Water Resources and Decision-Making Systems Cecilia Tortajada, Kevin Parris, 2016-03-23

Water data and information are essential to support efforts to understand manage allocate utilize and protect water resources The linkages between Water Information Systems and needs of decision makers are complex but can be encapsulated in a Driving Force Policy Needs Monitoring Data Management Reporting framework The rapid development in water policy reforms in many sectors and growing emphasis on demand side policy solutions to water resources management has created an information imbalance This imbalance can be characterised in terms of an inverted pyramid with implementation of many water policy initiatives supported by little data and information especially related to economic and financial elements to help guide decision makers toward more effective and efficient water resources management strategies Additionally as stress and demands on water systems increase and water becomes a more valued resource this tends to increase the value of water information both for water providers and users Nevertheless many countries are reporting that the capacity to collect water information is being undermined by a lack of resources while expertise to collect analyse and interpret water data for decision makers is being lost Finally the impact of climate change on hydrological regimes represents a key potential stress on water systems This issue could be the catalyst for adapting policies to provide more efficient and effective use and management of water resources and advance institutional and governance reforms in the water sector This book is based on a special issue of the International Journal of Water Resources Development

Fundamental Research Needs for Water and Wastewater Treatment Systems ,1977 *Making the Most of the Water We Have* David B. Brooks,Oliver M. Brandes,Stephen Gurman,2009 Based on the soft path approach to the energy sector a transition is now under way to a soft path for water This approach starts by ensuring that ecosystem needs for water are satisfied and then undertakes a radical approach to reducing human uses of water by economic and social incentives including open decision making water markets and equitable pricing and the application of super efficient technology all applied in ways that avoid jeopardizing quality of life The soft path for water is therefore a management strategy that frees up water by curbing water waste This book is the first to present and apply the water soft path approach It has three aims to bring to a wider audience the concept and the potential of water soft paths to demonstrate that soft path analysis is analytical and practical and not justeco dreaming and to indicate that soft paths are not only conceptually attractive but that they can be made economically and politically feasible Includes a tool kit for planners and other practitioners Published with POLIS Project and Friends of the Earth
