The Use Of Tumor Models In Immunotoxicity Testing:

The Use of Tumor Models in Immunotoxicity Testing Nancy I. Kerkvliet, OREGON STATE UNIV CORVALLIS SCHOOL OF VETERINARY MEDICINE., 1983 The role of the immune system in the prevention and control of tumor growth has been a rapidly expanding area of research during the past decade The concept that a host could immunologically recognize and thus eliminate transformed cells from the body offered many new prospects for the prevention and treatment of cancer From a toxicology standpoint however immunologic control of tumor growth presented an additional area for concern that is that even if a chemical was not directly carcinogenic it might through effects on the immune system create an individual that was more susceptible to tumor growth and thus present an even more subtle hazard than a direct carcinogen Because of the biologic and toxicologic relevance of a tumor model our laboratory has been working to develop suitable tumor models for use in immunotoxicity testing In addition to the toxicologic significance of altered tumor susceptibility due to chemical exposure a tumor model could also provide several testing advantages from a technical standpoint

Medicine & Biology, 1984-02-14 *Toxicology in Transition* Gisela H. Degen, Jürg P. Seiler, Philip Bentley, 2012-12-06 The volume contains the main papers presented at the 1994 EUROTOX Congress Basel Switzerland August 21-24 1994 Toxicology has become a less descriptive science because more importance has been placed on the mechanisms underlying toxic effects This is reflected in symposia and workshops devoted to species differences in organ toxicity receptor mediated toxicity and stereochemical effects of xenobiotics Recent progress in the fields of immunotoxicology ecotoxicology and neurotoxicology is highlighted and documented together with the present discussion on harmonized regulatory guidelines

Clinical Environmental Health and Toxic Exposures John Burke Sullivan, Gary R. Krieger, 2001 Now in its revised and updated Second Edition this volume is the most comprehensive and authoritative text in the rapidly evolving field of environmental toxicology The book provides the objective information that health professionals need to prevent environmental health problems plan for emergencies and evaluate toxic exposures in patients Coverage includes safety regulatory and legal issues clinical toxicology of specific organ systems emergency medical response to hazardous materials releases and hazards of specific industries and locations Nearly half of the book examines all known toxins and environmental health hazards A Brandon Hill recommended title

Experimental Immunotoxicology Ralph J. Smialowicz, Michael P. Holsapple, 1996 Immunotoxicology has emerged as a vital and expanding discipline over the past several years Although the field of human immunotoxicology is arguably still in its infancy a number of animal model systems have been well established and validated Experimental Immunotoxicology provides an update on the recent advances in the field as it relates to animals and provokes discussion on approaches to the evaluation of human immunotoxicology It is an important reference source for professionals in immunology and toxicology The book begins with an overview of the mammalian immune system and covers the important role played by animal host susceptibility models It also gives an update on immunotoxicology in sub human primates Vulnerability of bone marrow and the consequences of damage to immune function as well as chemical induced immunosuppression as a consequence of exposure to chemicals are covered Most of the chapters are organized to include a description of the profile of immunotoxicity mechanisms of immunotoxicity species comparisons and research needs **The Environment Index** , 1986
