1.) Vocabulary:

- Leaching** – the movement of surface water into rock or soil through capillary and pore spaces.
- Bed Load** – the part of a stream's load of solid material that is made up of sediment too large to be carried in suspension.
- Delta** – an accumulation of sediment formed where a stream enters a lake or ocean.
- Divide** – an imaginary line that separates the drainage basins of one stream from another.
- Porosity** – the percentage of the total amount of rock or soil that consists of pore spaces.
- Permeability** – a material's ability to release a fluid.
- Sinkhole** – a depression produced in a region where groundwater has removed soluble rock.
- Artesian Well** – any formation in which groundwater rises to its own static pressure.
- Well** – a hole bored into the zone of saturation.
- Transpiration** – atoms absorb water and release it into the atmosphere.
- Capacity** – the maximum load a stream can carry.
- Floodplain** – the water-logged cutting of a stream eventually producing a flat valley floor.

- 2.) **Where do the springs form?** Naturally flowing ground water reaches the surface of the Earth.
- 3.) **What is a major cause of floods?** Heavy spring melting of snow, heavy rainfall over a long time.
- 4.) **How do canyons form?** Hollowed out by erosion from underground streams.
- 5.) **What is the base level of a stream?** The lowest level of a stream where it flows into another, larger body of water.
- 6.) **What is the gradient of a stream?** The slope of a stream.
- 7.) **Which US river has the largest drainage basin?** Mississippi.
- 8.) **How are sinkholes formed?** Areas where ground water has removed the rock.
- 9.) **How are geysers formed?** A hot spring where water boils out intermittently due to a build up of pressure under the ground.
- 10.) **How is the water cycle balanced?** Explain. The amount of water in the air from evaporation and transpiration equals the amount of water that condenses and falls back to Earth as precipitation.
- 11.) **What is the discharge of a stream?** How does it increase? How much water a stream can move in one second over a certain distance. Increase speed or depth of the stream.
- 12.) **A steep gradient causes the discharge to be _____.** Increased.
- 13.) **What are the different types of loads that a stream can carry?** Solution – stuff that's dissolved in the water; suspension – stuff that's floating in the water; rolling/sliding – stuff that's pushed/slotted along the bottom due to the movement of the water.
- 14.) **Explain a drainage basin.** Land area that contributes water to a streamflow; no one in the "watershed" can divert water.
- 15.) **Where do you find groundwater?** Groundwater is found beneath the Earth's surface in soil pore spaces and in the fractures of rock formations.

Water System Science and Policy Interfacing Philippe Quevauviller,2010 Recent discussions among scientists and policy makers have highlighted that knowledge generated by many research and demonstration projects is not reaching policymakers in an efficient way Conversely the consideration of research results by the policy making community is not straightforward and difficulties arise in integrating the latest research developments in legislation The difficulty is enhanced by the fact that the policy making community is not defining its role as client sufficiently well and the dialogue and communication channels are far from ideal to ensure an efficient flow of information An increasing number of experts consider that improvements could be achieved through the development of a science policy interface so that R D results are synthesised in a way to efficiently feed policy implementation and that short medium and long term research needs may be identified This book examines the issue of integrating science into policy with an emphasis on water system knowledge and related policies An important feature of the book is the discussion of science policy interfacing needs illustrated by examples from authors from different countries in relation to water system management This publication is timely in that the science policy interfacing is now identified as a key challenge worldwide with regard to integrated water resource management and therefore the book will be of great interest to scientists water managers and stakeholders Readers will also benefit from a

better understanding of the needs benefits and drawbacks of an established transfer mechanism of scientific outputs to policies
