Grading for Growth David Clark,Robert Talbert,2023-07-03 Are you satisfied with your current and traditional grading system Does it accurately reflect your students learning and progress Can it be gamed Does it lead to grade grubbing and friction with your students The authors of this book two professors of mathematics with input from colleagues across disciplines and institutions offer readers a fundamentally more effective and authentic approach to grading that they have implemented for over a decade Recognizing that traditional grading penalizes students in the learning process by depriving them of the formative feedback that is fundamental to improvement the authors offer alternative strategies that encourage revision and growth Alternative grading is concerned with students eventual level of understanding This leads to big changes Students take time to review past failures and learn from them Conversations shift from why did I lose a point for this to productive discussions of content and process Alternative grading can be used successfully at any level in any situation and any discipline in classes that range from seminars to large multi section lectures This book offers a comprehensive introduction to alternative grading beginning with a framework and rationale for implementation and evidence of its effectiveness The heart of the book includes detailed examples including variations on Standards Based Grading Specifications Grading and ungrading of how alternative grading practices are used in all kinds of classroom environments disciplines and institutions with a focus on first hand accounts by faculty who share their practices and experience The book includes a workbook chapter that takes readers through a step by step process for building a prototype of their own alternatively graded class and ends with concrete practical time tested advice for new practitioners The underlying principles of alternative grading involve Evaluating student work using clearly defined and context appropriate content standards Giving students helpful actionable feedback Summarizing the feedback with marks that indicate progress rather than arbitrary numbers Allowing students to revise without penalty using the feedback they receive until the standards are met or exceeded This book is intended for faculty interested in exploring alternative forms of learning assessment as well as those currently using alternative grading systems who are looking for

Alternative Logics. Do Sciences Need Them? Paul A. Weingartner,2013-03-09 Initially proposed as rivals of classical logic alternative logics have become increasingly important in sciences such as quantum physics computer science and artificial intelligence The contributions collected in this volume address and explore the question whether the usage of logic in the sciences especially in modern physics requires a deviation from classical mathematical logic The articles in the first part of the book set the scene by describing the context and the dilemma when applying logic in science In part II the authors offer several logics that deviate in different ways from classical logics The twelve papers in part III investigate in detail specific aspects such as quantum logic quantum computation computer science considerations praxic logic and quantum probability Most of the contributions are revised and partially extended versions of papers presented at a conference of the same title of the Acad mie Internationale de Philosophie des Sciences held at the Internationales Forschungszentrum Salzburg in May 1999 Others have been added to complete the picture of recent research in alternative logics as they have been developed for applications in the sciences **Free Will: Libertarianism, alternative possibilities, and moral responsibility** John Martin Fischer,2005 *Projects in Higher Education* National Science Foundation (U.S.),1976
