The Changing Alpine Treeline David R. Butler, George P. Malanson, Stephen J. Walsh, Daniel B. Fagre, 2009-03-13 The alpine treeline ecotone ATE is an area of transition high on mountains where closed canopy forests from lower elevations give way to the open alpine tundra and rocky expanses above Alpine tundra is an island biome and its ecotone with forest is subject to change and like oceanic islands alpine tundra is subject to invasion or the upward advance of treeline The invasion of tundra by trees will have consequences for the tundra biome as invasion does for other island flora and fauna To examine the invasibility of tundra we take a plant's eye view wherein the local conditions become extremely important Among these local conditions we find geomorphology to be exceptionally important We concentrate on aspects of microtopography and microgeomorphology and microclimate because these are the factors that matter from the plant's eye view but we pay attention to multiple scales At coarse scales snow avalanches and debris flows are widespread and create disturbance treelines whose elevation is well below those controlled by climate At medium scales turf banked terraces create tread and riser topography that is a difficult landscape for a tree seedling to survive upon because of exposure to wind dryness and impenetrable surfaces At fine scales turf exfoliation of the fronts of turf banked risers and boulders offer microsites where tree seedlings may find shelter and are able to gain a foothold in the alpine tundra conversely however surfaces of needle ice pans and frost heaving associated with miniature patterned ground production are associated with sites inimical to seedling establishment or survival We explicitly consider how local scale processes propagate across scales into landscape patterns The objective of this book is to examine the controls on change at alpine treeline All the papers are focused on work done in Glacier National Park Montana USA Although any one place is limiting we are able to examine the alpine treeline here in some detail and an advantage is that the treeline ecotone in Glacier National Park is quite variable in itself due to the underlying variability in geomorphology at multiple scales This book will provide insights into an important ecological phenomenon with a distinctly geomorphic perspective The editors collectively have over 100 years of experience in working in geomorphology biogeography and ecology They also have each worked on research in Glacier National Park for several decades The book will be a reference for a variety of professionals and students both graduate and undergraduate with interests in Physical Geography Geomorphology Ecology and Environmental Science Because of the importance of the alpine treeline ecotone for recreation and aesthetic interests in mountain environments wildland and park managers will also use this book Subject matter

geomorphology at alpine treeline Expertise of contributors each editor brings over 25 years of experience in studies of ecotones and geomorphology and collectively over 100 years of experience in Glacier National Park Changing alpine treeline examines climate change **Recent Reports** ,1985 General Technical Report RMRS ,1998 *Targhee National Forest Ecological Unit Inventory* ,1999 **Wildland Fire in Ecosystems** ,2000 **Mountains and Plains** Dennis H. Knight, George P. Jones, William A. Reiners, William H. Romme, 2014-01-01 Many changes some discouraging others hopeful have occurred in the Rocky Mountain region since the first edition of this widely acclaimed book was published Wildlife habitat has become more fragmented once abundant sage grouse are now scarce and forest fires occur more frequently At the same time wolves have been successfully reintroduced and new approaches to conservation have been adopted For this updated and expanded Second Edition the authors provide a highly readable synthesis of research undertaken in the past two decades and address two important questions How can ecosystems be used so that future generations benefit from them as we have How can we anticipate and adapt to climate changes while conserving biological diversity *General Technical Report INT.* ,1995
