Aka,2017-04-26

The book examines the issues of sustainability in general. It addresses various socioeconomic determinants of ecological footprints in different world's nations, regions, and cultures. Major socioeconomic determinants of ecological footprints are fleshed out using Comparative Model Analysis and rigorous Multiple Regression Analysis. The study exposes the inequitable distribution of the world's ecological footprints and also heightens the concern about ecological imbalances and overshoots. It explains how sustainable development can be promoted and achieved in regional, national, and local jurisdictions. The study provides information that will likely help various governments and policy makers determine if a given nation, region, or culture is on a sustainable path. It helps government leaders, planners, policy makers, and even students of sustainability make a difference in mitigating the effects of various environmental stressors. If this book makes people and policy makers in different countries, regions, and cultures think globally but act locally, then the objectives are well served.

The Future of Life Edward O. Wilson, 2003-03-11. Eloquent, practical, and wise, this book by one of the world's most important scientists and two-time Pulitzer Prize winner should be read and studied by anyone concerned with the fate of the natural world. It makes one thing clear: we know what we do, and we have a choice. The New York Times Book Review. E. O. Wilson assesses the precarious state of our environment, examining the mass extinctions occurring in our time and the natural treasures we are about to lose forever. Yet rather than eschewing doomsday prophesies, he spells out a specific plan to save our world while there is still time. His vision is a hopeful one as economically sound as it is environmentally necessary.

A Thousand Shades of Green Peter Winsemius, Ulrich Guntram, 2013-06-17. What does it mean for the environment is a strategic corollary of almost any significant business decision today, and companies must take seriously their responsibilities to regulators, customers, employees, and the wider society. *A Thousand Shades of Green* is aimed at business leaders in need of a clear understanding of the key corporate environmental challenges and the insight and vision to meet them. Imperatives such as engaging stakeholders and developing partnerships, understanding the policy-making process, forming corporate responses, and drafting environmental management strategies with the promise of genuine competitive advantage for their companies. Drawing on their extensive consultancy experience with some of the most progressive companies around the world, the authors examine why and how businesses must confront the rapidly developing agenda set by environmental constraints and social and regulatory pressure. They identify the corporate environmental challenge with that of change management and advocate a recognition that there is no single strategy or endgame applicable to all companies; there are a thousand shades of green. Only by pursuing thorough, reflective, consistent, competitive, and proactive strategies will businesses be able to avoid being embroiled in costly and complex reactive approaches.

Environmental and Human Health Eddie N. Laboy-Nieves, Mattheus F.A. Goosen, Evens Emmanuel, 2010-09-28. Many countries experience lack of harmony among economic development, environmental management, and human health. As a consequence, public health, the integrity of ecosystems, and the efforts to reach environmental sustainability have been adversely affected. The complexity, frequency, and

magnitude of those impacts is increasingly parallel to the t **Reducing Global Poverty** Barry B. Hughes, Mohammad T. Irfan, Haider Khan, Krishna B. Kumar, Dale S. Rothman, Jose Roberto Solorzano, 2015-12-22 This is the first volume in an ambitious new series Patterns of Potential Human Progress inspired by the UN Millennium Development Goals MGDs and other initiatives to improve the global condition The first and most fundamental of these goals reducing poverty worldwide is the focus of this book Using the large scale computer program called International Futures IFs developed over three decades at the prestigious University of Denver Graduate School of International Studies this book explores the most extensive set of forecasts of global poverty ever made providing a wide range of scenarios based on an authoritative array of data It transcends the 1 a day baseline measure of poverty and probes important concepts like income poverty gaps and relative poverty The forecasts are long term looking 50 years into the future far beyond the 2015 date set out by the MDGs They are geographically rich spanning the entire globe and drilling down to the country level including one of the most important global focal points India The poverty forecasts in this book and all the volumes in the series are fully integrated in perspective across a wide range of human development arenas including demographics economics politics agriculture energy and the environment Full of colorful thoughtfully designed graphs tables maps and other visual presentations of data and forecasts this large format inaugural volume ensures that the Patterns of Potential Human Progress series will become an indispensable resource for every development professional student professor library and indeed country around the world

