a serious health concern The technologies that have been attempted in India run into rough terrain failed to bring desired environmental and public health benefits This book is comprised of articles highlighting the issues relating to problems in managing urban waste sustainability in waste management practices and generating wealth from waste contributed by eminent scholars in this field
