Glas, 2005-12-30 Modern computer technology has opened up several new possibilities for optimizing the administration of educational and psychological tests In computer adaptive testing CAT tests are automatically tailored to the proficiency level of the individual examinees Currently nearly all large scale testing programs in the western world are already adaptive or in the process of becoming so Written by active CAT researchers from Europe and North America the chapters offer a comprehensive introduction to the latest developments in the theory and practice of CAT The book can be used both as a basic reference on the state of the art in CAT and a valuable resource in graduate courses on test theory The theoretical chapters in this book cover such topics as item selection and ability estimation item pool development and maintenance item calibration and model fit and testlet based adaptive testing The practical chapters describe the operational aspects of existing large scale CAT programs

Response and Catastrophe Mechanisms of Geotechnical Underground Exploration: Theories and Numerical Modeling Yongqiang Zhou, Shaobo Chai, Kai Liu, 2024-11-18 The pursuit of deep seated resources and space utilization has emerged as a strategic direction for global superpowers in the new era with a growing emphasis on diving into the depths of the Earth The rapid urbanization has resulted in an accelerated demand for underground exploration particularly with regards to major infrastructure projects such as railways and highways that often require the construction of numerous mountain and water crossing tunnels Also deep seated energy exploration and storage frequently involve complex challenges e g a range of geological hazards including earthquakes rock bursts large and uneven deformations and instability induced by blasting or fault slippage in rock and soil masses Therefore the response of geological formations and structures in underground exploration the mechanisms of disasters and the corresponding evaluation methods are crucial issues in ensuring the construction and safe operation of such projects

Mathematical Theory of Finite Elements Leszek F.

Demkowicz,2023-09-22 This book discusses the foundations of the mathematical theory of finite element methods The focus is on two subjects the concept of discrete stability and the theory of conforming elements forming the exact sequence Both coercive and noncoercive problems are discussed Following the historical path of development the author covers the Ritz and Galerkin methods to Mikhlin s theory followed by the Lax Milgram theorem and Cea s lemma to the Babuska theorem and Brezzi s theory He finishes with an introduction to the discontinuous Petrov Galerkin DPG method with optimal test functions Based on the author s personal lecture notes for a popular version of his graduate course on mathematical theory of finite elements the book includes a unique exposition of the concept of discrete stability and the means to guarantee it a coherent presentation of finite elements forming the exact grad curl div sequence and an introduction to the DPG method Intended for graduate students in computational science engineering and mathematics programs Mathematical Theory of Finite Elements is also appropriate for graduate mathematics and mathematically oriented engineering students Instructors will find the book useful for courses in real analysis functional analysis energy Sobolev spaces and Hilbert space methods for PDEs **A**

Multidimensional Item Response Theory is the first book to give thorough coverage to this emerging area of psychometrics. The book describes the commonly used multidimensional item response theory MIRT models and the important methods needed for their practical application. These methods include ways to determine the number of dimensions required to adequately model data, procedures for estimating model parameters, ways to define the space for a MIRT model, and procedures for transforming calibrations from different samples to put them in the same space. A full chapter is devoted to methods for multidimensional computerized adaptive testing. The text is appropriate for an advanced course in psychometric theory or as a reference work for those interested in applying MIRT methodology. A working knowledge of unidimensional item response theory and matrix algebra is assumed. Knowledge of factor analysis is also helpful.
