Winning In A Highly Competitive Manufacturing Environment:

Innovations in Competitive Manufacturing Paul M. Swamidass, 2012-12-06 *Innovations in Competitive Manufacturing* is an examination of manufacturing innovations both technical and knowledge based. Over the recent past, technology has created dramatic changes in manufacturing. As a result, the book focuses on the use of technology in gaining competitive advantage in global manufacturing. Forty topics are surveyed in the book, organized into thirteen chapters. Each topic is a carefully written account by one or more leading researchers in that area. This is the first systematic examination of the recent innovations in manufacturing strategy and technology. In addition to providing an understanding of these manufacturing innovations, the book underscores the strategic importance of creating and sustaining the technological resources to ensure a stable manufacturing economic base. The book's purpose is to examine the elements that make today's manufacturers successful. Many examples from industry throughout the book will enable the reader to appreciate and comprehend the concepts presented in the article. In addition to the technical and innovative information, implementation issues concerning new ideas and manufacturing practices are explored within the topical discussions. Four in-depth descriptions of real-life cases provide illustration of key principles. The book has been constructed as a reference tool for manufacturing researchers, students, and practitioners. Hence, after reading the introduction, *Innovation in Competitive Manufacturing: From JIT to E-Business*, any section or topic in the book can be consulted and/or read in any sequence the reader may choose.

Competitive Manufacturing Stuart A. Rosenfeld, 2012-06-01 Originally published in 1992 by the Center for Urban Policy Research, New Brunswick, NJ.

Multi-Criteria Decision-Making Methods in Manufacturing Environments Shankar Chakraborty, Prasenjit Chatterjee, Partha Protim Das, 2023-10-13 This book introduces the step-by-step processes involved in using MCDM methods, starting from problem formulation, model development, and criteria weighting to the final ranking of the alternatives. The authors explain the different MCDM methods that can be used in specific manufacturing environments. The book explains the conceptual frameworks of how these methods are applied, with special focus on their applicability and usefulness. The authors begin with an introduction to multi-criteria decision making, followed by explanations of 29 MCDM methods and their applications. The final sections of the book describe helpful normalization techniques and criteria weight measurement techniques. The collection of diverse range of manufacturing applications and case studies presented here will aid readers in applying cutting-edge MCDM methods to their own manufacturing projects. As both a research and teaching tool, this book encourages critical and logical thinking when applying MCDM methods for solving complex manufacturing decision-making problems.
