1: Lamarckism (Theory of Acquired Characters)

Lamarckism was proposed by Jean-Baptiste de Monet Lamarck in the year 1744-1829. This theory was based on the principle that all the physical changes occurring in an individual during its lifetime are inherited by its offspring. This idea is also called the **inheritance of acquired characteristics**.

Lamarck based his theory on two observations:

- Individuals lose characteristics they do not require (or use) and develop characteristics that are useful.
- Individuals inherit the traits of their ancestors.

Experience, Explanation and Faith Anthony O'Hear, 2013-05-02 In this book Anthony O'Hear examines the reasons that are given for religious faith His approach is firmly within the classical tradition of natural theology but an underlying theme is the differences between the personal Creator of the Bible or the Koran and a God conceived of as the indeterminate ground of

everything determinate Drawing on several religious traditions and on the resources of contemporary philosophy specific chapters analyse the nature of religious faith and of religious experience They examine connections between religion and morality and religion and human knowledge the cosmological teleological and ontological arguments process thought and the problem that evil presents for religion The final chapter returns to the inherently dogmatic nature of religious faith and concludes that rational people should look beyond religion for the fulfilment of their spiritual needs The Nature of Explanation in Social Sciences Rajesh Ranjan Tiwari,2023-07-07 This book provides a comprehensive overview of the nature of explanations as given in both natural and social sciences It discusses models of explanation adopted in natural and social sciences The author also elaborates upon naturalistic and anti naturalistic views and other types of explanations such as functional purposive etc in social science The volume elaborates upon themes like bridge principle functional explanation purposive explanation teleological explanation prediction methodological individualism methodological collectivism illocutionary redescription principle of action and dispositional explanations to understand whether the explanations given in the realm of social sciences are the same or different from the explanations that are given in the field of natural sciences This introductory book is a must read for students and scholars of philosophy of science logic science and technology studies social sciences and philosophy in general *Philosophy of Science* Mario Bunge,2017-09-04 Originally published as Scientific Research this pair of volumes constitutes a fundamental treatise on the strategy of science Mario Bunge one of the major figures of the century in the development of a scientific epistemology describes and analyzes scientific philosophy as well as discloses its philosophical presuppositions This work may be used as a map to identify the various stages in the road to scientific knowledge Philosophy of Science is divided into two volumes each with two parts Part 1 offers a preview of the scheme of science and the logical and semantical tool that will be used throughout the work The account of scientific research begins with part 2 where Bunge discusses formulating the problem to be solved hypothesis scientific law and theory The second volume opens with part 3 which deals with the application of theories to explanation prediction and action This section is graced by an outstanding discussion of the philosophy of technology Part 4 begins with measurement and experiment It then examines risks in jumping to conclusions from data to hypotheses as well as the converse procedure Bunge begins this mammoth work with a section entitled How to Use This Book He writes that it is intended for both independent reading and reference as well as for use in courses on scientific method and the philosophy of science It suits a variety of purposes from introductory to advanced levels Philosophy of Science is a versatile informative and useful text that will benefit professors researchers and students in a variety of disciplines ranging from the behavioral and biological sciences to the physical sciences Scientific Realism and the Rationality of Science Howard Sankey,2008 Emphasizes the epistemological aspects of scientific realism and contains a solution to the problem of induction that rests on an appeal to the principle of uniformity of nature *Aspects of Scientific Explanation* Carl Gustav Hempel,1970 **Some Uses of the**

