Diagnosing and treating sinusitis

Diagnosis: A doctor can diagnose sinusitis by looking at the symptoms and examining the nose. They may also use a CT scan to look at the sinuses. **Treatment:** Sinusitis can be treated with over-the-counter medications, such as decongestants and pain relievers. In some cases, a doctor may prescribe antibiotics or corticosteroids. Surgery may be needed if the sinusitis is chronic or if there is a structural problem in the sinuses.

Prevention: Sinusitis can be prevented by avoiding allergens, such as pollen and mold. It is also important to keep the sinuses moist by using a saline nasal spray. If you have a structural problem in the sinuses, surgery may be needed to correct it.

True Sinus Disease and the Occurrence of Anatomical Abnormalities of the Nasal Passages Margo Justine Walker, 2006 The objective of this study is to look at patients with true sinus disease and what other nasal anatomical abnormalities are present and do these nasal abnormalities contribute to the sinus disease itself It has been found that most sinus infection complaints do not result in true sinus infections My hypothesis is that the majority of sinusitis complaints will result in not true sinus disease I also hypothesize that those patients with true sinus disease will have other anomalies of the nasopharyngeal region The design of the study was based on a chart review of 50 patients seen in the ENT practice The patients were chosen based on sinus type complaints or a history of chronic sinus infections Computed tomography scans and Water's view x ray were used to determine both acute and chronic sinus disease as well as nasal passage anatomical abnormalities Results 47 out of the 50 patients had CT scan of those three that did not have CT scan 1 had water's view x ray 1 had findings on endoscopy during surgery and 1 had no imaging or diagnostics recorded in their chart notes Total acute sinus infections 13 VS chronic sinus infections 22 out of 47 patients were 28% and 47% respectively Each nasal anatomical abnormality looked at were occlusion of the osteomeatal complex maxillary antrum scarring mucosal thickening and other abnormalities Other abnormalities included NSD concha bulosa hypertrophied turbinates polyps mucocoele bony spurs septal perforations and retention cysts The results of this study showed that the majority of patients had problems with other abnormalities 41/47 87% and out of this group 24% had acute sinusitis 46% had chronic sinusitis Chronic sinus disease was more common in all groups except the scarring of the maxillary antrum where acute and chronic disease occurred equally Mucosal thickening was the second most common occurring abnormality but it had the highest percentage rate of both acute and chronic sinus conditions
