**Topics in Nonlinear Functional Analysis** Djairo Guedes de Figueiredo, 1967      **Topics in Nonlinear Functional Analysis** L. Nirenberg, 1974 Since its first appearance as a set of lecture notes published by the Courant Institute in 1974 this book served as an introduction to various subjects in nonlinear functional analysis The current edition is a reprint of these notes with added bibliographic references Topological and analytic methods are developed for treating nonlinear ordinary and partial differential equations The first two chapters of the book introduce the notion of topological degree and develop its basic properties These properties are used in later chapters in the discussion of bifurcation theory the possible branching of solutions as parameters vary including the proof of Rabinowitz global bifurcation theorem Stability of the branches is also studied The book concludes with a presentation of some generalized implicit function theorems of Nash Moser type with applications to Kolmogorov Arnold Moser theory and to conjugacy problems For more than 20 years this book continues to be an excellent graduate level textbook and a useful supplementary course text Titles in this series are copublished with the Courant Institute of Mathematical Sciences at New York University      *Topics in Nonlinear Functional Analysis* L. Nirenberg, 2025      **Topics in nonlinear functional analysis** Louis Nirenberg, 1974      **Some Topics in Nonlinear Functional Analysis** Mohan C. Joshi, Ramendra K. Bose, 1985      **Lectures In Nonlinear Functional Analysis: Synopsis Of Lectures Given At The Faculty Of Physics Of Lomonosov Moscow State University** Maxim Olegovich Korpusov, Alexey V Ovchinnikov, Alexander Anatolyevich Panin, 2021-12-28 This book is a systematic presentation of basic notions facts and ideas of nonlinear functional analysis and their applications to nonlinear partial differential equations It begins from a brief introduction to linear functional analysis including various types of convergence and functional spaces The main part of the book is devoted to the theory of nonlinear operators Various methods of the study of nonlinear differential equations based on the facts of nonlinear analysis are presented in detail This book may serve as an introductory textbook for students and undergraduates specializing in modern mathematical physics      *Topics in Nonlinear Functional Analysis* L. **Topics in Nonlinear Functional Analysis** Djairo Guedes de Figueiredo (Mathematiker, Brasilien), 1967      **Linear and Nonlinear Functional Analysis with Applications** Philippe G. Ciarlet, 2013-10-10 This single volume textbook covers the fundamentals of linear and nonlinear functional analysis illustrating most of the basic theorems with numerous applications to linear and nonlinear partial differential equations and to selected topics from numerical analysis and optimization theory This book has pedagogical appeal because it features self contained and complete proofs of most of the theorems some of which are not always easy to locate in the literature or are difficult to reconstitute It also offers 401 problems and 52 figures plus historical notes and many original references that provide an idea of the genesis of the important results and it covers most of the core topics from functional analysis

**Nonlinear Functional Analysis** Klaus Deimling, 2013-10-09 This text offers a survey of the main ideas concepts and methods that constitute nonlinear functional analysis It features extensive commentary many examples and interesting challenging exercises 1985 edition

**Topics in Nonlinear Functional Analysis, 1973-1974 [By] L. Nirenberg. Notes by R.A. Artino** L. Nirenberg, Courant Institute of Mathematical Sciences, 1974

**Geometric Properties of Banach Spaces and Nonlinear Iterations** Charles Chidume, 2008-12-21 The contents of this monograph fall within the general area of nonlinear functional analysis and applications We focus on an important topic within this area geometric properties of Banach spaces and nonlinear iterations a topic of intensive research e orts especially within the past 30 years or so In this theory some geometric properties of Banach spaces play a crucial role In the rst part of the monograph we expose these geometric properties most of which are well known As is well known among all in nite dim sional Banach spaces Hilbert spaces have the nicest geometric properties The availability of the inner product the fact that the proximity map or nearest point map of a real Hilbert space  $H$  onto a closed convex subset  $K$  of  $H$  is Lipschitzian with constant 1 and the following two identities  $\|x - y\| \leq \|x - z\| + \|z - y\|$   $\|x - y\| \leq \|x - z\| + \|z - y\|$  which hold for all  $x, y \in H$  are some of the geometric properties that char terize inner product spaces and also make certain problems posed in Hilbert spaces more manageable than those in general Banach spaces However as has been rightly observed by M Hazewinkel many and probably most mathematical objects and models do not naturally live in Hilbert spaces Consequently to extend some of the Hilbert space techniques to more general Banach spaces analogues of the identities and have to be developed

