Water-Quality Engineering in Natural Systems David A. Chin, 2006-05-19 FOCUSING ON CONTAMINANT FATE AND TRANSPORT DESIGN OF ENVIRONMENTAL CONTROL SYSTEMS AND REGULATORY CONSTRAINTS This textbook details the fundamental equations that describe the fate and transport of contaminants in the water environment The application of these fundamental equations to the design of environmental control systems and methodologies for assessing the impact of contaminant discharges into rivers lakes wetlands ground water and oceans are all covered Readers learn to assess how much waste can be safely assimilated into a water body by developing a solid understanding of the relationship between the type of pollutant discharged the characteristics of the receiving water and physical chemical and biological impacts In cases of surface runoff from urban and agricultural watersheds quantitative relationships between the quality of surface runoff and the characteristics of contaminant sources located within the watersheds are presented Some of the text's distinguishing features include its emphasis on the engineering design of systems that control the fate and transport of contaminants in the water environment the design of remediation systems and regulatory constraints Particular attention is given to use attainability analyses and the estimation of total maximum daily loads both of which are essential components of water quality control in natural systems Readers are provided with a thorough explanation of the complex set of laws and regulations governing water quality control in the United States Proven as an effective textbook in several offerings of the author's class Water Quality Control in Natural Systems the flow of the text is carefully structured to facilitate learning Moreover a number of practical pedagogical tools are offered Practical examples used throughout the text illustrate the effects of controlling the quality quantity timing and distribution of contaminant discharges into the environment End of

chapter problems and an accompanying solutions manual help readers assess their grasp of each topic as they progress through the text. Several appendices with useful reference material are provided including current U S Water Quality Standards. Detailed bibliography guides readers to additional resources to explore particular topics in greater depth. With its emphasis on contaminant fate and transport and design of environmental control systems, this text is ideal for upper level undergraduates and graduate students in environmental and civil engineering programs. Environmental scientists and practicing environmental civil engineers will also find the text relevant and useful.

Engineering Hydrology of Arid and Semi-Arid Regions Mostafa M. Soliman, 2010-06-23. The natural scarcity of water in arid and semiarid regions aggravated by man made factors makes it difficult to achieve a reliable water resources supply. Communities in these areas pay the price for thousands of years of water manipulation. Presenting important insight into the complexities of arid region hydrology.

Gates, 2006. **Subject Guide to Books in Print**, 2001. *Quantification of Hydrologic Processes and Assessment of Rainfall-runoff Models in Miami-Dade County, Florida* David A. Chin, Raul D. Patterson, 2005. *Selected Water Resources Abstracts*, 1991. Methods of Environmental and Social Impact Assessment Peter Morris, Riki Therivel, Graham Wood, 2017-09-13. Environmental and social impact assessment ESIA is an important and often obligatory part of proposing or launching any development project. Delivering a successful ESIA needs not only an understanding of the theory but also a detailed knowledge of the methods for carrying out the processes required. Riki Therivel and Graham Wood bring together the latest advice on best practice from experienced practitioners to ensure an ESIA is carried out effectively and efficiently. This new edition explains how an ESIA works and how it should be carried out, demonstrates the links between socio-economic, cultural, environmental and ecological systems and assessments, incorporates the World Bank's IFC performance standards and best practice examples from developing as well as developed countries, includes new chapters on emerging ESIA topics such as climate change, ecosystem services, cultural impacts, resource efficiency, land acquisition and involuntary resettlement. Invaluable to undergraduate and MSc students of ESIA on planning, ecology, geography and environment courses, this internationally oriented fourth edition of *Methods of Environmental and Social Impact Assessment* is also of great use to planners, ESIA practitioners and professionals seeking to update their skills.
