

Before seeing practical examples, a short digression on the counterbalance of white issues. As has been seen in the previous pages, the new *V-RayIES* (and probably future *V-RayLights* as well), has the feature of expressing its color by means of the temperature. This way the scene acquires some color dominance, going from the orange for low temperatures, up to light blue for high ones. Balancing white means removing these dominants, in such a way that white is really white, and not orange or light blue.

Regarding this, the *white balance* parameter and its pull-down menu can be useful. For example, if a room is lit with a light with a temperature of 7500°K without any counterbalance of white, the environment is going to appear very cold, because it tends towards light blue. If the counterbalance of the white is set to *D75*, this dominant disappears and the scene will be balanced. Here below are some examples of comparisons between renders with and without the counterbalance and with new presets.

■ **Figure 9.128**
Different values of *white balance*.

3 other presets are present: *Custom*, *Neutral* and *Daylight*.

Custom - this preset allows one to specify any color to be used for the white balance.

Neutral - the color to be used for the counterbalance is precisely RGB = [255, 255, 255].

Daylight - preset to be used together with the *V-RaySun* + *V-RaySky* system.

■ **Figure 9.129**
White balance in a daylight situation. By using the *Daylight* preset the light blue dominant tends to disappear, making the image better balanced.
