Donoso,2015-09-04 The main focus of this book is sustainable management of water resources in a changing climate The book also addresses the question of how to define and measure the sustainability of Integrated Water Resources Management IWRM The sustainability of IWRM is an important issue when planning and or developing policies that consider the impact of climate change water governance and ecohydrology in the context of a more holistic approach to ensure sustainable management of water resources Sustainable IWRM is more about processes and relatively little systematic or rigorous work has been done to articulate what components are the most essential to ensure the ongoing sustainability of IWRM efforts The chapters cover topics including global prospective of IWRM allocation of environmental flows in IWRM ecohydrology water resources and environmental sustainability climate change and IWRM IWRM and water governance including social economic public health and cultural aspects climate change resiliency actions related to water resources management sustainability and tools in support of sustainability for IWRM This book will be of interest to researchers practitioners water resources managers policy and decision makers donors international institutions governmental and non governmental organizations educators as well as graduate and undergraduate students It is a useful reference for Integrated Water Resources Management IWRM ecohydrology climate change impact and adaptations water governance environmental flows geographic information system and modeling tools water and energy nexus and related topics *Facing the*

Challenges of Water Governance Simon Porcher,Stéphane Saussier,2018-11-19 Access to water is one of the most pressing global issues of the twenty first century particularly when set against the background of a rapidly growing global population This book provides a cutting edge comprehensive overview of the challenges facing water governance and regulatory choices The recently adopted Sustainable Development Goals set forward an ambitious agenda of providing universal access to good quality water supply and sanitation services within a financially constrained environment however the various peculiarities of each country regarding water governance makes it difficult to identify and implement the best practices and benchmarks Drawing together empirical studies from countries around the world the editors and contributors combine extensive data to review the individual challenges facing each country from the supervision of autonomous regulatory bodies to the question of centralization and the influence of local utility companies This pioneering and practical volume will be of interest and value

not only to students and scholars of water governance but also to practitioners and regulators

Water Governance, Policy and Knowledge Transfer Cheryl De Boer, Joanne Vinke-de Kruijf, Gül Özerol, Hans Th. A. Bressers, 2013-05-29

In an increasingly global community of researchers and practitioners new technologies and communication means have made the transfer of policies from one country or region to another progressively more prevalent There has been a lot of attention in the field of public administration paid to policy transfer and institutional transplantation This book aims to create a better understanding of such transfers in the water management sector These include the adoption of modern water management concepts such as integrated water resources management and forms of water governance which are strongly promoted and sometimes also imposed by various international organizations Transfers also occur within the scope of development aid or for the purpose of creating business opportunities In addition many research organisations consultancies and governmental agencies are involved in cross border work The purpose of this book is therefore to present practical examples of the transfer of modern water management from one locality to another and to critically discuss the transferability of policy and governance concepts by analysing the contextual needs and factors Case studies are included from North America Europe the Middle East and Asia It is argued that in many cases context matters in water management and that there is no panacea or universal concept that can be applied to all countries or regions with different political economic cultural and technological contexts Yet it is also shown that some countries are facing pressing and similar water management issues that cut across national borders and hence the transfer of knowledge may be beneficial

Towards a More Sustainable Water Future Danielle Lindamood, 2017

Humans and the environment in which we live are deeply connected to one another These interconnections allow for many positive benefits and are foundational to our ability to live on Earth but also pose many challenges These challenges are often complex and can lead to negative effects on humans and the environment alike especially under the pressures of multiple drivers including climate change The United Nations created the Sustainable Development Goals SDGs to address many of these complex problems through global regional and local action The connection between water resources and humanity and the resulting challenges is a potent example of problems the SDGs aim to confront Particularly SDG 6 seeks to ensure sustainable access to clean water and sanitation for all with targets for water quality efficiency management cooperation capacity building and ecosystem health While the SDG 6 vision and targets are admirable little is known about how to enhance the achievability of this goal especially considering sustained efforts to address water challenges around the world Particularly it is unclear if pre existing water governance mechanisms such as institutions policies rules and practices will be

able to facilitate SDG 6 achievement In order to better understand how those involved in water governance can help enhance the achievability of SDG 6 at multiple scales a study using qualitative research methods was performed using India as a case study This included interviews and focus groups to explore three research objectives 1 current water governance structures and paradigms 2 capture experiences around success and failure in water projects and 3 synthesize learnings for insights into enhancing the achievability of SDG 6 Additionally the concept of the water governance landscape is proposed as a tool to more systematically understand trends in water governance particularly assessing the structural functional and normative dimensions This research concludes the water governance landscape in India is not currently poised to facilitate SDG 6 achievement by 2030 but there are many positive trends toward betterment in policies and programs for water governance Findings of this research regarding enhancement of SDG 6 achievement include the value of determining contextual enabling and hindering factors for water goals While the subject matter of specific enabling and hindering factors was not surprising analyzing trends in the suite of enabling and hindering factors highlighted five broad thematic areas important to enhancing SDG 6 achievement practical considerations power relations knowledge capacity building policy design and institutional design Additionally the development of better coordinated water governance processes the use of diagnostic tools and concepts and the value of addressing contextual water challenges is discussed A few generalizable results include the importance of understanding and addressing water sustainability challenges in particular as well as the importance of scale and context Overall through better understanding the water governance systems under investigation delineating processes for what helps and hinders SDG 6 achievability and putting those processes into practice well clarity for the pathways toward a more sustainable water future can be attained

Water Politics Farhana Sultana, Alex Loftus, 2019-09-06

Scholarship on the right to water has proliferated in interesting and unexpected ways in recent years This book broadens existing discussions on the right to water in order to shed critical light on the pathways pitfalls prospects and constraints that exist in achieving global goals as well as advancing debates around water governance and water justice The book shows how both discourses and struggles around the right to water have opened new perspectives and possibilities in water governance fostering new collective and moral claims for water justice while effecting changes in laws and policies around the world In light of the 2010 UN ratification on the human right to water and sanitation shifts have taken place in policy legal frameworks local implementation as well as in national dialogues Chapters in the book illustrate the novel ways in which the right to water has been taken up in locations drawn globally highlighting the material politics that are enabled and negotiated through this framework in order to address ongoing water insecurities This book reflects the urgent need to take stock of debates in light of new concerns around post neoliberal political developments the challenges of the Anthropocene and climate change the transition from the Millennium Development Goals MDGs to the Sustainable Development Goals SDGs as well as the mobilizations around the right to water in the global North This book is essential reading for scholars

and students of water governance environmental policy politics geography and law It will be of great interest to policymakers and practitioners working in water governance as well as the human right to water and sanitation
