Theoretical Experimental Methods Defending Against:

Theoretical and Experimental Methods for Defending Against DDoS Attacks Iraj Sadegh Amiri, Mohammad Reza Khalifeh Soltanian, 2015-11-10 Denial of Service DoS attacks are a form of attack that seeks to make a network resource unavailable due to overloading the resource or machine with an overwhelming number of packets thereby crashing or severely slowing the performance of the resource Distributed Denial of Service DDoS is a large scale DoS attack which is distributed in the Internet Every computer which has access to the Internet can behave as an attacker Typically bandwidth depletion can be categorized as either a flood or an amplification attack Flood attacks can be done by generating ICMP packets or UDP packets in which it can utilize stationary or random variable ports Smurf and Fraggle attacks are used for amplification attacks DDoS Smurf attacks are an example of an amplification attack where the attacker sends packets to a network amplifier with the return address spoofed to the victim's IP address This book presents new research and methodologies along with a proposed algorithm for prevention of DoS attacks that has been written based on cryptographic concepts such as birthday attacks to estimate the rate of attacks generated and passed along the routers Consequently attackers would be identified and prohibited from sending spam traffic to the server which can cause DDoS attacks Due to the prevalence of DoS attacks there has been a lot of research conducted on how to detect them and prevent them The authors of this short format title provide their research results on providing an effective solution to DoS attacks including introduction of the new algorithm that can be implemented in order to deny DoS attacks A comprehensive study on the basics of network security Provides a wide revision on client puzzle theory An experimental model to mitigate distributed denial of service DDoS attacks

Advanced Nanotechnologies for Detection and Defence against CBRN Agents Plamen Petkov, Dumitru Tsiulyanu, Cyril Popov, Wilhelm Kulisch, 2018-05-26 This volume gives a broad overview of advanced technologies for detection and defence against chemical biological radiological and nuclear CBRN agents It provides chapters addressing the preparation and characterization of different nanoscale materials metals oxides glasses polymers carbon based etc and their applications in fields related to security and safety In addition it presents an interdisciplinary approach as the contributors come from different areas of research such as physics chemistry engineering materials science and biology A major feature of the book is the combination of longer chapters introducing the basic knowledge on a certain topic and shorter contributions highlighting specific applications in different security areas

Experimental Philosophy, Rationalism, and Naturalism Eugen Fischer, John Collins, 2015-04-24 Experimental philosophy is one of the most exciting and controversial philosophical movements today This book explores how it is reshaping thought about philosophical method Experimental philosophy imports experimental methods and findings from psychology into philosophy These fresh resources can be used to develop and defend both armchair methods and naturalist approaches on an empirical basis This outstanding collection brings together leading proponents of this new meta philosophical naturalism from within and beyond

experimental philosophy They explore how the empirical study of philosophically relevant intuition and cognition transforms traditional philosophical approaches and facilitates fresh ones Part One examines important uses of traditional armchair methods which are not threatened by experimental work and develops empirically informed accounts of such methods that can potentially stand up to experimental scrutiny Part Two analyses different uses and rationales of experimental methods in several areas of philosophy and addresses the key methodological challenges to experimental philosophy Do its experiments target the intuitions that matter in philosophy And how can they support conclusions about the rights and wrongs of philosophical views Essential reading for students of experimental philosophy and metaphilosophy Experimental Philosophy Rationalism and Naturalism will also interest students and researchers in related areas such as epistemology and the philosophies of language perception mind and action science and psychology

Dynamically Enabled Cyber Defense Lin Yang, Quan Yu, 2021-06-08 The book puts forward dynamically enabled cyber defense technology as a solution to the system homogenization problem Based on the hierarchy of the protected information system entity the book elaborates on current mainstream dynamic defense technologies from four aspects the internal hardware platform software service information data and external network communication It also ascertains their possible evolution routes clarifies their relationship with existing security products and makes macro analyses and discussions on security gain and overall system efficiency of these technologies This book can be used as both a textbook for graduate courses related to electronic information as well as a reference for scientific researchers engaged in relevant research It helps graduate students majoring in electronics and information sciences to gain an understanding in dynamically enabled cyber defense Scientists and engineers specialising in network security research should also find this book to be a useful guide on recent developments in network security

Matter and Method in the Long Chemical Revolution Victor D. Boantz, 2016-05-06 The seventeenth century scientific revolution and the eighteenth century chemical revolution are rarely considered together either in general histories of science or in more specific surveys of early modern science or chemistry This tendency arises from the long held view that the rise of modern physics and the emergence of modern chemistry comprise two distinct and unconnected episodes in the history of science Although chemistry was deeply transformed during and between both revolutions the scientific revolution is traditionally associated with the physical and mathematical sciences whereas modern chemistry is seen as the exclusive product of the chemical revolution This historiographical tension between similarity in form and disparity in historical content of the two events has tainted the way we understand the rise of modern chemistry as an integral part of the advent of modern science Against this background *Matter and Method in the Long Chemical Revolution* examines the role of and effects on chemistry of both revolutions in parallel using chemistry during the chemical revolution to illuminate chemistry during the scientific revolution and vice versa Focusing on the crises and conflicts of early modern chemistry and their retrospectively labeled losing parties the author traces patterns of continuity in matter theory and experimental method from

Boyle to Lavoisier and reevaluates the disciplinary relationships between chemists mechanists and Newtonians in France England and Scotland Adopting a unique approach to the study of the scientific and chemical revolutions and to early modern chemical thought and practice in particular the author challenges the standard revolution centered history of early modern science and reinterprets the rise of chemistry as an independent discipline in the long eighteenth century

