The Yokohama Project:

The Yokohama Project Albert Ferré, Tomoko Sakamoto, Michael Kubo, 2002 The Yokohama Project An interesting building usually has an equally interesting tale to tell an epic embedded in the organization of the massive complex amount of matter used to create the structure This book recounts the story of the Yokokama Project an inventive undulating grass covered ferry terminal that was never meant to be built Asked to produce some material for an architectural journal London based architects Farshid Moussavi and Alejandro Zaera Polo of FOA Foreign Office Architects set themselves a program of entering three competitions through which to explore design ideas they had become interested in When they actually won the second competition for the Yokohama International Port Terminal in Yokohama Japan their plans suddenly changed The Yokohama Project presents a textual and visual replica of the way their winning building was developed over eight years by FOA and a huge team of engineers and researchers in Tokyo and Yokohama Unlike the typical architectural book this one offers no critical texts and no theoretical analyses of the structure instead it aims to rediscover the linearity of the building s creation The reader is thus moved linearly through the following chapters Design Evolution Building Permits Structure Services Finishes Circulation and Final Documents Peppered throughout with detailed plans elevations diagrams and sketches as well as candid snapshots of the design team at work sometimes asleep at and under their desks The Yokohama Project is not only an homage to a building but to the many people who worked on making it real Foreign Office Architects is a pioneering architectural practice founded in London in 1992 It has since expanded to include an office in Japan The principal partners are Farshid Moussavi and Alejandro Zaera Polo both of whom are graduates of Harvard University s Masters in Architecture program and former employees of Rem Koolhaas s OMA Office for Metropolitan Architecture Current projects include a publishing headquarters in Paju City Korea and a park and open air auditorium in Barcelona Spain Completed projects include New Belgo restaurant and Bermondsey Antiques Market in London This past year FOA were among the short listed winners for the competition to design Porto Antico in Genova Italy **The Yokohama Project** ,2002

The New Architectural Pragmatism William S. Saunders, 2007 In response to the contentious process surrounding the selection of a design for the World Trade Center site the use of spectacular buildings to brand cities and institutions and the dizzying transformations of the skylines of Shanghai and Dubai public awareness of architecture and design has perhaps never been higher At the same time architecture itself is undergoing an identity crisis as it confronts fundamental issues the effect of digital technology on design the pervasive impact of global capitalism and whether to embrace or resist popular media and taste The New Architectural Pragmatism collects the most provocative penetrating and influential attempts by leading theorists and practitioners in the field to define what architectural practice should be at the beginning of the twenty first century Written in the aftermath of modernism s utopian impulse and postmodernism s detached playfulness the essays gathered here express and critique a new spirit of cultural and political engagement with contemporary society Interrogating

the architect's social responsibility the contributors deliberate about how much we should ask of architecture and suggest that in the coming century architecture must be at once flexible and robust responsive and self directed Contributors Stan Allen George Baird Lucy Bullivant James Corner Hal Foster Kenneth Frampton K Michael Hays Dave Hickey Robert Levit Evonne Levy Reinhold Martin Jorge Silveti Robert Somol Philippe Starck Roemer van Toorn Sarah Whiting Alejandro Zaera Polo William S Saunders is editor of Harvard Design Magazine and assistant dean for external relations at Harvard University's Graduate School of Design He is the editor of four previous Harvard Design Magazine Readers published by Minnesota

The Smart City and the Co-creation of Value Nobuyuki Tokoro, 2015-11-11 The original point that differentiates this text from otherwise similar texts is that it looks at the building of smart cities from the viewpoint of an interchange of knowledge among companies in different industries or as a shared context in motion and emphasizes that the resulting value becomes a source of new corporate competitive advantage In recent years numerous publications have appeared that analyze smart cities from various perspectives including urban planning and administration network theory and innovation However few are academic texts that approach the subject from the viewpoint of corporate competitive advantage against a theoretical background in management studies as this one does This book is the first full scale academic work to analyze smart cities from the viewpoint of corporate competitive advantage Research into corporate competitive advantage includes the positioning and the resource based views with the former focusing on companies external environment and the latter on their internal resources Although these theories' foci of attention necessarily differ they both developed as tools for analyzing companies' relative merits and their chances of succeeding in the marketplace and they take the common premise that competitive advantage is built through competition among companies In contrast this book sees corporate competitive advantage as arising not through competition but through co creation among companies It differs in its approach from existing theories in thinking that emphasizing co creation over competition enables an analysis that better describes actual conditions when considering smart cities and corporate competitive advantage Put another way when new values arise from attempts to exchange and fuse knowledge expertise and other factors at the place where companies from different industries collaborate these values are surely brought about through co creation among companies Another point regarding this book's original perspective on competitive advantage is its emphasis on the relationship between the creation of social value and competitive advantage The question of the extent to which socially useful values can be created in the markets of the 21st century is closely linked to corporate competitive advantage The issues of building smart cities and corporate competitive advantage are themes that this perspective can firmly grasp This book intends to take up three different projects from among the smart city building developments taking shape in Japan and undertake case studies based on the theoretical framework outlined above The central themes will analyze the mechanism of co creation among companies and the relationship of created value to competitive advantage This analysis aims to demonstrate one model relating to

