Communication Systems Finn Arve Aagesen, Chutiporn Anutariya, Vilas Wuwongse, 2004-11-03 The 2004 IFIP International Conference on Intelligence in Communication Systems INTELLCOMM2004 held in Bangkok Thailand 23-26 November 2004 was the successor and an expansion of SMARTNET a series of annual conferences on intelligence in networks held during 1995-2003 under the auspices of IFIP TC6's Working Group 6.7 The Internet and Web provide more connection facilities hence the man-machine and machine-machine interactions will increase and communication will have an important role in modern systems. In order to obtain effective and efficient communication artistic social and technical issues have to be tackled in a holistic and integrated manner. However communication techniques concepts and solutions which have been developed so far treat these issues separately so that there arises a need for communication researchers and practitioners in different fields engineering science and arts to meet share their experience and explore all possibilities of developing integrated and advanced solutions which incorporate ideas from such disciplines as communication arts art design linguistics Web technologies computer system architecture and protocols computer science and artificial intelligence. INTELLCOMM 2004 was jointly sponsored by IFIP WG 6.7 Smart Networks and WG 6.4 Internet Applications Engineering and aimed to provide an international forum which brings academia researchers practitioners and service providers together. The discussion areas covered the latest research topics and advanced technological solutions in the area of intelligence in communication systems ranging from architectures for adaptable networks services and Semantic Web.

Web service technologies to intelligent service application interface and intelligent human interaction. INTELLCOMM 2004 received 112 paper submissions from 28 countries. From these 24 were accepted and are included in this proceedings. There were also 3 papers accepted for poster presentation published separately. **Voice Interaction Design** Randy Allen Harris, 2004-12-31 From the voice on the phone to the voice on the computer to the voice from the toaster speech user interfaces are coming into the mainstream and are here to stay forever. Soundly anchored in HCI cognitive psychology linguistics and social psychology this supremely practical book is loaded with examples how to advise and design templates. Drawing widely on decades of research in lexicography conversation analysis computational linguistics and social psychology author Randy Allen Harris outlines the principles of how people use language interactively and illustrates every aspect of design work. In the first part of the book Harris provides a thorough conceptual basis of language in all its relevant aspects from speech sounds to conversational principles. The second part takes you patiently through the entire process of designing an interactive speech system from team building to user profiles to agent design scripting and evaluation. This book provides interaction designers with the knowledge and strategies to craft language based applications the way users will expect them to behave. Loaded with examples and practical synopses of the best practice. An ideal combination of conceptual base

practical illustrations and how to advice for design and for the entire design process Will bring novice voice designers fully up to speed and give experienced designers a new understanding of the principles underlying human speech interaction principles from which to improve voice interaction design *Human-Computer Interaction* Andrew Sears,Julie A. Towards Expressive Perception and Generation in Human-Computer Conversational Interaction Yaohua Bu,Runnan Li,Zhenwei You,2024-07-31 The construction of a natural interactive human computer interaction has become an integral component of intelligent system development constituting a core subject within the field of human computer interaction Grounded in the utilization of human perception theories this study proposes a robust method for speech emotion recognition and a model for inferring user emotional state changes thereby achieving a hu man computer interaction experience characterized by both listening and articulating and conveying sentiments effectively Simultaneously focusing on the audio visual modalities within human computer interaction this research explores methods for con structing interactive feedback in auditory and visual modalities within real hu man computer dialog scenarios This aims to synchronize textual verbal and visual expressions in human computer interaction enhancing its naturalness improving user experience and augmenting satisfaction and pleasure during interaction The research contributions are as follows Introducing a method that robustly identifies user emotional states in real hu man computer speech dialogue scenarios through the utilization of local and global attention mechanisms This method generates robust and distinguishable representa tions of speech emotion thereby enhancing the robustness and accuracy of speech emotion recognition systems in authentic dialogue scenarios
