Ali, C. A. Brebbia, 2006 Digital Architecture is a particularly dynamic field that is developing through the work of architecture schools architects software developers researchers technology users and society alike Featuring papers from the First International Conference on Digital Architecture this book will be of interest to professional and academic architects involved in the creation of new architectural forms as well as those colleagues working in the development of new computer codes of engineers including those working in structural environmental aerodynamic fields and others actively supporting advances in digital architecture Expert contributions encompass topic areas such as Database Management Systems for Design and Construction Design Methods Processes and Creativity Digital Design Representation and Visualization Form and Fabric Computer Integrated Construction and Manufacturing Human Machine Interaction Connecting the Physical and the Virtual Worlds Knowledge Based Design and Generative Systems Linking Training Research and Practice Web Design Analysis the Digital Studio Urban Simulation Virtual Architecture and Virtual Reality Collaborative Design Social Aspects *Advanced Architectural Design and Construction* Milan Palko, 2016-01-08 Special topic volume with invited peer reviewed papers only **Digital Health Maturity: Quality, Interoperability, and Innovation** Siaw-Teng Liaw, Jitendra Jonnagaddala, Myron Anthony Godinho, Zoie Shui Yee Wilkins-Wong, 2025-09-01 Digital Health Maturity Innovation and Quality Improvement provides a roadmap to move from endless pilots and ad hoc system purchases to a systematic stepwise and integrated approach to increasing digital health capacity Specific guidelines tools and use cases are discussed to show how the digital health maturity model DHMM can be put into actual practice Topics cover foundations of DHMM and how to put them into practice organizational considerations for implementation and best practices tools and

pitfalls to avoid In addition the book discusses the future of DHMM and the impact of a global adherence to digital health This is a valuable resource for researchers students policymakers governments and anyone who is interested in learning more about digital health and its worldwide benefits Presents a practical guide and reference to understand and apply the digital health maturity assessment toolkit as the basis for developing implementing and evaluating a digital health strategy and roadmap Discusses a set of ICT capability milestones required to reach a DHM level by coordinating the planning and implementation that maximizes reaching the next level of digital health maturity Describes tools and approaches needed to implement ICT changes required to reach a DHM maturity level *Cybernetic Architectures* Camilo Andrés Cifuentes

Quin,2021-07-29 For the past 50 years the advancements of technology have equipped architects with unique tools that have enabled the development of new computer mediated design methods fabrication techniques and architectural expressions Simultaneously in contemporary architecture new frameworks emerged that have radically redefined the traditional conceptions of design of the built environment and of the role of architects *Cybernetic Architectures* argues that such frameworks have been constructed in direct reference to cybernetic thinking a thought model that emerged concurrently with the origins of informatics and that embodies the main assumptions values and ideals underlying the development of computer science The book explains how the evolution of the computational perspective in architecture has been parallel to the construction of design issues in reference to the central ideas fostered by the cybernetic model It unpacks and explains this crucial relationship in the work of digital architects between the use of information technology in design and the conception of architectural problems around an informational ontology This book will appeal to architecture students and scholars interested in understanding the recent transformations in the architectural landscape related to the advent of computer based design paradigms **Digital Poetics** Dr Marjan Colletti,2013-12-31 *Digital Poetics* celebrates the architectural design exuberance made possible by new digital modelling techniques and fabrication technologies By presenting an unconventional and original humanistic theory of CAD computer aided design the author suggests that beyond the generation of innovative engineering forms digital design has the potential to affect the wider complex cultural landscape of today in profound ways The book is linked to a website which contains a larger selection of images of some featured projects

Authoritarian Actors and Strategic Digital Information Operations Ihsan Yilmaz,Shahram Akbarzadeh,2025-11-14 This book explores the complex web of Strategic Digital Information Operations SDIOs defined as deliberate efforts by state and non state actors to manipulate public opinion and emotions using digital technologies that intersect with political ambitions to create a complex environment ripe for manipulation Drawing from extensive research and case studies the book examines how actors ranging from authoritarian regimes to extremist groups such as ISIS and even political entities in democratic countries leverage digital platforms to further their agendas As such it provides a comprehensive overview of SDIOs their evolving tactics and implications for democracy governance and international

relations It examines the diverse tactics employed by these actors from spreading half truths and distractions to leveraging historical and religious narratives in the form of conspiracy theories or non conspiracy narratives aiming to control the discourse and shape the online environment to their advantage This research challenges the conventional focus on disinformation highlighting the shift toward more sophisticated and less discernible means of digital manipulation globally and argues that SDIOs have become a pivotal tool for influencing public opinion shaping political narratives and even undermining democratic processes This book will be of key interest to scholars students and practitioners in communications media studies political sociology comparative politics security studies political science and international politics The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 International license

Digital Transformation. The Realignment of Information Technology and Business Strategies for Retailers in South Africa Albert

Mubako, 2017-06-27 Remaining competitive in the retail industry of South Africa in the digital age is a major business concern In the age of digital natives people are well connected on various digital technology platforms and are digital consumers Digital technologies offer retail organizations new innovative ways to create value by utilizing digital business strategies processes and products This qualitative research study explores the perception of retail strategy experts and decision makers toward realignment of IT and business strategies considering digital transformation in South Africa Based on interviews with seven managers and decision makers in the retail industry the study reveals that digital technologies have disrupted traditional ways of doing business The study proposes eight major recommendations in which retail traders could innovate their business strategy to enhance value creation beyond traditional approaches to retailing It provides a good starting point for academic research in a domain that is deficient in theoretical and empirical research on the South Africa retail sector and offers retailing managers a conceptual model to guide them toward a digital business strategy for transient competitive advantages

