Theory And Design Of Terabit Optical Fiber Transmission Systems:

Theory and Design of Terabit Optical Fiber Transmission Systems Stefano Bottacchi, 2014-10-02 This comprehensive modular treatment of the challenging issues involved in very high speed optical transmission systems contains all the theory and practical design criteria required to optimise transmission system design Each chapter covers the theoretical modelling of a given system chapters are well supported by real world worked examples and accompanied by MATLAB code and receiver design examples Critical analysis and comparison of engineering solutions is presented to make clear the principles underlying system performance optimisation and a broad range of transmission systems is discussed including the status and performance demands of the Terabit systems now entering the next generation market Blending theoretical and practical considerations for high speed fibre optic systems design this is an indispensable reference for all forward looking professionals and researchers in optical communications

Coherent Optical LiDAR Stefano Bottacchi, 2025-02-05 This book provides an insight into the coherent optical LiDAR system starting from the fundamental operation of the polarization diversity coherent optical transceiver widely used in field deployed Terabit optical communication systems The author first defines LiDAR i e Light Detection and Ranging as a complex machine designed to measure the distance and the velocity of the target object in a two dimensional imaging The book provides a detailed analysis of the electrical engineering aspects of the Code Modulated CM LiDAR developing a thorough theory and modeling of coherent optical signals and noise sources involved in the detection of the received signal by means of the integrated coherent optical receiver The author then shows that the target detection of the CM LiDAR is based on the cross correlation process between the transmitted and received coded signals after the target reflection To this end large part of the book is devoted to the theory of the cross correlation process with noise and the related probability of detection The intent of this book is to provide a reference to the reader for the inside understanding of the coherent optical LiDAR toward an optimum design approach Presents coherent optical LiDAR systems which measure distance and velocity of the target in a two dimensional imaging Illustrates how LiDAR offers an ideal solution for low cost and large scale integration Merges LiDAR specifications and optical coherent technology through a unique approach
