Universal Design 2021: From Special to Mainstream Solutions Ira

Verma, 2021-07-15. Universal Design is a process for creating an equitable and sustainable society. It is a concept committed to recognizing and accepting each individual's potential and characteristics and promoting the realization of a built environment that does not stigmatize users but enables everyone to participate fully in their community. This book presents 32 articles from the 5th International Conference on Universal Design UD2021. Previous Universal Design conferences have been organized biennially but the 2020 conference was postponed due to COVID-19 restrictions and eventually held online from 9-11 June 2021. UD2021 brings together a multidisciplinary group of experts from around the world to share knowledge and best practice with the common goal of shaping the way we design, avoiding stereotyped or discriminatory views and solutions that could stigmatize particular groups of people. The articles are organized into chapters under seven broad themes: universal design and inclusive design, user experience and co-design, access to education and learning, environment, web accessibility and usability of technology, architecture and the built environment, mobility and transport, and designing for older people. The current situation has highlighted not only the importance of web accessibility, the user-friendliness of interfaces and remote connections during the last year, the importance and quality of our daily living environment, access to services and green space has also become ever more obvious. This book will be of particular interest to those working to enable all those with disabilities or impairments to live independently and participate fully in all aspects of life.

Universal Design 2016: Learning from the Past, Designing for the Future Jenny Darzentas, Tanja Walsh, David Swallow, Leonardo Sandoval, Andrew Lewis, Christopher Power, 2016-09-15. Universal Design is the term used to describe the design of products and environments which can be used by all people to the greatest extent possible without the need for adaptation or specialized design. It is not a euphemism for designs for people with a disability but really is about designing to include all people regardless of their age, ability, cultural background or status in life. However, it remains the case that many designers and developers fail to understand the need for universal design and lack the skills needed to implement it. This book presents papers from the 3rd International Conference on Universal Design UD 2016 held in York UK in August 2016. The theme of the

conference was learning from the past designing for the future and it aimed to bring together policymakers practitioners and researchers interested in the different strands of universal design to exchange ideas and best practice review some of the developments in universal design from the last 20 years and formulate strategies for taking the concept of universal design forward into the future The book is divided into two sections Section 1 About Universal Design and Section 2 Universal Design In Practice The book will be of interest to all those whose work involves design from the built environment and tangible products to communication services and systems
