Routledge Handbook of China's Belt and Road Initiative in Eurasia Mher D. Sahakyan, Kevin Lo, 2025-09-15 This handbook critically analyses and examines the impact of China's Belt and Road Initiative BRI geostrategy in Eurasia. Over the last decade the BRI contributed to China becoming an economic and political superpower but the Russo-Ukrainian War brought seismic geopolitical and geoeconomic impacts and a new struggle between great powers. Covering the impact of the BRI and the positions of other great middle and small powers, the ten parts explain the geopolitical and geoeconomic dynamics along the Silk Road Economic Belt's six major economic corridors, implementing case studies on Europe, South Caucasus, Central Asia, Russian Far East, Middle East, South Asia, Southeast Asia, and East Asia. Expert scholars from East, West, North, and South engage with BRI concepts to create a book that will be of interest to policymakers, businesspeople, scholars, and students of area studies, cybersecurity, and digitalisation, economics, security studies, the politics of international trade, foreign policy, global governance, and international organisations.

5G, Cybersecurity and Privacy in Developing Countries Knud Erik Skouby, Prashant Dhotre, Idongesit Williams, Kamal Hiran, 2022-02-10 5G, the emerging technology in mobile communication, is expected to deliver an important and decisive impact on several of the UN's Sustainable Development Goals where universal accessibility to ICTs remains a serious concern. However, cyber security has emerged as a serious challenge, not least because of the increased accessibility and broader usage with associated vulnerability. Developing countries have additional challenges associated with both the expected faster build-up of accessibility and lack of qualified competencies within cyber security. Discussion of these challenges is the overall theme and motivation for this book. Technical topics discussed in the book include 5G in rural networks, critical infrastructures, Open RAN, protection of privacy, cybersecurity, and machine learning, cybersecurity and disaster monitoring.

China's Global Disruption Chi Lo, 2021-01-11 China's Global Disruption: Myths and Reality is the first book to bring world systemic analyses of China into dialog with domestic analyses and in so doing to show how each can challenge or refine the assumptions of the other, ultimately showing that much of the global common sense about China is misinformed.

The Foundations of England; Or, Twelve Centuries of British History (B.C. 55-A.D. 1154): 1066-1154 Sir James Henry Ramsay, Sir James Henry Ramsay of Bamff (10th bart.), 1898

Information Systems Security and Privacy Olivier Camp, Steven Furnell, Paolo Mori, 2017-02-16 This book constitutes the revised selected papers of the Second International Conference on Information Systems Security and Privacy ICISPP 2016 held in Rome, Italy, in February 2016. The 9 full papers presented together with two invited papers were carefully reviewed and selected from a total of 91 submissions. They are dealing with topics such as data and software security, privacy and confidentiality, mobile systems security, biometric authentication, privacy in social media.

Cutting Edge: How Patent-Related Policies and Practices Hamper Innovation in China Dan Prud'homme, 2012-08-22 This study's statistical analysis shows that patent quality and innovation in China deserve improvement and an in depth legal management science and economic analysis in the study shows that various patent related policies and practices actually hamper patent quality and innovation in China Over 50 recommendations for reform are provided The study is divided into four chapters summaries of which are as follows Although China became the world leader in quantity of domestically filed patent applications in 2011 the quality of these patents needs improvement Also while certain innovation in China is rising the country's actual innovation appears over hyped by some sources There appears to be an overly heavy focus on government set quantitative patent targets in China which can hamper patent quality and innovation This overemphasis involves over 10 national level and over 150 municipal provincial quantitative patent targets mostly to be met by 2015 which are also linked to performance evaluations for SoEs Party officials and government ministries universities and research institutes and other entities China has a wide range of other policies many of which are at least partially meant to encourage patents that can actually discourage quality patents and highest quality patents in particular and innovation Examples of these policies include a variety of measures with requirements for indigenous intellectual property rights that are linked to financial incentives many of which are unrelated to government procurement a range of other government provided financial incentives for patent development e.g certain patent filing subsidies inappropriate inventor remuneration rules discriminatory standardization approaches and a wide range of others There are a host of concerns surrounding rules and procedures for patent application review and those for enforcement of patent disputes that can hamper building of quality patents and innovation in China These include concerns about abuse of patent rights difficulties invalidating utility models and a wide range of other issues Science in the Forest, Science in the Past Willard McCarty, Geoffrey E. R.

Lloyd, Aparecida Vilça, 2022-03-29 *Science in the Forest Science in the Past* Further Interdisciplinary Explorations comprises of papers from the second of two workshops involving a group of scholars united in the conviction that the great diversity of knowledge claims and practices for which we have evidence must be taken seriously in their own terms rather than by the yardstick of Western modernity Bringing to bear social anthropology history and philosophy of science computer science classics and sinology among other fields they argue that the use of such dismissive labels as magic superstition and the irrational masks rather than solves the problem and reject counsels of despair which assume or argue that radically alien beliefs are strictly unintelligible to outsiders and can be understood only from within the system in question At the same time they accept that how to proceed to a better understanding of the data in question poses a formidable challenge Key problems identified in the inaugural workshop whose proceedings were published in HAU Journal of Ethnographic Theory 2019 and in HAU Books 2020 provided the basis for asking how obvious pitfalls might be avoided and a new or revised framework within which to pursue these problems proposed The chapters in this book were originally published in *Interdisciplinary Science*

Reviews *MRI of Short- and Ultrashort-T2 Tissues* Jiang Du, Graeme M. Bydder, 2024-02-21 This book comprehensively covers ultrashort echo time UTE zero echo time ZTE and other magnetic resonance imaging MRI acquisition techniques for imaging of short and ultrashort T2 tissues MRI uses a large magnet and radio waves to generate images of tissues in the body The MRI signal is characterized by two time constants spin lattice relaxation time T1 which describes how fast the longitudinal magnetization recovers to its initial value after tipping to the transverse plane and spin spin relaxation time T2 which describes how fast the transverse magnetization decays Conventional MRI techniques have been developed to image and quantify tissues with relatively long T2s However the body also contains many tissues and tissue components such as cortical bone menisci ligaments tendons the osteochondral junction calcified tissues lung parenchyma iron containing tissues and myelin which have short or ultrashort T2s These tissues are invisible with conventional MRI and their MR and tissue properties are not measurable UTE and ZTE type sequences resolve these challenges and make these tissues visible and quantifiable This book first introduces the basic physics of conventional MRI as well as UTE and ZTE type MRI including radiofrequency excitation data acquisition and image reconstruction A series of contrast mechanisms are then introduced and these provide high resolution high contrast imaging of short and ultrashort T2 tissues A series of quantitative UTE imaging techniques are described for measurement of MR tissue properties proton density T1 T2 T2 T1p magnetization transfer susceptibility perfusion and diffusion Finally clinical applications in the musculoskeletal neurological pulmonary and cardiovascular systems are described This is an ideal guide for physicists and radiologists interested in learning more about the use of UTE and ZTE type techniques for MRI of short and ultrashort T2 tissues
