Volitional Brain Towards A Neuroscience Of Freewill:

The Volitional Brain Benjamin Libet, Anthony Freeman, Keith Sutherland, 2000-06-08 It is widely accepted in science that the universe is a closed deterministic system in which everything can ultimately be explained by purely physical causation And yet we all experience ourselves as having the freedom to choose between alternatives presented to us we are in the driving seat The puzzling status of volition is explored in this issue by a distinguished body of scientists and philosophers

Models of the Self Shaun Gallagher, Jonathan Shear, 1999 A comprehensive reader on the problem of the self as seen from the perspectives of philosophy development psychology robotics cognitive neuroscience psychopathology semiotics phenomenology and contemplative studies all focused on a keynote paper Downward Causation and the Neurobiology of Free Will Nancey Murphy, George F.R. Ellis, Timothy O'Connor, 2009-09-30 How is free will possible in the light of the physical and chemical underpinnings of brain activity and recent neurobiological experiments How can the emergence of complexity in hierarchical systems such as the brain based at the lower levels in physical interactions lead to something like genuine free will The nature of our understanding of free will in the light of present day neuroscience is becoming increasingly important because of remarkable discoveries on the topic being made by neuroscientists at the present time on the one hand and its crucial importance for the way we view ourselves as human beings on the other A key tool in understanding how free will may arise in this context is the idea of downward causation in complex systems happening coterminously with bottom up causation to form an integral whole Top down causation is usually neglected and is therefore emphasized in the other part of the book's title The concept is explored in depth as are the ethical and legal implications of our understanding of free will This book arises out of a workshop held in California in April of 2007 which was chaired by Dr Christof Koch It was unusual in terms of the breadth of people involved they included physicists neuroscientists psychiatrists philosophers and theologians This enabled the meeting and hence the resulting book to attain a rather broader perspective on the issue than is often attained at academic symposia The book includes contributions by Sarah Jayne Blakemore George F R Ellis Christopher D Frith Mark Hallett David Hodgson Owen D Jones Alicia Juarrero J A Scott Kelso Christof Koch Hans K ng Hakwan C Lau Dean Mobbs Nancey Murphy William Newsome Timothy O Connor Sean A Spence and Evan Thompson Free Will, Neuroethics, Psychology and Theology Geran F. Dodson, 2020-10-06 The topic of human free will has received more attention in the past several years due to the important discoveries of neuroscience but no consensus of opinion is evident in related disciplines The traditional approach to understanding free will in philosophy employs conceptual analysis to determine whether humans have freedom of choice Theology affirms that every person has free choice although God is somehow behind all human decisions Evolutionary psychology points to human behavior as the product of biological processes and antecedent events And neuroethics attempts to define what it means to be a thinking moral agent by investigating how neurons in the brain and chemical interactions combine to produce conscious actions An assessment and evaluation of these various positions is given

in light of the evidence The issue of whether a person can be held morally responsible for their actions hinges on whether those actions originate from free will or are the result of determinism Theology makes assumptions of the existence of an absolute deity that has a hand in human decision making but there is no agreement regarding the nature of that intervention Recent scientific discoveries confront traditionally held religious beliefs and necessitate the creation of a new theology and articles of faith

Free Will and Consciousness Gregg D. Caruso, 2012-02-23 In recent decades with advances in the behavioral cognitive and neurosciences the idea that patterns of human behavior may ultimately be due to factors beyond our conscious control has increasingly gained traction and renewed interest in the age old problem of free will In this book Gregg D Caruso examines both the traditional philosophical problems long associated with the question of free will such as the relationship between determinism and free will as well as recent experimental and theoretical work directly related to consciousness and human agency He argues that our best scientific theories indeed have the consequence that factors beyond our control produce all of the actions we perform and that because of this we do not possess the kind of free will required for genuine or ultimate responsibility It is further argued that the strong and pervasive belief in free will which the author considers an illusion can be accounted for through a careful analysis of our phenomenology and a proper theoretical understanding of consciousness Indeed the primary goal of this book is to argue that our subjective feeling of freedom as reflected in the first person phenomenology of agentive experience is an illusion created by certain aspects of our consciousness

