Psychology of Learning William S. Sahakian, 1970

System Theories and A Priori Aspects of Perception J.S. Jordan, 1998-04-21 This book takes as a starting point John Dewey's article The Reflex Arc

Concept in Psychology in which Dewey was calling for in short the utilisation of systems theories within psychology theories of behaviour that capture its nature as a vastly complex dynamic coordination of nested coordinations This line of research was neglected as American psychology migrated towards behaviourism where perception came to be thought of as being both a neural response to an external stimulus and a mediating neural stimulus leading to or causing a muscular response As such perception becomes a question of how it is the perceiver creates neural representations of the physical world Gestalt psychology on the other hand focused on perception itself utilising the term Phenomenological Field a term that elegantly nests perception and the organism within their respective as well as relative levels of organisation With the development of servo mechanisms during the second world war systems theory began to take on momentum within psychology and then in the 1970s William T Powers brought the notion of servo control to perception in his book Behavior The Control of Perception Since then scientists have come to see nature not as linear chain of contingent cause effect relationships but rather as a non linear unpredictable nesting of self referential emergent coordinations best described as Chaos theory The implications for perception are astounding while maintaining the double aspect nature of perception espoused by the Gestalt psychologists In short system theories model perception within the context of a functioning organism so that objects of experience come to be seen as scale dependent psychophysically neutral phenomenological transformations of energy structures the dynamics of which are the result of evolution and therefore a priori to the individual case This a priori homological unity among brain perception and world is revealed through the use of systems theories and represents the thrust of this book All the authors are applying some sort of systems theory to the psychology of perception However unlike Dewey we have close to a century of technology we can bring to bear upon the issue This book should be seen as a collection of such efforts

Theories of Personality David Lester, 2021-04-28 Designed as a text for both graduate and undergraduate students this book originally published in 1995 presents an intrapsychic explanation of human behaviour concepts based on psychological processes and structures within the mind In this context a unique treatment of personality theory is introduced It focuses on Freud Kelly and Angyal Freud s psychoanalytic theory of personality based on desires Kelly s personal construct theory for thinking and Angyal s holistic concepts of personality Each theory is given a detailed analysis in separate chapters Freud s psychoanalytic theory is cast as a theory of motivation Kelly s personal construct theory as a theory of cognition and then it is noted that there is no comprehensive theory of personality based on emotion Although Angyal s holistic theory is rarely described in modern textbooks Lester includes this because none of the other holistic theorists rival Angyal in their range of hypothetical constructs or descriptive terms Then in sections dealing with alternative viewpoints the author shows how other personality theorists actually endorse and expand upon the ideas expressed by the aforementioned three albeit with different terminology Recognizing the diversity of holistic views in theories of personality several counterpoint chapters are devoted to the holistic ideas Lester separates these into three major areas theorists who have focused on the split in the mind between the real and ideal self recent theorists who explore the possibility that the mind is a multiplicity of selves and theorists who though not having their viewpoints sufficiently articulated in the literature are still well established in the history of psychology Other features include a presentation of the material in modern viewpoints instead of the precise and perhaps outdated style as written by the individual theorists and boxed highlights in each section providing students with practical capsule information for easy reading

Concepts and Theories of Human Development Richard M. Lerner, 2013-05-13 A classic in the field this third edition will continue to be the book of choice for advanced undergraduate and graduate level courses in theories of human development in departments of psychology and human development This volume has been substantially revised with an eye toward supporting applied developmental science and the developmental systems perspectives Since the publication of the second edition developmental systems theories have taken center stage in contemporary developmental science and have provided compelling alternatives to reductionist theoretical accounts having either a nature or nurture emphasis As a consequence a developmental systems orientation frames the presentation in this edition This new edition has been expanded substantially in comparison to the second edition Special features include A separate chapter focuses on the historical roots of concepts and theories of human

development on philosophical models of development and on developmental contextualism Two new chapters surrounding the discussion of developmental contextualism one on developmental systems theories wherein several exemplars of such models are discussed and a corresponding chapter wherein key instances of such theories life span life course bioecological and action theoretical ones are presented A new chapter on cognition and development is included contrasting systems approaches to cognitive development with neo nativist perspectives A more differentiated treatment of nature oriented theories of development is provided There are separate chapters on behavior genetics the controversy surrounding the study of the heritability of intelligence work on the instinctual theory of Konrad Lorenz and a new chapter on sociobiology A new chapter concentrates on applied developmental science
