Feuding and Warfare Keith F. Otterbein, 2020-12-22 Originally published in 1994 the late Keith F Otterbein's scholarship had followed an overall design since 1962 when he began conducting comparative studies of warfare using both ethnographic and cross cultural methods Through a conceptual framework derived from systems theory he made signal contributions to our understanding of the role of warfare in human social evolution He formulated a Fraternal Interest Group theory utilizing it to explain not only feuding and warfare but also rape and capital punishment Believing that armed combat is learned behaviour he posed questions about its learning process that had yet to be answered He acted as a major synthesizer of the growing literature on warfare and led attempts among anthropologists to apply their knowledge of war and peace to current events This volume will serve both as a useful introduction to the anthropology of war and as a needed compendium of Professor Otterbein's ideas **Horrendous Death, Health, and Well-being** Daniel Leviton, 1991 A treatment of the incidence of horrendous death both inadvertent and deliberate which views the phenomenon as the greatest public health problem of modern times The author argues that as man causes such deaths he can also learn to eliminate them by collective action **The Paths to Domination, Resistance, and Terror** Carolyn Nordstrom, Joann Martin, 1992-02-25 The Paths to Terror offers a new and refreshing perspective on sociopolitical violence one that highlights the human experience of domination resistance and terror as they are woven into the fabric of everyday life These innovative essays take the reader from the Americas through Europe and the Middle East and to Asia to capture the cultural construction of sociopolitical violence The authors expand our view of the ethnographic reality revealing the complex interplay among local national and international actors in the perpetuation of violence and terror The organization of the essays along a continuum from domination through the emergence of resistance to the development of cultures of conflict and terror underlines the value of understanding the growth and resolution of violence as cultural dynamics A Natural History of Peace Thomas Gregor, 1996 A stimulating and innovative consideration of the concept causes and practice of peace in societies both ancient and modern human and primate We know a great deal about aggression conflict and war but relatively little about peace partially because it has been such a scarce phenomenon throughout history and in our own times Peace is more than the absence of war Peace requires special relationships structures and attitudes to promote and protect it A Natural History of Peace provides the first broadly interdisciplinary examination of peace as viewed from the perspectives of social

anthropology primatology archeology psychology political science and economics Among other notable features this volume offers a major theory concerning the evolution of peace and violence through human history an in depth comparative study of peaceful cultures with the goal of discovering what it is that makes them peaceful one of the earliest reports of a new theory of the organization and collapse of ancient Maya civilization a comparative examination of peace from the perspective of change including the transition of one of the world s most violent societies to a relatively peaceful culture and the decision making process of terrorists who abandon violence and a theory of political change that sees the conclusion of wars as uniquely creative periods in the evolution of peace among modern nations **The Roots of War** Anthony Stevens,1989

The Roots of War and Terror Anthony Stevens,2004 In *The Roots of War and Terror* Anthony Stevens provides profound insights into the nature and origins of armed conflict Combining the concepts of the archetype and the collective unconscious Jungian with crucial evidence from the behavioural and biological sciences Stevens exposes war as an ancient propensity rooted in human psychology particularly in the psychology and anatomy of the human male Stevens explains what attracts men to the profession of arms and describes the age old techniques still used in military training camps which are necessary to activate the warrior archetype in the masculine psyche The author sheds light on how leaders persuade populations to go to war and lays bare the unconscious fantasies that could draw us all to final Armageddon In later chapters in his book Stevens discusses ways of inhibiting the archetypes of war through educational policy and admission of women into the citadels of masculine power of diverting them into less destructive channels *The Roots of War and Terror* is an indispensable work for anyone wishing to understand the psychological basis of war or hoping to discover ways in which the unimaginable catastrophe of nuclear war could be avoided Denial and dissociation repression and projection enable us to remain cheerfully unconscious Disguised as defenders of our egos and protectors of our peace of mind those discreet flunkies are really secret agents in the service of the archetypes of war Unknown and unrecognised by