No Matter Anastasia Karandinou, 2013 How do digital media mobile phones GPS iPods portable computers internet virtual realities etc affect the way we perceive inhabit and design space Why do architects traditionally design draw and map the visual as opposed to other types of sensations of space the sound the smell the texture etc Architecture is not only about the solid material elements of space it is also about the invisible immaterial intangible elements of space This book examines the design representation and reception of the ephemeral in architecture It discusses how architects map and examine the spatial qualities that these elements create and questions whether and if so how they take them into account in the designing process Karandinou argues that current interest in the ephemeral in contemporary culture and architecture is related to the evolution of digital media and that it is related to the new ways of thinking about space and everyday situations that new media enables With sound and video recording devices now being embedded in everyday gadgets and mobile phones capturing sounds or ephemeral situations and events has become an everyday habit

New animation techniques allow designers to think about space through time as they are able to design dynamic and responsive spaces as well as static spaces explored by someone over time Contemporary video games are no longer based on a simple visual input and a keyboard they now involve other senses movement and the response of the whole body in space This book therefore argues that the traditional binary opposition between the sensuous and the digital is currently being reversed Subsequently new media can also function as a new tool to think with about space Designers are now able to think through time and design spaces accordingly Time temporality ephemerality become central issues in the designing process The notion first claimed by Marshall McLuhan in the 1960s that the emergence of new digital media cause a shift in sensorium is more relevant than ever and can be expanded in order to accomodate the new emerging technologies Through analysis of theoretical concepts design case studies and real life observations this book challenge and inspires architects theorists researchers and students both about the above mentioned series of questions and also possible methodologies for addressing them Publisher s description **The Digital Architect** Ken Sanders,1996 Describing computer aided design software word processing databases multi media presentations animation virtual reality on line services and the Internet this guide aims to provide architects with sufficient understanding to successfully incorporat *Digital Libraries* ,2003

Techniques and Practices in the Training of Digital Operator Skills Bruce C. Leibrecht,2007 This report presents research on classroom training practices in Army Battle Command System courses The investigation examined a sample of institutional courses using observation and classification techniques Three learning theories behaviorist cognitive and constructivist guided the collection and analysis of data Cognitive and behaviorist training techniques were observed somewhat more frequently than constructivist techniques The frequency of training techniques depended on the type of course operator vs leader orientation instructor style and progression across days The discussion offers potential improvements i the areas of training techniques program of instruction training environment and instructional innovation The report is intended for use by training designers and developers digital trainers and training managers working in institutional settings P i [This Thing Called Theory](#) Teresa Stoppani,Giorgio Ponzio,George Themistokleous,2016-11-10 In the age of post digital architecture and digital materiality [This Thing Called Theory](#) explores current practices of architectural theory their critical and productive role The book is organized in sections which explore theory as an open issue in architecture as it relates to and borrows from other disciplines thus opening up architecture itself and showing how architecture is inextricably connected to other social and theoretical practices The sections move gradually from the specifics of architectural thought its history theory and criticism and their ongoing relation with philosophy to the critical positions formulated through architecture s specific forms of expression and onto more recent forms of architecture s engagement and self definition The book s thematic sessions are concluded by and interspersed with a series of shorter critical position texts which together propose a new vision of the contemporary role of theory in architecture What emerges overall is a critical and

productive role for theory in architecture today theory as a proposition theory as task and as a risk of architecture **Media Architecture Compendium** Luke Hespanhol, M. Hank Hausler, Martin Tomitsch, Gernot Tscherteu, 2017-08-09 New frontiers for media architecture This compendium explores how digital media is shaping cities today and in the years to come It illustrates groundbreaking use of light and media in urban environments through 36 winning or shortlisted entries from the Media Architecture Biennale Awards in 2014 and 2016 in five categories Animated architecture Money architecture Participatory architecture urban interaction Spatial media art Future trends prototypes *Virtual Complexity* Thomas Michael Krizner, 2003 *Proceedings of First ACM/IEEE-CS Joint Conference on Digital Libraries* Edward Alan Fox, 2001

Artificial Intelligence and the Design of Expert Systems George F. Luger, William A. Stubblefield, 1989 Provides a thorough discussion of AI's theoretical foundations and advanced applications including expert system design and knowledge based programming It is a wealth of advanced AI topics and applications that should appeal to a broad audience

Coordinating Digitisation in Europe Maria Teresa Natale, Marzia Piccininno, 2006 **Artificial Intelligence** George F. Luger, William A. Stubblefield, 1993 Written by a leading international consultant in AI this book delivers a balanced and comprehensive introduction to both the principles and practical applications of Artificial Intelligence The discussion of AI theory and development is richly illustrated with AI solutions presented in three languages CLOS LISP and PROLOG **The New Structuralism** Rivka Oxman, Robert Oxman, 2010-08-23 Today the convergence of design engineering and architectural technologies is breeding a new material practice in experimental architecture The significant emphasis on the structuring logic of tectonics is resulting in a new structuralism in design In this pioneering publication this important shift is fully defined as a highly dynamic synthesis of emerging principles of spatial structural and material ordering integrated through the application of materialisation and fabrication technologies Providing the foundations for a new theory of structuring in architecture the new structuralism has broad implications for the way we both conceive and undertake architectural design as its impact starts to emanate not only across education internationally but also through architectural research and practice Features premier research and design oriented engineering practices Bollinger Grohmann Buro Happold Hanif Kara AKT Werner Sobek Focuses on design and fabrication technologies in the recent work of Martin Bechthold Barkow Leibinger EMBT Enric Miralles Benedetta Tagliabue Gramazio Kohler Fabian Scheurer design to production Yves Weinand and Markus Hudert Contributors include John Chilton Dominik Holzer and Steven Downing Neri Oxman Helmut Pottmann Nina Rappaport
