Zoomorphic New Animal Architecture:

Zoomorphic ,2003 *Zoomorphic: New Animal Architecture* Hugh Aldersey-Williams,2003-10-07 A quirky trend of building designs inspired by bizarre animals has emerged in the last few years Why and how has this happened Is it because of new technical possibilities in materials and structural engineering Or is the answer to be found in new social preoccupations in science After a brief look at the historical precedents the book focuses on contemporary examples from around the world and shows the various ways in which the organic animal forms inform the architectural ones Featured architects include Frank Gehry Michael Sorkin and Greg Lynn Zoomorphic ,2003 From Elephants to Skyscrapers: Zoomorphic Architecture Neill Lundgren,2018-04-05 Imagine a structure that looks like a huge elephant where you walk up a spiral staircase hidden in a leg into interior rooms past sun filled windows where you can view the sunset on the expansive horizon What about a big pink pig that once served as a hamburger stand How about visiting a hotel that is designed like a crocodile or a museum that resembles a turtle These oddities of architecture are classified as zoomorphic architecture Zoomorphic architects study the shapes of animals or **New Sacred Architecture** Phyllis Richardson,2004 This timely book reflects an awakening of interest in religious faiths and the emergence of a global exchange of architecture and culture While Spain s Rafael Moneo has recently completed a cathedral in Los Angeles Britain s Thomas Heatherwick is designing a Buddhist temple in Japan John Pawson is working on a Cistercian monastery in the Czech Republic and Richard Meier has completed his Jubilee Church in Rome It seems as one Wallpaper registered pundit commented religion is getting a redesign and the architect s faith is as unimportant as his or her nationality I Looking at ways in which contemporary architects are approaching religious or meditative space this book focuses on churches chapels temples synagogues and mosques that have been built in the last few years and that represent a late twentieth early twenty first century aesthetic , *Structures and Architecture* Paulo J. Cruz,2013-06-27 Although the disciplines of architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of architectural structures and to persua Architecture, Ethics, and the Personhood of Place Gregory Caicco,2007 Architecture and environmental design are among the last professional fields to develop a sustained and nuanced discussion concerning ethics Hemmed in by politics and powerful clients on one side and the often unscrupulous practices of the construction industry on the other environmental designers have been traditionally reluctant to address ethical issues head on And yet the rapid urbanization of the world s population continues to swell into new megacities each less healthy welcoming secure or environmentally sustainable than the next Green carbon reduced and sustainable building practices are important ways architects have recently responded to the symptoms of the crisis but are these efforts really addressing the core issues Taking the Dine Navajo Hogan Song a song used to protect and nourish the personhood of newly constructed dwellings as their inspiration

the architects philosophers poets and other contemporary scholars contributing to this volume demonstrate that a deeper more radical change in our relationship to the built world needs to occur While offering a careful critique of modernist corporate or techno enthralled design practices these essays investigate an alternative relational ecology whose wisdom draws from ancient and often marginalized voices if not the whisperings of the earth itself Contributors include Richard Kearney Alberto Perez Gomez Juhani Pallasmaa Karsten Harries Edward Casey Susan Stewart David Abram Stacy Alaimo Jace and Laura Weaver Philip Sheldrake and Sebnem Yucel Young

Exercises and Solutions in Statistical Theory
Lawrence L. Kupper, Brian. H Neelon, Sean M. O'Brien, 2013-06-24 Exercises and Solutions in Statistical Theory helps students and scientists obtain an in depth understanding of statistical theory by working on and reviewing solutions to interesting and challenging exercises of practical importance Unlike similar books this text incorporates many exercises that apply to real world settings and provides much more thorough solutions The exercises and selected detailed solutions cover from basic probability theory through to the theory of statistical inference Many of the exercises deal with important real life scenarios in areas such as medicine epidemiology actuarial science social science engineering physics chemistry biology environmental health and sports Several exercises illustrate the utility of study design strategies sampling from finite populations maximum likelihood asymptotic theory latent class analysis conditional inference regression analysis generalized linear models Bayesian analysis and other statistical topics The book also contains references to published books and articles that offer more information about the statistical concepts Designed as a supplement for advanced undergraduate and graduate courses this text is a valuable source of classroom examples homework problems and examination questions It is also useful for scientists interested in enhancing or refreshing their theoretical statistical skills The book improves readers comprehension of the principles of statistical theory and helps them see how the principles can be used in practice By mastering the theoretical statistical strategies necessary to solve the exercises readers will be prepared to successfully study even higher level statistical theory

