Theory of Thermoluminescence and Related Phenomena Reuven Chen, S. W. S. McKeever, 1997 In this book the authors give an up to date account of thermoluminescence TL and other thermally stimulated phenomena Although most recent experimental results of TL in different materials are described in some detail the main emphasis in the present book is on general processes and the approach is more theoretical Thus the details of the possible processes which can take place during the excitation of the sample and during its heating are carefully analysed The methods for analysing TL glow curves are critically discussed and recommendations as to their application are made Also discussed is the expected behavior of these phenomena as functions of the experimental parameters for example dose of excitation The consequences of the main applications of TL for example radiation dosimetry are also discussed in detail as are the similarities and dissimilarities of other thermally stimulated phenomena and the simultaneous measurements of the latter and TL

Thermal Methods of Analysis P.J. Haines, 2012-12-06 The wide range of applications of thermal methods of analysis in measuring physical properties studying chemical reactions and determining the thermal behaviour of samples is of interest to academics and to industry These applications prompted the writing of this book in the hope that the descriptions explanations and examples given would be of help to the analyst and would stimulate the investigation of other thermal techniques Thermal studies are a fascinating means of examining the samples and the problems brought to us by colleagues students and clients If time allows watching crystals change on a hot stage microscope or measuring the properties and changes on a DSC or TG or any thermal instrument can be a rewarding activity besides providing valuable analytical information This book started from a series of lectures delivered at Kingston University and at meetings of the Thermal Methods Group of the United Kingdom The collaboration and information supplied to all the contributors by colleagues and instrument manufacturers is most gratefully acknowledged as are the valuable contributions made at meetings of the International Confederation for Thermal Analysis and Calorimetry ICTAC and at the European Symposia on Thermal Analysis and Calorimetry ESTAC
