Conceptual Modeling - ER 2005 Christian Kop, Heinrich C. Mayr, John Mylopoulos, Oscar Pastor, 2005-11-15 Conceptual modeling is fundamental to any domain where one must cope with complex real world situations and systems because it fosters communication between technology experts and those who would benefit from the application of those technologies Conceptual modeling is the key mechanism for understanding and representing the domains of information system and database engineering but also increasingly for other domains including the new virtual environments and the information system that support them The importance of conceptual modeling in software engineering is evidenced by recent interest in model driven architecture and extreme programming Conceptual modeling also plays a prominent role in various technical disciplines and in the social sciences The Annual International Conference on Conceptual

Modeling referred to as the ER Conference provides a central forum for presenting and discussing current research and applications in which conceptual modeling is the major emphasis. In keeping with this tradition, ER 2005, the 24th ER Conference, spanned the spectrum of conceptual modeling, including research and practice in areas such as theories of concepts and ontologies underlying conceptual modeling, methods and tools for developing and communicating conceptual models, and techniques for transforming conceptual models into effective information system implementations. Moreover, new areas of conceptual modeling, including Semantic Web services and the interdependencies of conceptual modeling with knowledge-based logical and linguistic theories and approaches, were also addressed.
