Aronica,2018-06-05 Global Flood Hazard Subject Category Winner PROSE Awards 2019 Earth Science Selected from more than 500 entries demonstrating exceptional scholarship and making a significant contribution to the field of study Flooding is a costly natural disaster in terms of damage to land property and infrastructure This volume describes the latest tools and technologies for modeling mapping and predicting large scale flood risk It also presents readers with a range of remote sensing data sets successfully used for predicting and mapping floods at different scales These resources can enable policymakers public planners and developers to plan for and respond to flooding with greater accuracy and effectiveness Describes the latest large scale modeling approaches including hydrological models 2 D flood inundation models and global flood forecasting models Showcases new tools and technologies such as Aqueduct a new web based tool used for global assessment and projection of future flood risk under climate change scenarios Features case studies describing best practice uses of modeling techniques tools and technologies Global Flood Hazard is an indispensable resource for researchers consultants practitioners and policy makers dealing with flood risk flood disaster response flood management and flood mitigation

Dynamics and Predictability of Large-Scale, High-Impact Weather and Climate Events Jianping Li,Richard Swinbank,Richard Grotjahn,Hans Volkert,2016-03-24 Based largely on an International Commission on Dynamical Meteorology ICDM workshop this timely volume written by leading researchers in the field covers a range of important research issues related to high impact weather and extreme climate events Dynamical linkages between these extremes and various atmospheric and ocean phenomena are examined including Atlantic Multidecadal North Atlantic and Madden Julian Oscillations Annular Modes tropical cyclones and Asian monsoons This book also examines the predictability of high impact weather and extreme climate events on multiple time scales Highlighting recent research and new advances in the field this book enhances understanding of dynamical and physical processes associated with these events to help managers and policy makers make informed decisions to manage risk and prevent or mitigate disasters It also provides guidance on future research directions in atmospheric science meteorology climate science and weather forecasting for experts and young scientists

Hydrometeorology Kevin Sene,2015-12-09 This second edition explores some of the latest techniques used to provide forecasts for a wide range of water related applications in areas such as floods droughts water resources and environmental impacts The practical uses can range from decisions on whether to issue a flood warning

through to providing longer term advice such as on when to plant and harvest crops or how to operate reservoirs for water supply and hydropower schemes It provides an introduction to the topic for practitioners and researchers and useful background for courses in areas such as civil engineering water resources meteorology and hydrology As in the first edition the first section considers topics such as monitoring and forecasting techniques demand forecasting and how forecasts are interpreted when issuing warnings or advice Separate chapters are now included for meteorological and catchment monitoring techniques allowing a more in depth discussion of topics such as weather radar and water quality observations The chapters on meteorological and hydrological forecasting now include a greater emphasis on rainfall forecasting and ensemble and probabilistic techniques Regarding the interpretation of forecasts an updated chapter discusses topics such as approaches to issuing warnings and the use of decision support systems and risk based techniques Given the rapid pace of development in flash flood forecasting techniques flash floods and slower responding riverine floods are now considered in separate chapters This includes more detail on forecasting floods in large river basins and on methods for providing early warnings of debris flows surface water flooding and ice jam and dam break floods Later chapters now include more information on developing areas such as environmental modelling and seasonal flow forecasting As before examples of operational systems are provided throughout and the extensive sets of references which were a feature of the first edition have been revised and updated Key themes floods droughts meteorological observations catchment monitoring meteorological forecasts hydrological forecasts demand forecasts reservoirs water resources water quality decision support data assimilation probabilistic forecasts Kevin Sene is a civil engineer and researcher with wide experience in flood risk management water resources and hydrometeorology He has previously published books on flood warning forecasting and emergency response and flash floods Springer 2008 2013

An Introduction to Clouds Ulrike Lohmann, Felix Löffelholz, Fabian Mahrt, 2016-06-23 An Introduction to Clouds provides a fundamental understanding of clouds ranging from cloud microphysics to the large scale impacts of clouds on climate On the microscale phase changes and ice nucleation are covered comprehensively including aerosol particles and thermodynamics relevant for the formation of clouds and precipitation At larger scales cloud dynamics mid latitude storms and tropical cyclones are discussed leading to the role of clouds on the hydrological cycle and climate Each chapter ends with problem sets and multiple choice questions that can be completed online and important equations are highlighted in boxes for ease of reference Combining mathematical formulations with qualitative explanations of underlying concepts this accessible book requires relatively little previous knowledge making it ideal for advanced undergraduate and graduate students in atmospheric science environmental sciences and related disciplines

Communicating Climate Science - HC 254 Great Britain. Parliament. House of Commons. Select Committee on Science and Technology, Great Britain: Parliament: House of Commons: Science and Technology Committee, Andrew Miller, 2014-04-02 The Government is failing to clearly and effectively communicate climate science to the public There is little evidence of co ordination amongst Government government agencies and public bodies on communicating climate science despite various policies at national and regional level to mitigate and adapt to climate change The mandate to act on climate can only be maintained if the electorate are convinced that the Government is acting on the basis of strong scientific evidence Ministers therefore need to do more to demonstrate that is the case and consistently reflect the Government approach in all their communications especially with the media The report also criticises the BBC for its reporting on the issue It points out that BBC News teams continue to make mistakes in their coverage of climate science by giving opinions and scientific fact the same weight The BBC is called to develop clear editorial guidelines for all commentators and presenters on the facts of climate that should be used to challenge statements from either side of the climate policy debate that stray too far from the scientific facts It is important that climate science is presented separately from any subsequent policy response Government should work with the learned societies and national academies to develop a source of information on climate science that is discrete from policy delivery comprehensible to the general public and responsive to both current developments and uncertainties in the science

Weather & Climate Services for the Energy Industry Alberto Troccoli, 2018-01-03 This open access book showcases the burgeoning area of applied research at the intersection between weather and climate science and the energy industry It illustrates how better communication between science and industry can help both sides By opening a dialogue scientists can understand the broader context for their work and the energy industry is able to keep track of and implement the latest scientific advances for more efficient and sustainable energy systems Weather Climate Services for the Energy Industry considers the lessons learned in establishing an ongoing discussion between the energy industry and the meteorological community and how its principles and practises can be applied elsewhere This book will be a useful guiding resource for research and early career practitioners concerned with the energy industry and the new field of research known as energy meteorology
