Methods in Banach Space Theory Jesus M. F. Castillo, William B. Johnson, 2006-11-30 A comprehensive overview of modern Banach space theory

Transfer Operators, Endomorphisms, and Measurable Partitions Sergey Bezuglyi, Palle E. T. Jorgensen, 2018-06-21 The subject of this book stands at the crossroads of ergodic theory and measurable dynamics With an emphasis on irreversible systems the text presents a framework of multi resolutions tailored for the study of endomorphisms beginning with a systematic look at the latter This entails a whole new set of tools often quite different from those used for the easier and well documented case of automorphisms Among them is the construction of a family of positive operators transfer operators arising naturally as a dual picture to that of endomorphisms The setting close to one

initiated by S Karlin in the context of stochastic processes is motivated by a number of recent applications including wavelets multi resolution analyses dissipative dynamical systems and quantum theory The automorphism endomorphism relationship has parallels in operator theory where the distinction is between unitary operators in Hilbert space and more general classes of operators such as contractions There is also a non commutative version While the study of automorphisms of von Neumann algebras dates back to von Neumann the systematic study of their endomorphisms is more recent together with the results in the main text the book includes a review of recent related research papers some by the co authors and their collaborators

Topics in Symbolic Dynamics and Applications F. Blanchard,A. Maass,A. Nogueira,2000-06-29 This book is devoted to recent developments in symbolic dynamics and it comprises eight chapters The first two are concerned with the study of symbolic sequences of low complexity the following two introduce high complexity systems The later chapters go on to deal with more specialised topics including ergodic theory number theory and one dimensional dynamics

Topological and Symbolic Dynamics Petr Kůrka,2003 A dynamical system is a continuous self map of a compact metric space Topological dynamics studies the iterations of such a map or equivalently the trajectories of points of the state space The basic concepts of topological dynamics are minimality transitivity recurrence shadowing property stability equicontinuity sensitivity attractors and topological entropy Symbolic dynamics studies dynamical systems whose state spaces are zero dimensional and consist of sequences of symbols The main classes of symbolic dynamical systems are adding machines subshifts of finite type sofic subshifts Sturmian substitutive and Toeplitz subshifts and cellular automata