Concept of Causality in Theories of Explanation ... Bernard P. Dauenhauer, 1968 *The Didactics of Mathematics: Approaches and Issues* Bernard R Hodgson, Alain Kuzniak, Jean-Baptiste Lagrange, 2016-07-10 This book the outcome of a conference organised in 2012 in Paris as a homage to Mich le Artigue is based on the main component of this event However it offers more than a mere reflection of the conference in itself as various well known researchers from the field have been invited to summarize the main topics where the importance of Artigue s contribution is unquestionable Her multiple interest areas as a researcher involved in a wider community give to this volume its unique flavour of diversity Mich le Artigue ICMI 2013 Felix Klein Award CIAEM 2015 Luis Santal Award is without doubt one of the most influential researchers nowadays in the field of didactics of mathematics This influence rests both on the quality of her research and on her constant contribution since the early 1970s to the development of the teaching and learning of mathematics Observing her exemplary professional history one can witness the emergence the development and the main issues of didactics of mathematics as a specific research field *Neurofunctional Prudence and Morality* Marcus Arvan, 2020-01-29 Philosophers across many traditions have long theorized about the relationship between prudence and morality Few clear answers have emerged however in large part because of the inherently speculative nature of traditional philosophical methods This book aims to forge a bold new path forward outlining a theory of prudence and morality that unifies a wide variety of findings in neuroscience with philosophically sophisticated normative theorizing The author summarizes the emerging behavioral neuroscience of prudence and morality showing how human moral and prudential cognition and motivation are known to involve over a dozen brain regions and capacities He then outlines a detailed philosophical theory of prudence and morality based on neuroscience and lived human experience The result demonstrates how this theory coheres with and explains the behavioral neuroscience showing how each brain region and capacity interact to give rise to prudential and moral behavior *Neurofunctional Prudence and Morality A Philosophical Theory* will be of interest to philosophers and psychologists working in moral psychology neuroethics and decision theory Chapter 3 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution Non Commercial No Derivatives 4 0 license *Models of Scientific Development and the Case of Nuclear Magnetic Resonance* Henk Zandvoort, 2012-12-06 From the nineteen sixties onwards a branch of philosophy of science has come to development called history oriented philosophy of science This development constitutes a reaction on the then prevailing logical empiricist conception of scientific knowledge The latter was increasingly seen as suffering from insurmountable internal problems like e g the problems with the particular observational theoretical distinction on which it drew In addition the logical empiricists general approach was increasingly criticized for two external shortcomings Firstly the examples of scientific knowledge that the logical empiricists were focusing on were con sidered as too simplistic to be informative on the nature of real life science Secondly it was felt that the attention of these philosophers of science was restricted to the static aspects of scientific knowledge while neglecting its developmental aspects History

oriented philosophy of science has taken up the challenge implicit in the latter two criticisms i.e. to develop accounts of science that would be more adequate for understanding the development of real life science. One of the more successful products of this branch of philosophy of science is Lakatos's theory of scientific development sometimes called the methodology of scientific research programmes. This theory conceives science as consisting of so-called research programmes developing in time and competing with each other over the issue which one generates the best explanations of the phenomena that they address.

China's Relations with Arabia and the Gulf 1949-1999 Mohamed Mousa Mohamed Ali Bin Huwaidin, 2003-09-02 This book provides a detailed analysis of China's foreign policy towards the Gulf and Arabian peninsula region from the establishment of the People's Republic of China in 1949 to the end of the 20th century. Based on extensive original research it looks at the relations between China and each of the countries of the region over the entire period. It demonstrates that two key factors have shaped China's foreign policy with the region: China's relations with the United States and the Soviet Union and China's drive to increase its economic ties with the countries of the region especially after becoming a net importer of oil in the early 1990s.

Philosophy of Science Henry van Laer, Henry J. Koren, 2023-07-24 In the first place I want to point out that the term science is not restricted here to the physical sciences as is usually done in English and French scientific literature but is used in a very broad sense namely for science in general as well as each and any special science no matter what its nature be including theology and philosophy If in particular chapters restrictions are made in the use of the term this will always be justified and wherever possible indicated by the addition of a qualifying noun Although the term science is used in a very broad sense a large number of the examples illustrating the text will be borrowed from the physical sciences The reason is first of all that because of his former studies the author is most familiar with this domain but also that the physical sciences often reveal most clearly the typical features of science **German Mergers & Acquisitions in the USA** Bernd
