Time Change Time Travel Series 1:

Analytical Procedures for Determining the Impacts of Reliability Mitigation Strategies, 2013 Reliability of transport especially the ability to reach a destination within a certain amount of time is a regular concern of travelers and shippers The definition of reliability used in this research is how travel time varies over time The variability can apply to the travel times observed over a road segment during a specific time slice e g 3 to 6 p m over a fairly long period of time say a year The variability can also pertain to the travel times of repeated trips made by a person or a truck between a given origin and destination Agencies are increasingly aware of the issue of reliability although the transportation industry as a whole as yet lacks a firm understanding of the causes and solutions to failures of reliability As the agenda for the SHRP 2 research on travel time reliability took shape it became clear a fundamental study was required to be able to talk about travel time reliability in a meaningful way Foreword *Transportation Decision Making* Kumares C. Sinha, Samuel Labi, 2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming which can help transportation professionals to optimize their investment choices The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation Topics covered include Developing performance measures for evaluation estimating travel demand and costing transportation projects Performing an economic efficiency evaluation that accounts for such factors as travel time safety and vehicle operating costs Evaluating a project's impact on economic development and land use as well as its impact on society and culture Assessing a project's environmental impact including air quality noise ecology water resources and aesthetics Evaluating alternative projects on the basis of multiple performance criteria Programming transportation investments so that resources can be optimally allocated to meet facility specific and system wide goals Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment Relevant legislation is discussed and available software for performing evaluations is presented At the end of each chapter readers are provided resources for detailed investigation of particular topics These include Internet sites and publications of international and domestic agencies and research institutions The authors also provide a companion Web site that offers updates data for analysis and case histories of project evaluation and decisionmaking Given that billions of dollars are spent each year on transportation systems in the United States alone and that there is a need for thorough and rational evaluation and decision making for cost effective system preservation and improvement this text should be on the desks of all transportation planners engineers and educators With exercises in every chapter this text is an ideal coursebook for the subject of transportation systems analysis and evaluation **Speculative Wests** Michael K.
