Rotherham (ed.),2012-09-19 This volume of the Journal of Practical Ecology and Conservation contains chapters about managing and controlling water to guard against flooding It also includes two chapters on assessment of chemical and bacteriological water quality and their impact on agricultural settlements in North African desert regions *A Textbook of Botany for Colleges and Universities: Ecology* John Merle Coulter,Charles Reid Barnes,Henry Chandler Cowles,1911 *Roads and Airfields* U.S. Army Engineer School,1951 Forest Vegetation of Northeast Asia Jirí Kolbek,M. Srutek,Elgene E. O. Box,2013-03-14 When two of us Jifi Kolbek Miroslav Sriltek were working in North Korea on the Czech Slovak field expeditions of the early 1990s we did not think initially of comparing our results with the vegetation of surrounding areas or of writing a book Our efforts mainly involved observing and documenting the vegetation as completely as possible and initial recognition of vegetation units At first we focused on the most obvious vegetation types but eventually also any important types that we could discern Later we focused more on forests since almost ali of northeastern Asia has forest potential and forests stiH do form the landscape matrix in most areas First we studied suburban woods and forests most of which are strongly affected by human activities Later though we also had chances to visit and study lovely mountain regions including Myohyang san Kumgang san Su jang san and the high especially beautiful Changbai shan on the border between North Korea and China The Changbai shan is the highest mountain system in the Korean Peninsula including the highest peak Paektu san We gradually changed our goal from an evaluation of forest data from North Korea to comparison with available field data and literature sources from comparable surrounding areas These include South Korea the Russian Far East northeastern China Manchuria and northem Japan including the Kuril Islands Finally we decided to prepare a preliminary survey of the forest vegetation of the Russian Far East and eventually of aII of northeastem Asia which would be published in English *Vietnam: A Natural History* Eleanor Jane Sterling,Martha Maud Hurley,Le Duc Minh,2008-10-01 A country uncommonly rich in plants animals and natural habitats the Socialist Republic of Vietnam shelters a significant portion of the world s biological diversity including rare and unique organisms and an unusual mixture of tropical and temperate species This book is the first comprehensive account of Vietnam s natural history in English Illustrated with maps photographs and thirty five original watercolor illustrations the book offers a complete tour of the country s plants and animals along with a full discussion of the factors shaping their evolution and distribution Separate chapters focus on northern central and southern Vietnam regions that encompass tropics subtropics mountains lowlands wetland and river regions delta and coastal areas and offshore islands The authors provide detailed descriptions of key natural areas to visit where a traveler might explore limestone caves or glimpse some of the country s

twenty seven monkey and ape species and more than 850 bird species The book also explores the long history of humans in the country including the impact of the Vietnam American War on plants and animals and describes current efforts to conserve Vietnam s complex fragile and widely threatened biodiversity **Ecology** Michael Begon,Colin R.

Townsend,2020-11-11 A definitive guide to the depth and breadth of the ecological sciences revised and updated The revised and updated fifth edition of Ecology From Individuals to Ecosystems now in full colour offers students and practitioners a review of the ecological sciences The previous editions of this book earned the authors the prestigious Exceptional Life time Achievement Award of the British Ecological Society the aim for the fifth edition is not only to maintain standards but indeed to enhance its coverage of Ecology In the first edition 34 years ago it seemed acceptable for ecologists to hold a comfortable objective not to say aloof position from which the ecological communities around us were simply material for which we sought a scientific understanding Now we must accept the immediacy of the many environmental problems that threaten us and the responsibility of ecologists to play their full part in addressing these problems This fifth edition addresses this challenge with several chapters devoted entirely to applied topics and examples of how ecological principles have been applied to problems facing us highlighted throughout the remaining nineteen chapters Nonetheless the authors remain wedded to the belief that environmental action can only ever be as sound as the ecological principles on which it is based Hence while trying harder than ever to help improve preparedness for addressing the environmental problems of the years ahead the book remains in its essence an exposition of the science of ecology This new edition incorporates the results from more than a thousand recent studies into a fully up to date text Written for students of ecology researchers and practitioners the fifth edition of Ecology From Individuals to Ecosystems is an essential reference to all aspects of ecology and addresses environmental problems of the future **Warm-Temperate Deciduous Forests around the Northern Hemisphere**

Elgene O. Box,Kazue Fujiwara,2014-12-29 Warm temperate deciduous forests are southern mainly oak dominated deciduous forests as found over the warmer southern parts of the temperate deciduous forest regions of East Asia Europe and eastern North America Climatic analysis has shown that these forests extend from typical temperate climates to well into the warm temperate zone in areas where winters are a bit too cold for the zonal evergreen broad leaved forests normally expected in that climatic zone This book is the first to recognize and describe these southern deciduous forests as an alternative to the evergreen forests of the warm temperate zone This warm temperate zone will become more important under global warming since it represents the contested transition between deciduous and evergreen forests and between tropical and temperate floristic elements This book is dedicated to the memory of Tatsu Kira the imaginative Japanese ecologist who first noticed and described this general zonation exception and who proposed the name warm temperate deciduous forest **Global Climates since the Last Glacial Maximum** H. E. Wright,1993 Traces the evolution of the global climate since the last period of glacial maximum approximately 18 000 years ago Examines how changes in climate have transformed Earth s

biomes in this period and how this change has influenced the evolution of life

Macroclimate and Plant Forms Elgene E. O. Box, 2012-12-06 This study arose out of the old question of what actually determines vegetation structure and distributions Is climate the overriding control as one would suppose from reading the more geographically oriented literature Or is climate only incidental as suggested by more site and or taxon oriented writers The question might be phrased more realistically How much does climate control vegetation processes structures and distributions It seemed to me as an ambitious doctoral student that one way to attempt an answer might be to try to predict world vegetation from climate alone and then compare the predicted results with actual vegetation patterns If climatic data were sufficient to reproduce the world s actual vegetation patterns then one could conclude that climate is the main control This book represents an expanded second generation version of that original thesis It presents world scale vegetation and ecoclimatic models and a methodology for applying such models to predict vegetation and for evaluating model results This approach also provides a means of geographical simulation of vegetation patterns and changes which represent necessary data inputs in other fields such as atmospheric chemistry and biogeochemical cycling It has been fairly well accepted that climatic and other environmental conditions are associated with the evolution of particular aspects of plant form convergent evolution The particular configurations of plant size photosynthetic surface area and structure e g sclerophylly stomatal resistance and their seasonal variations represent what one can recognize fairly readily as distinct growth forms
