these capital expenditures be financed In order to make sound investment decisions the financial manager must be able to conduct a detailed financial analysis of the company Through the analysis the manager will develop an understanding of the companys past performance and the various forms of financing available for future endeavors One of the first steps in conducting a detailed analysis is deconstructing the financial statements As a result Chapter 2 explains and illustrates how a companys financial statements are constructed deconstructed and interpreted Part II reviews the techniques managers use to assess a companys current financial health plan its future development and make decisions designed to improve its probability for success Chapter 3 demonstrates the methods used to conduct a detailed financial analysis of a firms liquidity position operational efficiency and management effectiveness Chapter 4 explores financial planning and forecasting with particular emphasis on managing a companys growth potential Time value of money is the process of calculating the value of an investment yesterday today and tomorrow Time value concepts underlie virtually every topic in financial management including capital budgeting and capital structure In fact a rudimentary understanding of these concepts is needed when evaluating different capital expenditures and determining the most appropriate financing source For this reason Chapters 5 and 6 in Part III are dedicated to time value of money Part IV demonstrates how managers make investment decisions i e capital budgeting that maximize the firms value Chapter 7 explores the net present value NPV rule and how to apply this technique to make value enhancing investment decisions A number of alternative approaches including the internal rate of return IRR payback period and profitability index are also explored Chapter 8 illustrates how to estimate the cash flow generated by an investment proposal and assess the proposals capacity to create value Chapter 9 demonstrates the methods used to estimate the cost of capital which is used as a hurdle rate in evaluating the cash flows generated by the investment The value added through effective investment and financing decisions will make the company more appealing to investors Part V provides the measures of risk and return used by a companys various capital providers to evaluate firm performance

KEY FEATURESFocused Content The text emphasizes the concepts of financial management most relevant to sound decision making Each topic is applied to an actual company which reinforces the readers understanding of the subject matter Experiential Exercises Real world exercises provide insight into the realities of financial management and guide the reader through the decision making process Cutting edge Software The accompanying CD ROM contains a trial version of Crystal Ball Pro a popular software used in financial management as well as Excel templates needed to complete the end of chapter problems and cases