corporate competitive advantage in the 21st century

Blue Carbon in Shallow Coastal Ecosystems Tomohiro

Kuwae, Masakazu Hori, 2018-09-03 This book presents a comprehensive and innovative understanding of the role of shallow coastal ecosystems in carbon cycling particularly marine carbon sequestration Incorporating a series of forward looking chapters the book combines thorough reviews of the global literature and regional assessments mainly around the Indo Pacific region and Japan with global perspectives to provide a thorough assessment of carbon cycling in shallow coastal systems It advocates the expansion of blue carbon ecosystems mangroves seagrass meadows and salt marshes into macroalgal beds tidal flats coral reefs and urbanized shallow waters demonstrating the potential of these ecosystems as new carbon sinks Moreover it discusses not only topics that are currently the focus of blue carbon studies i e sedimentary carbon stock and accumulation rate but also CO₂ gas exchange between the atmosphere and shallow coastal ecosystems carbon storage in the water column as refractory organic carbon and off site carbon storage Including highly original contributions this comprehensive work inspires research beyond the specific regions covered by the chapters The suite of new concepts and approaches is refreshing and demonstrates that blue carbon research is indeed a vibrant new field of research providing deep insights into neglected aspects of carbon cycling in the marine environment At the same time the book provides guidance for policy makers to deliver benefits to society for example the inclusion of blue carbon as a carbon offset scheme or the Nationally Determined Contribution NDC in the Paris Agreement and also for building resilience in coastal socio ecosystems through better management This book is intended for all those interested in the science and management of coastal ecosystems

Smart Cities and Japan's Energy Transition Maciej M. Sokołowski, Fumio Shimpo, 2025-03-31

This book offers a complex and problem based analysis of the past present and future of smart cities in Japan s energy transition With 92% of Japanese living in urban areas and a goal of achieving net zero greenhouse gas emissions by 2050 Japan s energy future will depend largely on how its cities can become smarter greener and more resilient To reach these ambitions a collective effort is required with actions coming from Tokyo to Kumamoto from Yokohama to Sapporo and throughout dozens of smaller and bigger Japanese urban structures This book addresses the key issues that have emerged or may emerge in various Japanese cities that are pursuing smart energy initiatives The authors examine several issues including international cooperation heating decarbonisation foreign direct investments city planning housing policies and technology related risks in the context of Japan s energy transition Drawing on case studies from different regions of Japan and sectors of Japanese economy significant for reaching carbon neutrality this book will be a valuable resource for all interested in energy transition climate action and smart cities where Japan and Japanese smart cities serve as excellent benchmarks

Japan's Environmental Politics and Governance Yasuo Takao, 2016-11-03

Environmental issues stretch across scales of geographic space and require action at multiple levels of jurisdiction including the individual level community level national level and global level Much of the scholarly work surrounding new approaches to environmental governance tends

to overlook the role of sub national governments but this study examines the potential of sub national participation to make policy choices which are congruent with global strategies and national mandates This book investigates the emerging actors and new channels of Japan s environmental governance which has been taking shape within an increasingly globalized international system By analysing this important new phenomenon it sheds light on the changing nature of Japan s environmental policy and politics and shows how the links between global strategies national mandates and local action serve as an influential factor in Japan s changing structures of environmental governance Further it demonstrates that decision making competencies are shared between actors operating at different levels and in new spheres of authority resulting from collaboration between state and non state actors It highlights a number of the problems challenges and critiques of the actors in environmental governance as well as raising new empirical and theoretical puzzles for the future study of governance over environmental and global issues Finally it concludes that changes in the tiers and new spheres of authority are leading the nation towards an environmentally stable future positioned within socio economic and political constraints Demonstrating that bridging policy gaps between local action national policy and global strategies is potentially a way of reinventing environmental policy this book will be of interest to students and scholars of Environmental Studies

