World Economic Outlook, April 2013 International Monetary Fund. Research Dept.,2013-04-16 Global economic prospects have improved again but the bumpy recovery and skewed macroeconomic policy mix in advanced economies are complicating policymaking in emerging market economies Chapter 3 examines the prospects for inflation particularly because inflation was remarkably stable in the wake of the Great Recession and in fact has become less responsive to cyclical conditions Chapter 4 examines whether today s fast growing dynamic low income countries are likely to maintain their momentum and avoid the reversals that afflicted many such countries in the past

World Economic Outlook, April 2011 International Monetary Fund. Research Dept.,2011-04-11 The April 2011 edition of the World Economic Outlook assesses the global prospects for economic growth in the face of policy challenges that remain unaddressed and new challenges now coming to the fore The recovery is gaining strength but unemployment remains high in advanced economies and new macroeconomic risks are building in emerging market economies In advanced economies the handoff from public to private demand is advancing reducing concerns that diminishing fiscal policy support might cause a double dip recession Financial conditions continue to improve although they remain unusually fragile In many emerging market economies demand is robust and overheating is a growing policy concern Rising food and commodities prices present new risks to the global economy Two chapters directly explore these new challenges Chapter 3 reviews the potential impact of oil scarcity on global growth and Chapter 4 explores the potential response of international capital flows to changes in the global macroeconomic environment

World Economic Outlook, April 2008 International Monetary Fund. Research Dept.,2008-04-09 The global expansion is losing speed in the face of a major financial crisis The slowdown has been greatest in the advanced economies particularly in the United States where the housing market correction continues to exacerbate financial stress The emerging and developing economies have so far been less affected by financial market developments and have continued to grow at a rapid pace led by China and India although activity is beginning to

slow in some countries At the same time headline inflation has increased around the world boosted by the continuing buoyancy of food and energy prices Policymakers around the world are facing a diverse and fast moving set of challenges and although each country's circumstances differ in an increasingly multipolar world it will be essential to meet these challenges broadly taking full account of cross border interactions The World Economic Outlook WEO presents the IMF staff's analysis and projections of economic developments at the global level in major country groups classified by region stage of development etc and in many individual countries It focuses on major economic policy issues as well as on the analysis of economic developments and prospects It is usually prepared twice a year as documentation for meetings of the International Monetary and Financial Committee and forms the main instrument of the IMF's global surveillance activities World Economic Outlook, April 2012 International Monetary Fund. Research Dept.,2012-04-17 The April 2012 issue of the World Economic Outlook assesses the prospects for the global economy which has gradually strengthened after a major setback during 2011 The threat of a sharp global slowdown eased with improved activity in the United States and better policies in the euro area Weak recovery will likely resume in the major advanced economies and activity will remain relatively solid in most emerging and developing economies However recent improvements are very fragile Policymakers must calibrate policies to support growth in the near term and must implement fundamental changes to achieve healthy growth in the medium term Chapter 3 examines how policies directed at real estate markets can accelerate the improvement of household balance sheets and thus support otherwise anemic consumption Chapter 4 examines how swings in commodity prices affect commodity exporting economies many of which have experienced a decade of good growth With commodity prices unlikely to continue growing at the recent elevated pace however these economies may have to adapt their fiscal and other policies to lower potential output growth in the future World Economic Outlook, April 2006 International Monetary Fund. that will shape the landscape of the global economy over the medium term as businesses and households seek to repair the damage. policymakers is to ensure a smooth transition of demand while maintaining supports that promote growth and employment. There is also a need to contain and reduce public debt and repair and reform the financial sector. This issue of the WEO also explores two other key challenges in the wake of the Great Recession: how to spur job creation in the face of likely high and persistent unemployment in advanced economies and how countries that previously ran large current account surpluses or deficits can promote growth by rebalancing external and domestic demand.
