Uncertainty In Geographical Information Research Monographs In Geographic Information Systems:

Uncertainty in Geographical Information Jingxiong Zhang, Michael F. Goodchild, 2002-03-29 As Geographic Information Systems GIS have developed and their applications have been extended the issue of uncertainty has become increasingly recognized It is highlighted by the need to demystify the inherently complex geographical world to facilitate computerization in GIS by the inaccuracies that emerge from man machine interactions in data Digital Soil Mapping with Limited Data Alfred E. Hartemink, Alex B. McBratney, Maria de Lourdes Mendonça-Santos, 2008-07-11 Significant technological advances have been few and far between in the past approximately one hundred years of soil survey activities Perhaps one of the most innovative techniques in the history of soil survey was the introduction of aerial photographs as base maps for field mapping which replaced the conventional base map laboriously prepared by planimeter and alidade Such a relatively simple idea by today's standards revolutionized soil surveys by vastly increasing the accuracy and efficiency Yet even this innovative approach did not gain universal acceptance immediately and was hampered by a lack of aerial coverage of the world funds to cover the costs and in some cases a reluctance by some soil mappers and cartographers to change Digital Soil Mapping DSM which is already being used and tested by groups of dedicated and innovative pedologists is perhaps the next great advancement in delivering soil survey information However like many new technologies it too has yet to gain universal acceptance and is hampered by ignorance on the part of some pedologists and other scientists DSM is a spatial soil information system created by numerical models that count for the spatial and temporal variations of soil properties based on soil formation and related environmental variables Lagacherie and McBratney 2007 Non-timber Forest Products in Uganda Olivier Cottray, Lera Miles, Adrian C. Newton, 2006 **Small-Scale Map Projection Design** Frank Canters, 2002-02-21 The use of computers in cartography has made it easier for map makers to transform data from one map projection to another and experiment with alternative representations of geographical data This has created new challenges and opportunities for map projection scientists Small Scale Map Projection Design focuses on numerical map projection research and is written from the perspective of the map projection user It demonstrates how advances in the measurement of map projection distortion and in the development of low error map projections can help map makers decide what type of map projection is best for their purpose and shows how they can eventually design their own map projections Cartography and Geographic Information Science, 2003 *Perspectives on Spatial Data Analysis* Luc Anselin, Sergio J. Rey, 2009-12-24 Spatial data analysis has seen explosive growth in recent years Both in mainstream statistics and econometrics as well as in many applied fields the attention to space location and interaction has become an important feature of scholarly work The methods developed to deal with problems of spatial pattern recognition spatial autocorrelation and spatial heterogeneity have seen greatly increased adoption in part due to the availability of user friendly desktop software Through this theoretical and applied work Arthur Getis has been a major contributing figure in this development In this volume we take both a retrospective and

a prospective view of the field We use the occasion of the retirement and move to emeritus status of Arthur Getis to highlight the contributions of his work In addition we aim to place it into perspective in light of the current state of the art and future directions in spatial data analysis To this end we elected to combine reprints of selected classic contributions by Getis with chapters written by key spatial scientists These scholars were specially invited to react to the earlier work by Getis with an eye toward assessing its impact tracing out the evolution of related research and to reflect on the future broadening of spatial analysis The organization of the book follows four main themes in Getis' contributions Spatial analysis Pattern analysis Local statistics Applications For each of these themes the chapters provide a historical perspective on early methodological developments and theoretical insights assessments of these contributions in light of the current state of the art as well as descriptions of new techniques and applications

Description Approaches and Automated Generalization Algorithms for Groups of Map Objects Haowen Yan, 2019-01-04 This book focuses on the generalization of map features providing descriptions and classifying groups of map objects into six categories point clusters groups of contours road networks river networks continuous areal features and discrete areal features Discussing the methods and algorithms in map generalization in equal measure it also describes the approaches for describing map features The book is a valuable reference for graduates and researchers who are interested in cartography and geographic information science systems especially those in automated map generalization and spatial databases construction

An Introduction To The Theory Of Spatial Object Modelling For GIS Martin Molenaar, 1998-12-15 This text provides a background view of the object approach related geometric aspects the different level of data modelling and the role of geo information theory The rest of the book builds upon these concepts describing the applicability of broader aspects such as topology thematic object classes and class hierarchies object aggregation and generalization and uncertainty

The SAGE Handbook of Spatial Analysis A Stewart Fotheringham, Peter A Rogerson, 2008-12-22 The widespread use of Geographical Information Systems GIS has significantly increased the demand for knowledge about spatial analytical techniques across a range of disciplines As growing numbers of researchers realise they are dealing with spatial data the demand for specialised statistical and mathematical methods designed to deal with spatial data is undergoing a rapid increase Responding to this demand The Handbook of Spatial Analysis is a comprehensive and authoritative discussion of issues and techniques in the field of Spatial Data Analysis Its principal focus is on why the analysis of spatial data needs separate treatment the main areas of spatial analysis the key debates within spatial analysis examples of the application of various spatial analytical techniques problems in spatial analysis areas for future research Aimed at an international audience of academics The Handbook of Spatial Analysis will also prove essential to graduate level students and researchers in government agencies and the private sector

a landscape This book brings together leading figures from the field to provide an up to date survey of recent advances identify key research problems and suggest a future direction for development and expansion of knowledge Providing in depth reviews of the principles and methods for understanding landscape patterns and changes the book illustrates concepts with examples of innovative applications from different parts of the world Forming a current state of the science for the science of landscape ecology this book forms an essential reference for graduate students academics professionals and practitioners in ecology environmental science natural resource management and landscape planning and design
