Cooperative Spectrum Sensing and Resource Allocation Strategies in Cognitive Radio Networks Xavier Fernando,Ajmerly Sultana,Sattar Hussain,Lian Zhao,2018-05-22 Cognitive radio networks CRN will be widely deployed in the near future and this SpringerBrief covers some important aspects of it as well as highlighting optimization strategies in Resource Allocation and Spectrum Sensing in CRNs The cognitive approach in radio access is introduced in the first part of

this SpringerBrief and then next the benefits of cooperative spectrum sensing are highlighted and a framework for studying it under realistic channel conditions is described. New exact closed form expressions for average false alarm probability and average detection probability are derived in this scenario. A novel approximation to alleviate the computational complexity of the proposed models are also discussed. Once the spectrum opportunities are identified, efficient and systematic resource allocation RA shall be performed. The second part of this SpringerBrief describes the taxonomy for the RA process in CRN. A comprehensive overview of the optimization strategies of the CRN RA is also provided. The device-to-device (D2D) communication scenario is discussed then as a case study and various optimization strategies for the application of the CR technology in the D2D realm is studied. The application of advanced geometric water filling (GWF) approach in CRN D2D environment for optimum resource allocation is presented in detail. Numerical results provide more insight quantitatively. Overall, this book is suitable for a wide audience that include students, faculty, and researchers in wireless communication area and professionals in the wireless service industry.

Sensing Vehicle Conditions for Detecting Driving Behaviors

Jiadi Yu, Yingying Chen, Xiangyu Xu, 2018-04-18. This SpringerBrief begins by introducing the concept of smartphone sensing and summarizing the main tasks of applying smartphone sensing in vehicles. Chapter 2 describes the vehicle dynamics sensing model that exploits the raw data of motion sensors, i.e., accelerometer and gyroscope, to give the dynamic of vehicles including stopping, turning, changing lanes, driving on uneven road, etc. Chapter 3 detects the abnormal driving behaviors based on sensing vehicle dynamics. Specifically, this brief proposes a machine learning based fine-grained abnormal driving behavior detection and identification system (D3) to perform real-time, high-accurate abnormal driving behaviors monitoring using the built-in motion sensors in smartphones. As more vehicles take part in the transportation system in recent years, driving or taking vehicles have become an inseparable part of our daily life. However, increasing vehicles on the roads bring more traffic issues including crashes and congestions, which make it necessary to sense vehicle dynamics and detect driving behaviors for drivers. For example, sensing lane information of vehicles in real time can be assisted with the navigators to avoid unnecessary detours, and acquiring instant vehicle speed is desirable to many important vehicular applications. Moreover, if the driving behaviors of drivers like inattentive and drunk driver can be detected and warned in time, a large part of traffic accidents can be prevented. However, for sensing vehicle dynamics and detecting driving behaviors, traditional approaches are grounded on the built-in infrastructure in vehicles such as infrared sensors and radars, or additional hardware like EEG devices and alcohol sensors, which involves high cost. The authors illustrate that smartphone sensing technology, which involves sensors embedded in smartphones including the accelerometer, gyroscope, speaker, microphone, etc., can be applied in sensing vehicle dynamics and driving behaviors. Chapter 4 exploits the feasibility to recognize abnormal driving events of drivers at an early stage. Specifically, the authors develop an Early Recognition system (ER) which recognizes inattentive driving events at an early stage and alerts drivers timely, leveraging built-in audio devices on smartphones. An overview of the

state of the art research is presented in chapter 5 Finally the conclusions and future directions are provided in Chapter 6