Biomimetics -- Materials, Structures and Processes Petra Gruber, Dietmar Bruckner, Christian Hellmich, Heinz-Bodo Schmiedmayer, Herbert Stachelberger, Ilse C. Gebeshuber, 2011-07-06 The book presents an outline of current activities in the field of biomimetics and integrates a variety of applications comprising biophysics surface sciences architecture and medicine Biomimetics as innovation method is characterised by interdisciplinary information transfer from the life sciences to technical application fields aiming at increased performance functionality and energy efficiency The contributions of the book relate to the research areas Materials and structures in nanotechnology and biomaterials Biomimetic approaches to develop new forms construction principles and design methods in architecture Information and dynamics in automation neuroinformatics and biomechanics Readers will be informed about the latest research approaches and results in biomimetics with examples ranging from bionic nano membranes to function targeted design of tribological surfaces and the translation of natural auditory coding strategies

The Oxford Dictionary of

Architecture James Stevens Curl, Susan Wilson, 2015 With over 6 000 entries this is the most authoritative dictionary of architectural history available

Jakob and MacFarlane Daniel Pavlovits, 2006 The work of Paris based architects Jakob MacFarlane can best be described as the capture and articulation of movement both ethereal and real The firm's focus on movement seeks to mobilise vectors of force to infuse a dynamic sensibility in its work evident in well known projects such as Restaurant Georges at the Pompidou Centre and the Florence Loewy Bookshop both in Paris The firm's sophisticated design schemes are the result of high end digital computer technology used in its design process Jakob MacFarlane's work has been published and exhibited widely and it has been proclaimed as a highly promising collaborative representing the best in French architecture and architectural sensibility of the twenty first century This book explores a variety of Jakob MacFarlane's projects to date both built and unbuilt allowing the reader an insight into the workings of a burgeoning practice

The Patterns of Architecture Mark Garcia, 2009-12-21 Pattern making is ubiquitous in both the natural and manmade world The human propensity for pattern recognition and fabrication is innate Encompassing the historical vernacular and parametric this title explores the creation materialisation and theorisation of some of the world's most significant and spectacularly patterned spaces It investigates how interiors buildings cities and landscapes are patterned through design production and manufacturing use time accident and perception It also brings into focus how contemporary advanced spatial practices and CAD CAM are now pushing patterns to encompass a greater range of structural programmatic aesthetic and material effects and properties Extending patterns far beyond the surface notion of style and decoration Patterns of Architecture assesses how and why the deployment of patterns is shaping the future of architecture Analysed through a multidisciplinary and international series of essays and designs from architects engineers academics researchers and expert professionals in the field Key contributors include Hanif Kara Patrik Schumacher and Alejandro Zaera Polo

Handbook of Research on Visual Computing and Emerging Geometrical Design Tools Amoroso, Giuseppe, 2016-04-11 Visual computing and descriptive geometry are multidisciplinary fields addressing the handling of images 3D models and other computer graphics These ideas are experiencing a revival due to emergent technologies and applications available to developers Based in traditional forms of design and architecture these fields are currently experiencing a bounty of new research based on old principles The Handbook of Research on Visual Computing and Emerging Geometrical Design Tools seeks to add to this knowledge base by considering these technologies from a designer's perspective rather than reiterating the principles of computer science It combines aspects of geometry and representation with emerging tools for CAD generation and visualization while addressing the digital heritage of such fields This book is an invaluable resource for developers students of both graphic and computer generated design researchers and designers

Architect Knows Best Simon Richards, 2016-04-15 The idea that buildings could be used to reform human behaviour and improve society was fundamental to the modernist architecture and planning of people like Walter Gropius Le Corbusier and Jos Luis Sert in the

first half of the 20th century Their proposals for functional zoning multi level transport high rise living and machine inspired aesthetics came under attack from the 1950s onwards and many alternative approaches to architecture and planning emerged It was thought that the environmental determinist strand of the discourse was killed off at this time as well This book argues that it was not but on the contrary that it has deepened and diversified Many of the most prominent architect planners continue to design with a view to improving the behaviour of individual people and of society at large By looking at and interviewing major figures and movements of recent years in Britain Europe and America including L on Krier Peter Eisenman Andr s Duany Jane Jacobs Robert Venturi and Denise Scott Brown it demonstrates the myriad ways that architect planners seek to shape human behaviour through buildings In doing so the book raises awareness of this strand within the discourse and examines its different purposes and manifestations It questions whether it is an ineradicable and beneficial part of architecture and planning or a regrettable throwback to a more authoritarian phase discusses why is it seldom acknowledged directly and whether it could be handled more responsibly and with greater understanding Richards does not provide any simple solutions but in conclusion is critical of architect planners who abuse the rhetoric of social reform simply to leverage their attempts to secure building commissions while being more sympathetic towards those who appear to have a sincere desire to improve society through their buildings

