Zooplankton Species Diversity Distribution And Seasonal Dynamics Marine Biology

William S. Johnson, Dennis M. Allen

Zooplankton Species Diversity Distribution And Seasonal Dynamics Marine Biology:

Zooplankton George Kehayias, 2014 Zooplankton organisms comprise very important elements of the structure and function of marine and freshwater ecosystems not only as consumers of primary production but also as food items for juvenile stages of several fish species. Moreover, its sensitivity to both man-made and natural changes makes zooplankton quite suitable for assessing alterations in the trophic dynamics and the ecological state of aquatic ecosystems related to changes in nutrient loading and climate. Multi-scale spatial and temporal relationships between zooplankton variability and environmental heterogeneity are still not satisfactorily understood due to the complexity of the different aquatic ecosystems considering both biotic and abiotic elements. Thus, the ambition of the present edition is to contribute to the understanding of the role of zooplankton by investigating ecological aspects such as the species diversity, their spatial distribution and seasonal dynamics in relation to the environmental influence in various aquatic ecosystems around the world. Topics discussed in this book include the understanding of the role of zooplankton in the transfer of pollutants through trophic food webs, plankton models to explain red tides, spatial patterns of trophic and zooplankton communities in a tropical urban reservoir, the zooplankton variation in five Greek lakes, the zooplankton community in a nuclear power station cooling reservoir, the spatio-temporal dynamics of cladocera and copepoda in the Danube River, the gelatinous zooplankton in the Namibian upwelling region and the zooplankton community in relation to the environmental factors in a solar saltern.

Navigating Climate Change: Impacts on Biodiversity and Ecosystem Resilience Balaji Prasath Barathan, Vijaykumar Velupillai, Santhanam Perumal, Karthikeyan Kannan, 2025-09-26 This contributed volume studies the important associations existing among climate change, biodiversity and human welfare. It gives an all-inclusive explanation of how climate alteration jeopardizes the variety of living organisms on Earth and its impacts on people's welfare. The chapters cover topics such as the effects of climate change on marine and terrestrial ecosystems, range shifts, phenology patterns in species and conservation strategies. Expert contributors provide actionable solutions for mitigating climate change impacts while emphasizing the interactive relationship between biodiversity loss and human well-being. Readers will discover diverse perspectives from renowned scholars who probe into critical questions about sustaining life forms amidst global warming. The book also covers the challenges of providing food for a growing global population amidst climate change and loss in biodiversity. Researchers in environmental science, ecology, sustainability and related fields will benefit from this comprehensive assessment. Policymakers involved in environmental policy making or sustainable development planning will find practical strategies to reduce global warming forces while sustaining biodiversity. This book is also a valuable reference for academicians and professionals aiming to understand the complex interactions between climate change and ecosystem resilience.

Santosh Kumar Sarkar, 2014-11-24 This book is an integrated approach to present a detailed case study in order to address the taxonomic and ecological features of this planktonic ciliates in an iconic tropical mangrove wetland Sundarban To identify each tintinnid species emphasis is given with regards to taxonomic features accompanied by high resolution images This work explores the interaction between man induced stress and the impact of climate change which is threatening the tintinnid biodiversity and suggests for example remedial measures by adopting sound management strategies Tintinnids Protozoa Ciliata Tintinnida are a coherent group ecologically recognized as micro zooplankton They deserve special attention because of their unique biodiversity and their crucial functional role in the marine food chain This is a valuable reference source for students researchers policy planners and coastal managers engaged in the field of marine biology microbial ecology and marine bio resources **In the Wrong Place - Alien Marine Crustaceans: Distribution, Biology and Impacts**

Bella S. Galil, Paul F. Clark, James T. Carlton, 2011-04-01 In The Wrong Place Alien Marine Crustaceans Distribution Biology And Impacts provides a unique view into the remarkable story of how shrimps crabs and lobsters and their many relatives have been distributed around the world by human activity and the profound implications of this global reorganization of biodiversity for marine conservation biology Many crustaceans form the base of marine food chains and are often prominent predators and competitors acting as ecological engineers in marine ecosystems Commencing in the 1800s global commerce began to move hundreds perhaps thousands of species of marine crustaceans across oceans and between continents both intentionally and unintentionally This book tells the story of these invasions from Arctic waters to tropical shores highlighting not only the importance and impact of all prominent crustacean invasions in the world's oceans but also the commercial exploitation of invasive crabs and shrimps Topics explored for the first time in one volume include the

historical roots of man's impact on crustacean biogeography the global dispersal of crabs barnacle invasions insights into the potential scale of tropical invasions the history of the world's most widely cultured shrimp the invasive history and management of red king crabs in Norway Chinese mitten crabs in England and American blue crabs in Europe the evolutionary ecology of green crabs and many other subjects as well touching upon all ocean shores Zooplankton Challenges in a Changing World Luis R. Species Diversity of Animals in Japan Masaharu Motokawa, Hiroshi Kajihara, 2016-11-26 This book summarizes the status quo of the knowledge about the biodiversity in terrestrial freshwater and marine animals that live in Japan Consisting of some 6 800 islands that are arrayed for approximately 3 500 km from north to south the Japanese archipelago has a complex history in a paleogeographic formation process over time and harbors rich flora and fauna This work will contribute to establishing a general biogeographic theory in archipelagoes around continental shelves Facing the ongoing extinction crisis one of the most important tasks for our generation is to bequeath this precious natural heritage to future generations As the first step toward this goal a species list has been compiled through solid steady alpha taxonomic work in each taxon Furthermore the phylogeography and population genetic structure for each species is elucidated for deeper understanding of the local fauna the scientific results of which should be the basis for establishing conservation policies and strategies Also the problem of alien or introduced species is investigated as another threat to the native fauna Each of the 27 chapters is written by the most active specialist leading the field thus readers can acquire up to date knowledge of the animal species diversity and their formation process of Japanese animals in the most comprehensive form available This book is recommended for researchers and students who are interested in species diversity biogeography and phylogeography State of the Arctic Marine Biodiversity Report, 2017 This is the first report of the Circumpolar Biodiversity Monitoring Program CBMP to summarize status and trends in biotic elements in the arctic marine environment The effort has identified knowledge gaps in circumpolar biodiversity monitoring CBMP is the cornerstone program of Conservation of Arctic Flora and Fauna CAFF
