Index Medicus, 2001 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Intermediate Physics for Medicine and Biology** Russell K. Hobbie, Bradley J. Roth, 2007-09-09 This text bridges the gap between introductory physics and its application to the life sciences It is intended for advanced undergraduates and beginning graduate students The Fourth Edition is updated to include new findings discussion of stochastic processes and expanded coverage of anatomy and biology The text includes many problems to test the student's understanding and chapters include useful bibliographies for further reading Its minimal prerequisites and wide coverage make it ideal for self study The fourth edition is updated throughout to reflect new developments Topology in Molecular Biology Michael I. Monastyrsky, 2006-10-26 Providing a course of modern topology intended for biologists and physicists this book presents a class of results in molecular biology for which topological methods and ideas are important These include the large scale conformation properties of DNA computational methods the structure of proteins and other problems in molecular biology *Subject Guide to Children's Books in Print 1997* Bowker Editorial Staff, R R Bowker Publishing, 1996-09 **Stochastic Narrow Escape in Molecular and Cellular Biology** David Holcman, Zeev Schuss, 2015-09-08 This book covers recent developments in the non standard asymptotics of the mathematical narrow escape problem in stochastic theory as well as applications of the narrow escape problem in cell biology The first part of the book concentrates on mathematical methods including advanced asymptotic

methods in partial equations and is aimed primarily at applied mathematicians and theoretical physicists who are interested in biological applications The second part of the book is intended for computational biologists theoretical chemists biochemists biophysicists and physiologists It includes a summary of output formulas from the mathematical portion of the book and concentrates on their applications in modeling specific problems in theoretical molecular and cellular biology Critical biological processes such as synaptic plasticity and transmission activation of genes by transcription factors or double stranded DNA break repair are controlled by diffusion in structures that have both large and small spatial scales These may be small binding sites inside or on the surface of the cell or narrow passages between subcellular compartments The great disparity in spatial scales is the key to controlling cell function by structure This volume reports recent progress on resolving analytical and numerical difficulties in extracting properties from experimental data biophysical models and from Brownian dynamics simulations of diffusion in multi scale structures General physics, relativity, astronomy and mathematical physics and methods ,1977 *Rivista internazionale di fisica* *Bowker's Medical Books in Print* ,1975 *WHO library acquisitions* ,1974 Includes List of periodicals in the World Health Organization Library *Books in Print Supplement* ,1982 *Directory of Selected Chinese Universities and Colleges Open to Foreign Students* Binsan Xiong,1993 *Medical and Health Care Books and Serials in Print* ,1986 *Subject Guide to Books in Print* ,1997 **Catalogs of Courses** University of California, Berkeley,1995 Includes general and summer catalogs issued between 1878 1879 and 1995 1997
