Understanding Vision Theory Models And Data:

Understanding Vision Li Zhaoping, 2014-05-08 While the field of vision science has grown significantly in the past three decades there have been few comprehensive books that showed readers how to adopt a computational approach to understanding visual perception along with the underlying mechanisms in the brain *Understanding Vision* explains the computational principles and models of biological visual processing and in particular of primate vision The book is written in such a way that vision scientists unfamiliar with mathematical details should be able to conceptually follow the theoretical principles and their relationship with physiological anatomical and psychological observations without going through the more mathematical pages For those with a physical science background especially those from machine vision this book serves as an analytical introduction to biological vision It can be used as a textbook or a reference book in a vision course or a computational neuroscience course for graduate students or advanced undergraduate students It is also suitable for self learning by motivated readers in addition for those with a focused interest in just one of the topics in the book it is feasible to read just the chapter on this topic without having read or fully comprehended the other chapters In particular Chapter 2 presents a brief overview of experimental observations on biological vision Chapter 3 is on encoding of visual inputs Chapter 5 is on visual attentional selection driven by sensory inputs and Chapter 6 is on visual perception or decoding Including many examples that clearly illustrate the application of computational principles to experimental observations *Understanding Vision* is valuable for students and researchers in computational neuroscience vision science machine and computer vision as well as physicists interested in visual processes

Understanding Vision Zhaoping Li, 2014 Vision science has grown hugely in the past decades but there have been few books showing readers how to adopt a computational approach to understanding visual perception along with the underlying mechanisms in the brain This book explains the computational principles and models of biological visual processing and in particular primate vision *Understanding Vision* Roger J. Watt, 1991 Bridging the gap between psychology and computer science this book explains the relationship between studies of machine and human vision Stressing the idea of the competent visual system it gives a formal treatment of vision Exercises accompany the chapters

Cognition Cornelia I. Bargmann, Daphne Bavelier, David Stewart, Terrence Joseph Sejnowski, Bruce Stillman, 2014 The Proceedings of the 79th Symposium capture many of the tremendous discoveries currently being made by neuroscientists and psychologists working on cognitive processes at scales varying from the molecular to circuit to whole brain and theoretical studies Major advances in understanding cognitive function including learning memory language and decision making are being made through the application of powerful new techniques and approaches The scientific results discussed in this volume shed light on many areas of normal brain function but also offer novel insights into the treatment of psychiatric neurological and neurodegenerative diseases This volume includes state of the art neurobiological research at genetic molecular cellular circuit and whole brain resolution Additional chapters address

computational neuroscience behavioral and psychophysical studies and evolutionary comparative neuroscience The Conversations included in this volume are based on interviews conducted during the Symposium and offer a broader anecdotal perspective on this fascinating subject by many of the world's leading cognitive neuroscientists The Symposium Proceedings provides an integrative overview of the current state of the field as well as a glimpse into the emerging connections between molecular cellular circuit mechanisms and higher brain function by leading authorities in the field