Environmental Politics and Japanese Politics Emerging Urbanity Richard Marshall,2013-09-05 Discussions on the global economy focus on the hyper mobility of capital the possibility of instantaneous transmission of information and money around the globe the centrality of information outputs to our economic systems and emphasise the neutralisation of geography and of places What is ignored however is that even the most advanced information industries need a material infrastructure of buildings and work processes and considerable agglomeration in order to operate in global markets Further the globalisation of economic activity has brought with it not only a vast dispersal of offices and factories but also a growing importance of central functions to manage and coordinate such worldwide networks of activities The development of global urban projects is one manifestation of this move towards centrality in urban situations These large scale urban projects are the result of governments seeking competitive advantage in the global economy They are critical components of a nation s global infrastructure In the booming economies of the Asia Pacific Rim prior to the Asian Economic Crisis these urban developments were seen as key components of national economic policies In their making they require a conscious effort to arrange material infrastructure and reinforce that there is a role for urban design in this making *Emerging Urbanity* is an exploration of this role in nine global urban projects in the Asia Pacific Rim *Smart Grid Standards* Takuro Sato,Daniel M.

Kammen,Bin Duan,Martin Macuha,Zhenyu Zhou,Jun Wu,Muhammad Tariq,Solomon Abebe Asfaw,2015-04-20 A fully comprehensive introduction to smart grid standards and their applications for developers consumers and service providers The critical role of standards for smart grid has already been realized by world wide governments and industrial organizations There are hundreds of standards for Smart Grid which have been developed in parallel by different

organizations It is therefore necessary to arrange those standards in such a way that it is easier for readers to easily understand and select a particular standard according to their requirements without going into the depth of each standard which often spans from hundreds to thousands of pages The book will allow people in the smart grid areas and in the related industries to easily understand the fundamental standards of smart grid and quickly find the building block standards they need from hundreds of standards for implementing a smart grid system The authors highlight the most advanced works and efforts now under way to realize an integrated and interoperable smart grid such as the NIST Framework and Roadmap for Smart Grid Interoperability Standards Release 2.0 the IEC Smart Grid Standardization Roadmap the ISO/IEC's Smart Grid Standards for Residential Customers the ZigBee HomePlug's Smart Energy Profile Specification 2.0 IEEE's P2030 Draft Guide for Smart Grid Interoperability of Energy Technology and Information Technology Operation with the Electric Power System (EPS) and End Use Applications and Loads and the latest joint research project results between the world's two largest economies US and China The book enables readers to fully understand the latest achievements and ongoing technical works of smart grid standards and assist industry utilities vendors academia regulators and other smart grid stakeholders in future decision making The book begins with an overview of the smart grid and introduces the opportunities in both developed and developing countries It then examines the standards for power grid domain of the smart grid including standards for blackout prevention and energy management smart transmission advanced distribution management and automation smart substation automation and condition monitoring Communication and security standards as a whole are the backbone of smart grid and their standards including those for wired and wireless communications are then assessed Finally the authors consider the standards and on going work and efforts for interoperability and integration between different standards and networks including the latest joint research effort between the world's two largest economies US and China A fully comprehensive introduction to smart grid standards and their applications for developers consumers and service providers Covers all up to date standards of smart grid including the key standards from NIST IEC ISO ZigBee IEEE HomePlug SAE and other international and regional standardization organizations The Appendix summarizes all of the standards mentioned in the book Presents standards for renewable energy and smart generation covering wind energy solar voltaic fuel cells pumped storage distributed generation and nuclear generation standards Standards for other alternative sources of energy such as geothermal energy and bioenergy are briefly introduced Introduces the standards for smart storage and plug in electric vehicles including standards for distributed energy resources DER electric storage and E mobility plug in vehicles The book is written in an accessible style ideal as an introduction to the topic yet contains sufficient detail and research to appeal to the more advanced and specialist reader
