Winning The Silicon Sweepstakes Can The United States Compete In Global Telecommunications:

Winning the Silicon Sweepstakes Rob Frieden, 2010-01-01 In this timely book Rob Frieden points out the myriad ways the United States has fallen behind other countries in telecommunications. Despite the appearance of robust competition and entrepreneurship in U S telecom markets there is very little of either. Because of an inattentive Congress and a misguided Federal Communications Commission unwilling to confront real problems industry incumbents have been able to earn healthy profits while keeping the United States in the backwaters of Internet based information communication and entertainment markets. At every turn regulators have tipped the scales in favor of large established companies creating an environment that stifles innovation. As a consequence Americans are stuck with relatively slow connectivity and with equipment that lacks features that have been standard in other countries for years. In telecommunications the United States is a little like a third world country that is developing under a crushing bureaucracy without recognizing that the rest of the world has passed it by. Frieden shows how failure can intrude on the ability of the United States to compete and suggests how to restore its competitiveness. Publisher's description

Regulation and the Performance of Communication and Information Networks Gerald R. Faulhaber, Gary Madden, Jeffrey Petchey, 2012-01-01 Due to their economic characteristics and also to their consequences on many aspects of collective life information networks have always been at the edge of regulatory innovations and at the center of policy debates. The contributors of this volume combine long term visions of the factors determining regulatory policies with up to date analyses of technicalities to be dealt with to provide the reader with an extended understanding of the issues and constraints shaping the future of digital networks. Eric Brousseau Universit Paris Dauphine France and the European University Institute Italy Digital markets worldwide are in rapid flux. The Internet and World Wide Web have traditionally evolved in a largely deregulated environment but recently governments have shown great interest in this rapidly developing sector and are imposing regulations for a variety of reasons that are changing the shape of these industries. This book explores why the industrial organization of broadband ISPs Internet backbone providers and content application providers are in such turmoil. The expert contributors straddle the turbulent past of the telecoms sector and also contribute to its exciting though unpredictable future via positive analysis of past communications policies which is then utilized to deduce lessons to guide future policy making decisions. It is illustrated that broadband ISPs no longer simply provide a conduit for service delivery they are also involved in producing content and transaction services themselves in competition with content and delivery providers. The blurring of the traditional lines between these three sectors as each enters into the others markets is highlighted. The conclusion is that we are witnessing the emergence of powerful competing platforms linked in complex ways that challenge traditional economic analyses. Exploring governance issues regulation and investment next generation service markets and wireless communication this book will prove a fascinating and illuminating read for scholars researchers post graduate students and policymakers with an interest in ICT.

Media Law and Evolving Concepts of Democracy Network neutrality and traffic management Public Service Broadcasting in Europe Interception of Communication and Surveillance in Russia State secrets leaks and the media A variety of rule making institutions are considered including administrative and judicial entities within and outside government but also entities such as associations and corporations that generate binding rules The book assesses the emerging role of supranational economic and political groupings as well as non Western models such as China and India where cultural attitudes toward media freedoms are often very different Monroe E Price is Director of the Center for Global Communication Studies at the Annenberg School for the University of Pennsylvania and Joseph and Sadie Danciger Professor of Law and Director of the Howard M Squadron Program in Law Media and Society at the Cardozo School of Law Stefaan Verhulst is Chief of Research at the Markle Foundation Previously he was the co founder and co director with Professor Monroe Price of the Programme in Comparative Media Law and Policy PCMLP at Oxford University as well as senior research fellow at the Centre for Socio Legal Studies Libby Morgan is the Associate Director of the Center for Global Communication Studies at the Annenberg School for the University of Pennsylvania

Internet Co-Regulation Christopher T. Marsden, 2011-08-18 Chris Marsden argues that co regulation is the defining feature of the Internet in Europe Co regulation offers the state a route back into questions of legitimacy governance and human rights thereby opening up more interesting conversations than a static no regulation versus state regulation binary choice The basis for the argument is empirical investigation based on a multi year European Commission funded study and is further reinforced by the direction of travel in European and English law and policy including the Digital Economy Act 2010 He places Internet regulation within the regulatory mainstream as an advanced technocratic form of self and co regulation which requires governance reform to address a growing constitutional legitimacy gap The literature review case studies and analysis shed a welcome light on policymaking at the centre of Internet regulation in Brussels London and Washington revealing the extent to which states firms and increasingly citizens are developing a new type of regulatory bargain

Regulating Code Ian Brown, Christopher T. Marsden, 2023-08-15 The case for a smarter prosumer law approach to Internet regulation that would better protect online innovation public safety and fundamental democratic rights Internet use has become ubiquitous in the past two decades but governments legislators and their regulatory agencies have struggled to keep up with the rapidly changing Internet technologies and uses In this groundbreaking collaboration regulatory lawyer Christopher Marsden and computer scientist Ian Brown analyze the regulatory shaping of code the technological environment of the Internet to achieve more economically efficient and socially just regulation They examine five hard cases that illustrate the regulatory crisis privacy and data protection copyright and creativity incentives censorship social networks and user generated content and net neutrality The authors describe the increasing multistakeholderization of Internet governance in which user groups argue for representation in the closed business government dialogue seeking to bring in both rights based and technologically expert perspectives Brown and

Marsden draw out lessons for better future regulation from the regulatory and interoperability failures illustrated by the five cases They conclude that governments users and better functioning markets need a smarter prosumer law approach Prosumer law would be designed to enhance the competitive production of public goods including innovation public safety and fundamental democratic rights *Policy and Marketing Strategies for Digital Media* Yu-li Liu,Robert G.