The Architecture Annual 2007-2008. Delft University of Technology Luisa Calabrese, 2009 The theme of this Architecture Annual is Realize in just one year the Faculty of Architecture and its staff in collaboration with internal and external designers were able to realize quite a lot an efficient and successful relocation to a temporary tent camp and a completely new faculty on Julianalaan preface **Biophilic Design** Stephen R. Kellert, Judith Heerwagen, Martin Mador, 2011-09-26 When nature inspires our architecture not just how it looks but how buildings and communities actually function we will have made great strides as a society Biophilic Design provides us with tremendous insight into the why then builds us a road map for what is sure to be the next great design journey of our times Rick Fedrizzi President CEO and Founding Chairman U S Green Building Council Having seen firsthand in my company the power of biomimicry to stimulate a wellspring of profitable innovation I can say unequivocally that biophilic design is the real deal Kellert Heerwagen and Mador have compiled the wisdom of world renowned experts to produce this exquisite book it is must reading for scientists philosophers engineers architects and designers and most especially businesspeople Anyone looking for the key to a new type of prosperity that respects the earth should start here Ray C Anderson founder and Chair Interface Inc The groundbreaking guide to the emerging practice of biophilic design This book offers a paradigm shift in how we design and build our buildings and our communities one that recognizes that the positive experience of natural systems and processes in our buildings and constructed landscapes is critical to human health performance and well being Biophilic design is about humanity s place in nature and the natural world s place in human society where mutuality respect and enriching relationships can and should exist at all levels and should emerge as the norm rather than the exception Written

for architects landscape architects planners developers environmental designers as well as building owners Biophilic Design The Theory Science and Practice of Bringing Buildings to Life is a guide to the theory science and practice of biophilic design Twenty three original and timely essays by world renowned scientists designers and practitioners including Edward O Wilson Howard Frumkin David Orr Grant Hildebrand Stephen Kieran Tim Beatley Jonathan Rose Janine Benyus Roger Ulrich Bert Gregory Robert Berkebile William Browning and Vivian Loftness among others address The basic concepts of biophilia its expression in the built environment and how biophilic design connects to human biology evolution and development The science and benefits of biophilic design on human health childhood development healthcare and more The practice of biophilic design how to implement biophilic design strategies to create buildings that connect people with nature and provide comfortable and productive places for people in which they can live work and study Biophilic design at any scale from buildings to cities begins with a few simple questions How does the built environment affect the natural environment How will nature affect human experience and aspiration Most of all how can we achieve sustained and reciprocal benefits between the two This prescient groundbreaking book provides the answers The Evolution of Designs Philip Steadman,2008-06-03 The Evolution of Designs tells the history of the many analogies that have been made since the end of the eighteenth century between the evolution of organisms and the human production of artefacts especially buildings *The Designer's Atlas of Sustainability* Ann Thorpe,2007-06-20 Designing for sustainability is an innovation shaping both the design industry and design education today Yet architects product designers and other key professionals in this new field have so far lacked a resource that addresses their sensibilities and concerns The Designer s Atlas of Sustainability now explores the basic principles concepts and practice of sustainable design in a visually sophisticated and engaging style The book tackles not only the ecological aspects of sustainable design designers choice of materials and manufacturing processes have a tremendous impact on the natural world but also the economic and cultural elements involved The Atlas is neither a how to manual nor collection of recipes for sustainable design but a compendium of fresh approaches to sustainability that designers can incorporate into daily thinking and practice Illuminating many facets of this exciting field the book offers ideas on how to harmonize human and natural systems and then explores practical options for making the business of design more supportive of long term sustainability An examination of the ethical dimensions of sustainable development in our public and private lives is the theme present throughout Like other kinds of atlases The Designer s Atlas of Sustainability illustrates its subject but it goes far beyond its visual appeal stimulating design solutions for development that cultivates environmental and social conditions that will support human well being indefinitely **Regenerative Urban Design and Ecosystem Biomimicry** Maibritt Pedersen Zari,2018-05-20 It is clear that the climate is changing and ecosystems are becoming severely degraded Humans must mitigate the causes of and adapt to climate change and the loss of biodiversity as the impacts of these changes become more apparent and demand urgent responses These pressures combined with rapid global urbanisation and

population growth mean that new ways of designing retrofitting and living in cities are critically needed Incorporating an understanding of how the living world works and what ecosystems do into architectural and urban design is a step towards the creation and evolution of cities that are radically more sustainable and potentially regenerative Can cities produce their own food energy and water Can they be designed to regulate climate provide habitat cycle nutrients and purify water air and soil This book examines and defines the field of biomimicry for sustainable built environment design and goes on to translate ecological knowledge into practical methodologies for architectural and urban design that can proactively respond to climate change and biodiversity loss These methods are tested and exemplified through a series of case studies of existing cities in a variety of climates Regenerative Urban Design and Ecosystem Biomimicry will be of great interest to students professionals and researchers of architecture urban design ecology and environmental studies as well as those interested in the interdisciplinary study of sustainability ecology and urbanism
