The Philosophy of GIS

Timothy Tambassi,2019-06-04 This anthology aims to present the fundamental philosophical issues and tools required by the reflection within and upon geography and Geographic Information Systems GIS It is an introduction to the philosophy for GIScience from an analytical perspective which looks at GIS with a specific focus on its fundamental and most general concepts and distinctions The first part of the book is devoted to explore some of the main philosophical questions arising from GIS and GIScience which include among others investigations in ontology epistemology linguistics and geometrical modeling The second part concerns issues related to spatial and cartographical representations of the geographical world The third part is focused on the ontology of geography specifically in terms of geographical entities objects and boundaries Finally in the fourth part the topic of GIS constitutes a starting point for exploring themes such as quantum geography and disorientation and for defining professional profiles for geographers with competences in GIS environment This book on a new and unexplored field of research could be a fundamental point of reference for professional philosophers and geographers interested in the theoretical reflection about the foundational concepts of GIScience It is also interesting reading material for students both undergraduates postgraduates and Ph D students in philosophy geography applied ontology GIScience geomatics and computer science Design Theory '88 Sandra L. Newsome,W.R. Spillers,Susan Finger,2013-03-07 In 1984 Nam Sub who was then the Assistant Director for Engineering at the National Science Foundation NSF created the Design Theory and Methodology Program Among his goals in creating this program were to develop a science of engineering design and to establish design as an accepted field of engineering research From 1984 to 1986 this program was directed by Susan Finger from 1986 to the present Jack Dixon has been the director The program itself has covered a broad range of disciplines from chemical engineering to architecture and a broad range of research paradigms from psychological experiments to mathematical models The present volume is based on the second NSF Grantee Workshop on Design Theory and Methodology called Design Theory 88 which was held June 2 5 1988 at Rensselaer Polytechnic Institute in Troy NY USA It is however not strictly a proceedings since it includes some material that was not presented at the Workshop and since it omits some papers and discussions that were presented at the Workshop At the Workshop invited speakers presented overviews of six different research areas based on summaries submitted in advance by the grantees of the Design Theory and Methodology Program Since most of the speakers were not supported under the NSF program they brought fresh views to it The other papers in this book were submitted directly to this volume and were not presented at the Workshop **The Principles of Psychology** John Bascom,1872 **The Automobile** ,1907 *Papers from the Department of Marine Biology of the Carnegie Institution of Washington* ,1921 The American Mathematical Monthly ,1914 Includes section Recent publications **Essays** ,1878 **The Engineer** ,1902 **Transactions of the Canadian Society of Civil Engineers** Canadian Society of Civil Engineers,1902 **Mammalian physiology** Sir Charles Scott Sherrington,1919 *The New International Encyclopædia* Daniel Coit Gilman,Harry Thurston Peck,Frank Moore

Sutton,2015-11-19 We live in the materialist physical world of three dimensions or 3 space What we observe with our senses
is what is real If it cannot be observed and measured it does not exist This is a sure comfortable world the ability to observe
and measure gives us certainty With this certainty we have in the last 200 years built an industrial society with technologies
based on measurable energies and devices controlled by tight all embracing and not to be challenged physical laws Except
that we have a problem These physical 3 space laws do not embrace or explain every observation There are numerous
exceptions anomalies and inconsistencies to the laws Moreover our 3 space technology ignores even the possibility that there
may exist forces and activities we cannot measure or observe In brief our reality is incomplete and if incomplete our human
laws are also incomplete So we ask is there another reality Another dimension which originates these anomalies and
inconsistencies that are not explainable in 3 space terms That our puzzling anomalies are actually the effects of an unseen
causal source This book explores technological anomalies to find they indeed form a paradigm that cannot be explained in
physical materialist terms This alternate paradigm cannot be explained with our 3 space terms but has its own set of laws
and conditions This we call 4 space and the view from 4 space is awe inspiring to say the least This paradigm has the seeds of
and is the basis of future technology Japan Weekly Mail ,1907 **Technical Descriptive Geometry** William Ezra
