

19. Cooling Water System, In-line Engine

19.1

Description

19.1.1 General

The engine is cooled by a closed circuit cooling water system, divided into a high temperature circuit (HT) and a low temperature circuit (LT). The cooling water is cooled in a separate central cooler.

The LT circuit is provided with a temperature control valve, which keeps the temperatures at a load dependent level. Thus the temperature rises at low load and the charge air is heated instead of cooled. The heat for this purpose is mainly gained from the oil system via the oil cooler.
