Treatment Of Contaminated Soil Fundamentals Analysis Applications:

Treatment of Contaminated Soil Rainer Stegmann, 2001-05-22 The treatment of contaminated soil is a permanently relevant subject for ensuring the quality of the environment. A wide variety of soils contaminated with a broad range of harmful chemical compounds all around the world call for many different treatment strategies. Research activities focus on affordable methods offering the greatest possible effect whilst limiting the potential side effects. This book sums up the research activities of Research Centre 188 which has cooperated with the Technical University of Hamburg Harburg, the University of Hamburg and GKSS in Geesthacht over the last 12 years, thus greatly advancing our knowledge in this field.

Treatment of Contaminated Soil Rainer Stegmann, Gerd Brunner, Wolfgang Calmano, Gerhard Matz, 2013-03-09 Newly developed and innovative methods are mentioned and outlined so that the book can be used as a source of information for scientists and professionals specialised in the treatment of soils as well as for students in courses of environmental studies. The book offers a short compressed overview of the important features of this subject and can be used as a reference book of the state of the art. The appendix offers the interested reader a detailed survey of materials test methods and apparatuses as well as a description of analytical directions and processes.

Methods of Environmental and Social Impact

Assessment Riki Therivel, Graham Wood, 2017-09-13 Environmental and social impact assessment (ESIA) is an important and often obligatory part of proposing or launching any development project. Delivering a successful ESIA needs not only an understanding of the theory but also a detailed knowledge of the methods for carrying out the processes required. Riki Therivel and Graham Wood bring together the latest advice on best practice from experienced practitioners to ensure an ESIA is carried out effectively and efficiently. This new edition explains how an ESIA works and how it should be carried out, demonstrates the links between socio-economic, cultural, environmental and ecological systems and assessments, incorporates the World Bank's IFC performance standards and best practice examples from developing as well as developed countries, includes new chapters on emerging ESIA topics such as climate change, ecosystem services, cultural impacts, resource efficiency, land acquisition and involuntary resettlement. Invaluable to undergraduate and MSc students of ESIA, on planning, ecology, geography and environment courses, this internationally oriented fourth edition of *Methods of Environmental and Social Impact Assessment* is also of great use to planners, ESIA practitioners and professionals seeking to update their skills.