**Nonlinear Functional Analysis** Jacob T. Schwartz, 1969      *Contributions to Nonlinear Functional Analysis* Eduardo H. Zarantonello, 2014-05-10 Contributions to Nonlinear Functional Analysis contains the proceedings of a Symposium on Nonlinear Functional Analysis held in Madison Wisconsin on April 12 14 1971 under the sponsorship of the University of Wisconsin s Mathematics Research Center The symposium provided a forum for discussing various topics related to nonlinear functional analysis from transversality in nonlinear eigenvalue problems to monotonicity methods in Hilbert spaces and some applications to nonlinear partial differential equations Comprised of 15 chapters this book begins by presenting an

extension of Leray Schauder degree and an application to a nonlinear elliptic boundary value problem The discussion then turns to the use of degree theory to prove the existence of global continua of solutions of nonlinear eigenvalue problems transversality in nonlinear eigenvalue problems and how variational structure can be used to study some local questions in bifurcation theory Subsequent chapters deal with the notion of monotone operators and monotonicity theory a nonlinear version of the Hille Yosida theorem a version of the penalty method for the Navier Stokes equations and various types of weak solutions for minimizing problems in the spirit of duality theory for convex functionals This monograph will be of interest to students and practitioners in the field of mathematics who want to learn more about nonlinear functional analysis

**Nonlinear Functional Analysis and Its Applications** Radu Precup, 2021-04-14 This book consists of nine papers covering a number of basic ideas concepts and methods of nonlinear analysis as well as some current research problems Thus the reader is introduced to the fascinating theory around Brouwer s fixed point theorem to Granas theory of topological transversality and to some advanced techniques of critical point theory and fixed point theory Other topics include discontinuous differential equations new results of metric fixed point theory robust tracker design problems for various classes of nonlinear systems and periodic solutions in computer virus propagation models

**Nonlinear Functional Analysis: A First Course** S. Kesavan, 2022-06-04 The book discusses the basic theory of topological and variational methods used in solving nonlinear equations involving mappings between normed linear spaces It is meant to be a primer of nonlinear analysis and is designed to be used as a text or reference book by graduate students Frechet derivative Brouwer fixed point theorem Borsuk s theorem and bifurcation theory along with their applications have been discussed Several solved examples and exercises have been carefully selected and included in the present edition The prerequisite for following this book is the basic knowledge of functional analysis and topology

**Nonlinear Functional Analysis with Applications to Combustion Theory** Kazuaki Taira, 2025-05-14 Explore the fascinating intersection of mathematics and combustion theory in this comprehensive monograph inspired by the pioneering work of N N Semenov and D A Frank Kamenetskii Delving into the nonlinear functional analytic approach this book examines semilinear elliptic boundary value problems governed by the Arrhenius equation and Newton s law of heat exchange Key topics include Detailed analysis of boundary conditions including isothermal Dirichlet and adiabatic Neumann cases Critical insights into ignition and extinction phenomena in stable steady temperature profiles linked to the Frank Kamenetskii parameter Sufficient conditions for multiple positive solutions revealing the S shaped bifurcation curves of these problems Designed for researchers and advanced students this monograph provides a deep understanding of nonlinear functional analysis and elliptic boundary value problems through their application to combustion and chemical reactor models Featuring detailed illustrations clearly labeled figures and tables this book ensures clarity and enhances comprehension of complex concepts Whether you are exploring combustion theory functional analysis or applied mathematics this text offers profound insights and a thorough mathematical foundation
