Flexibility, Mobility and the Labour Market George S. Callaghan, 2018-12-07 First published in 1997 Politicians of all shades argue that the labour market should be more flexible and workers more mobile But what does this mean in reality How flexible and mobile are workers likely to be Is there an ideological base to the language of flexibility These are some of the issues covered in this book Data from a large factory and office is used to argue that the macro labour market consists of non competitive work groups where strongly held views and values represent a substantial barrier to simplistic definitions of flexibility and mobility The analysis takes place in three chapters dealing with recruitment for work skills used in work and perceptions of different types of work and workers The findings suggest that non economic forces such as institutional social historical and political phenomena strongly influence the creation of separate work cultures Furthermore it is argued that the reason for differences between work groups being articulated in a defensive fashion reflects the climate of fear in the labour market where flexibility is associated with a loss of the often limited power control and influence workers have over their position in the labour market

Routledge Library Editions: Labour Economics Various, 2021-07-29 The 13 volumes in this set originally published between 1920 and 1991 draw together research by leading academics in the area of labour economics and provides a rigorous examination of related key issues The volumes examine housing and labour markets labour supply and labour migration This set will be of particular interest to students of Economics and Business Studies

Theories of labour market segmentation Ray Loveridge, A.L. Mok, 2012-12-06 The objectives of this book are to review and develop a framework of key analytical concepts in the field of labour market segmentation to develop and test these concepts against available data to indicate weaknesses in the data in the light of the analysis to offer a critique of manpower policies in some European countries in the light of the foregoing analysis and to indicate areas of further research The authors hope that this survey of the literature and the comments that accompany it will prove useful to policy makers and students alike The authors would

like to acknowledge the role of the Directorate General for Social Affairs of the European Community Brussels in initiating and supporting the production of this volume of criticism and discussion We have especially appreciated the role of David White on whose advice we came to rely in directing our critique upon the application of segmental theory to matters of labour market policy Others whose help and advice we have relied on are John Morley also of the European Community Peta Small who typed the several drafts and our respective wives and families whose encouragement and discreet silences enabled us to get past the nth draft
