Fields, Networks, Computational Methods, and Systems in Modern Electrodynamics Leopold B. Felsen, 2004-12-16 This book consists of contributions given at a symposium in honour of Leopold B Felsen They represent the state of the art in dealing with electromagnetic fields their network theory representation their computation and finally with system applications The network formulation of field problems can improve the problem formulation and also contribute to the solution methodology Network theory systematic approaches for circuit analysis are based on the separation of the circuit into the connection circuit and the circuit elements Many applications in science and technology rely on computations of the electromagnetic field in either man made or natural complex structures Because different problems have their own combination of

geometrical features materials scales and frequency ranges no single method is best suited for handling all possible cases instead a combination of methods or hybridization is needed to attain the greatest flexibility and efficiency

Advances in Microwaves Leo Young, 2013-10-22 *Advances in Microwaves Volume 1* is a collection of papers dealing with the design and fabrication of a two mile accelerator optical waveguides and directional couplers One paper describes the design and fabrication of the disk loaded wave guide which serves as the accelerating structure of the Stanford two mile accelerator Another paper discusses the basic principles of guided propagation particularly the properties of the confocal lens systems or the beam guide variants One paper describes the main types of directional couplers namely waveguide directional couplers TEM Mode directional couplers to help scientists and researchers determine a particular design Some papers discuss singular integral equations to solve waveguide problems the application of Lie algebraic theory to microwave networks and partially filled waveguides and surface waveguides of rectangular cross section One paper explains the application of the singular integral equation method to rectangular waveguides including the infinite parallel plate configuration Another paper cites the exponentially tapered transmission line as an example to show the application of Lie algebras in solving problems related to the microwave field The collection is suitable for people in the field of applied mathematics nuclear physics quantum mechanics and applied physics