Free Will Nicholaus Rescher, 2013-05-02 Few philosophical issues have had as long and elaborate a history as the problem of free will which has been contested at every stage of the history of the subject The present work practices an extensive bibliography of this elaborate literature listing some five thousand items ranging from classical antiquity to the present

Physicalism and Mental Causation Sven Walter, Heinz-Dieter Heckmann, 2003 This book presents a range of essays on the conceptual foundations of physicalism mental causation and human agency Physicalism the thesis that everything there is in the world including human minds is constituted by basic physical entities has dominated the philosophy of mind during the last few decades Yet there is no generally accepted definition for most of the core notions of physicalism including fundamental notions such as causation determination realization or even physicalism itself This lack of an unanimous conceptual foundation for the physicalist agenda impedes the solution of more specific problems in the philosophy of mind for instance problems pertaining to mental causation and human agency As of yet a comprehensive philosophical reflection on various key concepts and how they relate to the more specific problems physicalism attempts to solve is still missing This book presents a range of essays written by established and leading authors in the field on the conceptual foundations of physicalism and its interconnections with philosophical problems concerning mental causation and human agency

Care of the Mentally Disordered Offender in the Community Alec Buchanan, Lisa Wootton, 2017-10-12 This new edition provides readers with a fresh updated guide to the latest developments in the social context management and

treatment of offenders in mental health care *Bioethics and the Brain* Walter Glannon, 2007 Our ability to map and intervene in the structure of the human brain is proceeding at a very quick rate Advances in psychiatry neurology and neurosurgery have given us fresh insights into the neurobiological basis of human thought and behavior Technologies like MRI and PET scans can detect early signs of psychiatric disorders before they manifest symptoms Electrical and magnetic stimulation of the brain can non invasively relieve symptoms of obsessive compulsive disorder depression and other conditions resistant to treatment while implanting neuro electrodes can help patients with Parkinsons and other motor control related diseases New drugs can help regenerate neuronal connections otherwise disrupted by schizophrenia and similar diseases All these procedures and drugs alter the neural correlates of our mind and raise fascinating and important ethical questions about their benefits and harms They are in a sense among the most profound bioethical questions we face since these techniques can touch on the deepest aspects of the human mind free will personal identity the self and the soul This is the first single author book on what has come to be known as neuroethics Walter Glannon uses a philosophical framework that is fully informed by cutting edge neuroscience as well as contemporary legal cases such as Terri Schiavo to offer readers an introduction to this fascinating topic He starts by describing the state of the art in neuroscientific research and treatment and gives the reader an up to date picture of the brain Glannon then looks at the ethical implications of various kinds of treatments such as whether or not brain imaging will end up changing our views on free will and moral responsibility whether patients should always be told that they are at future risk for neurological diseases if erasing unconscious emotional memories implicated in depression can go too far if forcing behavior modifying drugs or surgery on violent offenders can ever be justified the implications of drugs that enhance cognitive abilities and how to define brain death and the criteria for the withdrawal of life support While not exhaustive Glannons work addresses a wide range of fascinating issues and his pathbreaking work should appeal to philosophers psychiatrists neurologists neurosurgeons radiologists psychologists and bioethicists

Mechanical Choices Michael S. Moore, 2020 This book assays how the remarkable discoveries of contemporary neuroscience impact upon our conception of ourselves and our responsibility for our choices and our actions Dramatic and indeed revolutionary changes in how we think of ourselves as agents and as persons are commonly taken to be the implications of those discoveries of neuroscience Indeed the very notions of responsibility and of deserved punishment are thought to be threatened by these discoveries Such threats are collected into four groupings 1 the threat from determinism that neurosciences shoes us that all of our choices and actions are caused by events in the brain that precede choice 2 the threat from epiphenomenalism that our choices are shown by experiment not to cause the actions that are the objects of such choice but are rather mere epiphenomena co effects of common causes in the brain 3 the threat from reductionist mechanism that we and everything we value is nothing but a bunch of two valued switches going off in our brains and 4 the threat from fallibilism 5 that we are not masters in our own house because we lack the privileged knowledge

of our own minds needed to be such masters The book seeks to blunt such radical challenges while nonetheless detailing how law morality and common sense psychology can harness the insights of an advancing neuroscience to more accurately assign moral blame and legal punishment to the truly deserving