Philosophy Within Its Proper Bounds Edouard Machery, 2017 In *Philosophy Within Its Proper Bounds* Edouard Machery argues that resolving many traditional and contemporary philosophical issues is beyond our epistemic reach and that philosophy should re orient itself toward more humble but ultimately more important intellectual endeavors Any resolution to many of these contemporary issues would require an epistemic access to metaphysical possibilities and necessities which Machery argues we do not have In effect then *Philosophy Within Its Proper Bounds* defends a form of modal skepticism The book assesses the main philosophical method for acquiring the modal knowledge that the resolution of modally immodest philosophical issues turns on the method of cases that is the consideration of actual or hypothetical situations which cases or thought experiments describe in order to determine what facts hold in these situations Canvassing the extensive work done by experimental philosophers over the last 15 years Edouard Machery shows that the method of cases is unreliable and should be rejected Importantly the dismissal of modally immodest philosophical issues is no cause for despair many important philosophical issues remain within our epistemic reach In particular reorienting the course of philosophy would free time and resources for bringing back to prominence a once central intellectual endeavor conceptual analysis

Error and Uncertainty in Scientific Practice Marcel Boumans, Giora Hon, Arthur Petersen, 2015-10-06 Assessment of error and uncertainty is a vital component of both natural and social science This edited volume presents case studies of research practices across a wide spectrum of scientific fields It compares methodologies and presents the ingredients needed for an overarching framework applicable to all

Anatomy of a Train Wreck Ruth Leys, 2024-12-05 A history of priming research that analyzes the field s underlying assumptions and experimental protocols to shed new light on a contemporary crisis in social psychology In 2012 a team of Belgian scientists reported that they had been unable to replicate a canonical experiment in the field of psychology known as priming The original experiment performed by John Bargh in the nineties had purported to show that words connoting old age unconsciously influenced or primed research subjects causing them to walk more slowly When subsequent researchers could not replicate these results Nobel winning psychologist Daniel Kahneman warned of a train wreck looming if Bargh and

his colleagues could not address doubts about their work. Since then the inability to replicate other well known priming experiments has helped precipitate an ongoing debate over what has gone wrong in psychology raising fundamental questions about the soundness of research practices in the field. *Anatomy of a Train Wreck* offers the first detailed history of priming research from its origins in the early 1980s to its recent collapse. Ruth Leys places priming experiments in the context of contemporaneous debates over not only the nature of automaticity but also the very foundations of social psychology. While these latest discussions about priming have largely focused on methodology including sloppy experimental practices, inadequate statistical methods and publication bias, Leys offers a genealogy of the theoretical expectations and scientific paradigms that have guided and motivated priming research itself. Examining scientists' intellectual strategies, their responses to criticism and their assumptions about the nature of subjectivity, *Anatomy of a Train Wreck* raises crucial questions about the evidence surrounding unconscious influence and probes the larger stakes of the replication crisis in psychology's status as a science.

The External World and Our Knowledge of It Fred Wilson, 2008-10-25 David Hume is often considered to have been a sceptic, particularly in his conception of the individual's knowledge of the external world. However, a closer examination of his works gives a much different impression of this aspect of Hume's philosophy, one that is due for a thorough scholarly analysis. This study argues that Hume was in fact a critical realist in the early twentieth century sense, a period in which the term was used to describe the epistemological and ontological theories of such philosophers as Roy Wood Sellars and Bertrand Russell. Carefully situating Hume in his historical context, that is relative to Aristotelian and rationalist traditions, Fred Wilson makes important and unique insights into Humean philosophy. Analyzing key sections of the *Treatise the Enquiry* and the *Dialogues concerning Natural Religion*, Wilson offers a deeper understanding of Hume by taking into account the philosopher's theories of the external world. Such a reading, the author explains, is not only more faithful to the texts but also reinforces the view of Hume as a critical realist in light of twentieth century discussions between externalism and internalism and between coherentists and foundationalists. Complete with original observations and ideas, this study is sure to generate debates about Humean philosophy, critical realism and the limits of perceptual knowledge.

The Last Thirty Seconds David K. Stumpf, 2024-09-09 In March 1983, as the world's superpowers continued aggressively stockpiling nuclear weapons, President Ronald Reagan described his vision for a world no longer confronted with the concept of mutually assured destruction. A year later the Strategic Defense Initiative was established, followed soon after by the creation of the Strategic Defense Initiative Organization (SDIO). The SDIO was tasked with the development and coordination of missile technologies designed for the strategic defense against civilization's most dangerous invention, one that carried with it the threat of nuclear destruction: intercontinental ballistic missiles. In *The Last Thirty Seconds: A Brief History of the Evolution of Hit to Kill Technology*, David K. Stumpf details the development of one of many possible solutions for ballistic missile defense, commonly known as hit to kill. Hit to kill is a nonnuclear technique using kinetic energy rather

than explosives to destroy reentry vehicles carrying chemical biological or nuclear warheads It is the centerpiece of the United States current ballistic missile defense systems and has proven invaluable in the conflict between Ukraine and Russia as well as in the ongoing conflict with the Houthi rebels in the Red Sea While much of the subject remains classified this detailed study will be welcomed for its substantial references and the inclusion of newly declassified material Attraction and Hostility Albert Pepitone, **Commercial and Pre-Commercial Cell Detection Technologies for Defence Against Bioterror** L.M.