Models in Ecosystem Science Charles Draper William Canham, Jonathan J. Cole, William K. Lauenroth, 2003-11-30 Quantitative models are crucial to almost every area of ecosystem science They provide a logical structure that guides and informs empirical observations of ecosystem processes They play a particularly crucial role in synthesizing and integrating our understanding of the immense diversity of ecosystem structure and function Increasingly models are being called on to predict the effects of human actions on natural ecosystems Despite the widespread use of models there exists intense debate within the field over a wide range of practical and philosophical issues pertaining to quantitative modeling This book which grew out of a gathering of leading experts at the ninth Cary Conference explores those issues The book opens with an overview of the status and role of modeling in ecosystem science including perspectives on the long running debate over the appropriate level of complexity in models This is followed by eight chapters that address the critical issue of evaluating

ecosystem models including methods of addressing uncertainty Next come several case studies of the role of models in environmental policy and management A section on the future of modeling in ecosystem science focuses on increasing the use of modeling in undergraduate education and the modeling skills of professionals within the field The benefits and limitations of predictive versus observational models are also considered in detail Written by stellar contributors this book grants access to the state of the art and science of ecosystem modeling **Grasslands and Climate Change** David J. Gibson, Jonathan A. Newman, 2019-03-21 A comprehensive assessment of the effects of climate change on global grasslands and the mitigating role that ecologists can play **Loss of Biodiversity** Sharon L. Spray, Karen Leah McGlothlin, 2003 Loss of Biodiversity introduces readers to the important concepts for understanding the environmental challenges and consequences of the declining diversity of life on the planet Contributions from scientists and academics in the social sciences and humanities provide readers with an initial tool kit for understanding the concepts central to their disciplinary perspective and the multi dimensional aspects of the loss of biodiversity **Latin America and the Caribbean** , 2001

Ecology of Indonesian Papua Part Two Andrew J. Marshall, Bruce M. Beehler, 2012-06-26 The Ecology of Papua provides a comprehensive review of current scientific knowledge on all aspects of the natural history of western Indonesian New Guinea Designed for students of conservation environmental workers and academic researchers it is a richly detailed text dense with biogeographical data historical reference and fresh insight on this complicated and marvelous region We hope it will serve to raise awareness of Papua on a global as well as local scale and to catalyze effective conservation of its most precious natural assets New Guinea is the largest and highest tropical island and one of the last great wilderness areas remaining on Earth Papua the western half of New Guinea is noteworthy for its equatorial glaciers its vast forested floodplains its imposing central mountain range its Raja Ampat Archipelago and its several hundred traditional forest dwelling societies One of the wildest places left in the world Papua possesses extraordinary biological and cultural diversity Today Papua s environment is under threat from growing outside pressures to exploit its expansive forests and to develop large plantations of oil palm and biofuels It is important that Papua s leadership balance economic development with good resource management to ensure the long term well being of its culturally diverse populace **Ecology, Environmental Science & Conservation** Singh J.S., Singh S.P. & Gupta S.R., 2014 Over the years the scope of our scientific understanding and technical skills in ecology and environmental science have widened significantly with increasingly greater emphasis on societal issues In this book an attempt has been made to give basic concepts of ecology environmental science and various aspects of natural resource conservation The topics covered primarily deal with environmental factors affecting organisms adaptations biogeography ecology of species populations and species interactions biotic communities and ecosystems environmental pollution stresses caused by toxics global environmental change exotic species invasion conservation of biodiversity ecological restoration impact assessment application of remote sensing and geographical information system for analysis and management of

natural resources and approaches of ecological economics The main issues have been discussed within the framework of sustainability considering humans as part of ecosystems and recognising that sustainable development requires integration of ecology with social sciences for policy formulation and implementation **Forests in International Law** Anja Eikermann, 2015-02-05 This book investigates the potential need for an international convention on forests and establishes a multifunctional concept of forests as a cornerstone for international forest regulation Accordingly it examines a variety of international instruments pertaining directly or indirectly to forests and explores their entangled fragmented nature While contending that the lack of consistency in international law impedes the development of a stand alone international forest convention at the same time it argues that the lessons learned from fragmentation as well as from the history of forest discourse on the international level open up new options for the regulation of forests in international law based on new concepts of coordination and cooperation
