Eliminating waste in software projects: Effective knowledge management by using web based collaboration technology
Frederik Dahlke, 2008-04-10 Inhaltsangabe Abstract Today in a typical software project people do not document at all or invest a large amount of time to create documentation which at the end proves to be not useful or undiscoverable for others The goal of documentation is to conserve knowledge and make this knowledge accessible for others thereby easing collaboration However this goal is rarely achieved The whole process of producing documentation and searching for valuable information is highly ineffective and means a lot of wasted time Often in a shorthand approach Word Excel and Powerpoint files are used for documentation Among these documents information is not interconnected As a consequence relevant information is hard to find Full text searches take a long time and deliver poor results Imagine searching all documents of a file server of a medium cooperation using the Windows Explorer search functionality The search will probably run several hours and hardly deliver any useful results If any information is found it is hard to tell if the document is up to date who changed the document last and what was changed There is no automated mechanism to inform interested people about updates on any document or information Another approach is using proprietary knowledge management technology and collaboration software like knowledge repositories In the late nineties companies started to implement knowledge management strategies with heavy use of technology The problem herein is that people have to be trained to use the knowledge management technology learn and understand the underlying principles and additionally the handling of specific software If the knowledge management technology is complex it imposes an entry barrier Using knowledge management technology will then be a burden for a software development team Since the pressure in a software development is high it is unlikely that a team will be willing to invest much time for learning the technology and hence the pay off will never be

realized Furthermore if the basic principles and processes of a chosen technological approach turn out to be inadequate for a specific situation there is often no chance to adapt the knowledge management technology quickly This finally can lead to a situation that the technology is not used at all because at the end it is easier for workers to simply ask someone else they know Aim of this Book This book will show if and how web technology can be used in *Books, Bytes and Business* Bill Martin,Xuemei Tian,2016-04-08 How are businesses responding to global changes in markets driven by changes in technology Whatever the industry the trends are familiar globalization and the rise of industrial conglomerates mergers and acquisitions the networking of businesses and markets outsourcing and shifts in the distribution of resources and production all reflected in the emergence of new players new products and services and new forms of competition As arguably the first knowledge based business book publishing provides an ideal setting for the study of challenge and opportunity The industry is currently experiencing fierce levels of competition extreme financial pressures restructuring and the threat of technology induced obsolescence Added to these are the challenges posed by new and potential entrants to the market the emergence of new products and services new ways of doing business including trading in virtual markets and the vulnerability of traditional business models The suitability of book publishing as a context for researching the emergence of knowledge based business becomes all too apparent Through combining primary research with secondary analysis drawn from the relevant literatures *Books Bytes and Business* is both a readable and informative account of business in the knowledge based economy
