Torus Actions On Symplectic Manifolds Progress In Mathematics:

The Topology of Torus Actions on Symplectic Manifolds Michèle Audin, 2012-12-06 The material and references in this extended second edition of The Topology of Torus Actions on Symplectic Manifolds published as Volume 93 in this series in 1991 have been updated Symplectic manifolds and torus actions are investigated with numerous examples of torus actions for instance on some moduli spaces Although the book is still centered on convexity results it contains much more material in particular lots of new examples and exercises

Torus Actions On Symplectic Manifolds Michèle Audin, 2004-09-27 The material and references in this extended second edition of The Topology of Torus Actions on Symplectic Manifolds published as Volume 93 in this series in 1991 have been updated Symplectic manifolds and torus actions are investigated with numerous examples of torus actions for instance on some moduli spaces Although the book is still centered on convexity results it contains much more material in particular lots of new examples and exercises

Toric Topology Megumi Harada, 2008 Toric topology is the study of algebraic differential symplectic geometric combinatorial and homotopy theoretic aspects of a particular class of torus actions whose quotients are highly structured The combinatorial properties of this quotient and the equivariant topology of the original manifold interact in a rich variety of ways thus illuminating subtle aspects of both the combinatorics and the equivariant topology Many of the motivations and guiding principles of the field are provided by though not limited to the theory of toric varieties in algebraic geometry as well as that of symplectic toric manifolds in symplectic geometry This volume is the proceedings of the International Conference on Toric Topology held in Osaka in May June 2006 It contains about 25 research and survey articles written by conference speakers covering many different aspects of and approaches to torus actions such as those mentioned above Some of the manuscripts are survey articles intended to give a broad overview of an aspect of the subject all manuscripts consciously aim to be accessible to a broad reading audience of students and researchers interested in the interaction of the subjects involved We hope that this volume serves as an enticing invitation to this emerging field

Methods of Qualitative Theory of Differential Equations and Related Topics Lev M. Lerman, 2000

Geometric Invariant Theory David Mumford, John Fogarty, Frances Kirwan, 1994-03-29 This standard reference on applications of invariant theory to the construction of moduli spaces is a systematic exposition of the geometric aspects of classical theory of polynomial invariants This new revised edition is completely updated and enlarged with an additional chapter on the moment map by Professor Frances Kirwan It includes a fully updated bibliography of work in this area

Symplectic Torus Actions Alvaro Pelayo, 2007

Morse Theory and Floer Homology Michèle Audin, Mihai Damian, 2013-11-29 This book is an introduction to modern methods of symplectic topology It is devoted to explaining the solution of an important problem originating from classical mechanics the Arnold conjecture which asserts that the number of 1 periodic trajectories of a non degenerate Hamiltonian system is bounded below by the dimension of the homology of the underlying manifold The first part is a thorough introduction to Morse theory

a fundamental tool of differential topology It defines the Morse complex and the Morse homology and develops some of their applications Morse homology also serves a simple model for Floer homology which is covered in the second part Floer homology is an infinite dimensional analogue of Morse homology Its involvement has been crucial in the recent achievements in symplectic geometry and in particular in the proof of the Arnold conjecture The building blocks of Floer homology are more intricate and imply the use of more sophisticated analytical methods all of which are explained in this second part The three appendices present a few prerequisites in differential geometry algebraic topology and analysis The book originated in a graduate course given at Strasbourg University and contains a large range of figures and exercises Morse Theory and Floer Homology will be particularly helpful for graduate and postgraduate students *Handbook of Differential Geometry* Franki J.E. Dillen, Leopold C.A. Verstraeten, 2005-11-29 In the series of volumes which together will constitute the Handbook of Differential Geometry we try to give a rather complete survey of the field of differential geometry The different chapters will both deal with the basic material of differential geometry and with research results old and recent All chapters are written by experts in the area and contain a large bibliography In this second volume a wide range of areas in the very broad field of differential geometry is discussed as there are Riemannian geometry Lorentzian geometry Finsler geometry symplectic geometry contact geometry complex geometry Lagrange geometry and the geometry of foliations Although this does not cover the whole of differential geometry the reader will be provided with an overview of some its most important areas Written by experts and covering recent research Extensive bibliography Dealing with a diverse range of areas Starting from the basics **Current Trends in Transformation Groups** Anthony Bak, Masaharu Morimoto, Fumihiro Ushitaki, 2002-07-31 This book provides an overview of some of the most active topics in the theory of transformation groups over the past decades and stresses advances obtained in the last dozen years The emphasis is on actions of Lie groups on manifolds and CW complexes Manifolds and actions of Lie groups on them are studied in the linear semialgebraic definable analytic smooth and topological categories Equivalent vector bundles play an important role The work is divided into fifteen articles and will be of interest to anyone researching or studying transformations groups The references make it easy to find details and original accounts of the topics surveyed including tools and theories used in these accounts *Mirror Symmetry* Claire Voisin, 1999 Describes recent works motivated by the discovery of the mirror symmetry phenomenon by physicists The book opens with the geometry of Calabi Yau manifolds and the ideas from quantum field theory that led to this discovery The rest of the book is devoted to the mathematical aspects of mirror symmetry No index Annotation copyrighted by Book News Inc Portland OR **Cox Rings** Ivan Arzhantsev, 2015 This book provides a largely self contained introduction to Cox rings and their applications in algebraic and arithmetic geometry **Deformation Theory and Symplectic Geometry** Daniel Sternheimer, John Rawnsley, Simone Gutt, 1997-07-31 Proceedings of the Ascona Meeting June 1996 [Lectures on the Geometry of Quantization](#) Sean Bates, Alan Weinstein, 1995 **Symplectic Manifolds with No Kaehler Structure** Alesky

Tralle, John Oprea, 1997-07-17 This is a research monograph covering the majority of known results on the problem of constructing compact symplectic manifolds with no Kaehler structure with an emphasis on the use of rational homotopy theory In recent years some new and stimulating conjectures and problems have been formulated due to an influx of homotopical ideas Examples include the Lupton Oprea conjecture the Benson Gordon conjecture both of which are in the spirit of some older and still unsolved problems e g Thurston s conjecture and Sullivan s problem Our explicit aim is to clarify the interrelations between certain aspects of symplectic geometry and homotopy theory in the framework of the problems mentioned above We expect that the reader is aware of the basics of differential geometry and algebraic topology at graduate level
