last 30 years the amount of new information on assessment and treatment has been astounding The field has moved from a point where many considered the condition untreatable to the current position that it may be curable in some cases and that all persons with this condition can benefit from treatment Intervening with school age children continues to be a major focus of assessment or intervention However expanding the ages of those receiving more attention from younger children to older adults is becoming more prevalent The consensus is that intensive treatment at the earliest recognized age is critical and that many adults evince symptoms of the disorder and warrant care The field is full of many proposed treatments many of which offer promise but no data Thus a book on evidence based assessments and interventions across the life span should be of value in helping to sort out the more credible interventions as defined by the research and what methods have the best support Given the popularity of the topic and the vast array of potential assessments and treatments available this volume will be aimed at delineating what the researchers have shown has the best evidence to support particular methods International Review of Research in Mental Retardation is now available online at ScienceDirect full text online of volumes 23 onwards Elsevier book series on ScienceDirect gives multiple users throughout an institution simultaneous online access to an important compliment to primary research Digital delivery ensures users reliable 24 hour access to the latest peer reviewed content The Elsevier book series are compiled and written by the most highly regarded authors in their fields and are selected from across the globe using Elsevier's extensive researcher network For more information about the Elsevier Book Series on ScienceDirect Program please visit <http://www.info.sciencedirect.com/bookseries>
