Topological Transformation Freud's Theory:

The Topological Transformation of Freud's Theory Jean-Gerard Bursztein, 2018-03-22 In this book the author presents his reading of psychoanalysis in the spirit of its founder Sigmund Freud and explores the transformations of Freud's work by his followers. The author notes that some of these followers trimmed it down even to exclude the death drive which was one of Freud's fundamental principles. Freud's theory has also been transformed by Lacan who in the mid 1950s embarked on a lifelong enterprise to recast it in a fruitful debate with the sciences and the humanities. Such a transformation brought by Lacan was somewhat paradoxically necessary to show the importance of Freud's findings for the understanding of subjectivity.

Freud, the Contemporary Super-ego, and Western Morality Giosuè Ghisalberti, 2023-10-09 Freud the Contemporary Super ego and Western Morality traces the origins of the relationship between the morality of the super ego and the destructive impulse of the death drive in the liberal democracies of the 21st century. Giosuè Ghisalberti begins by refuting the analysis by contemporary social theorists of the phenomenon described as the return of the religious, presenting instead a comprehensive set of ideas as outlined by Freud in the writings of the 1920s and the analysis of a contemporary theological-political unconscious. Ghisalberti argues that the psyche of the liberal West has regressed to an infantile and primitive present driven by an unconscious hostility towards the Oedipus complex and more comprehensively to Western civilization as a whole. The book re-examines Freud's psychoanalytic ideas on the nature of obsessions interpreted first from the murder of the primal father in Totem and Taboo and turns to his grounding ideals of intelligence, creativity and freedom as the affirmation of the coming to be human in modernity. Freud the Contemporary Super ego and Western Morality will be of great interest to psychoanalysts in practice and in training. It will also be key reading for academics and scholars of psychoanalytic studies, philosophy, political theory and the humanities.

Lacan, Mortality, Life and Language Berjanet Jazani, 2021-09-30 This work presents thoughts on the Lacanian subject. What are we as a speaking being? What makes us a human subject from a psychoanalytic perspective? Is it feelings and affect that make us a human? Or was it the Freudian invention of the unconscious that drew a line between human and a non-human? What can be learnt from the subject of the unconscious in the clinic of psychoanalysis that can help us to approach these questions? Berjanet Jazani takes examples from the psychoanalytic clinic as well as cultural references ranging from ancient Persia to London's Theatreland in order to elaborate the question of subjectivity, reality and truth from a psychoanalytic perspective. In the era of hyperreality, the agency of branding and marketing strategies has overshadowed the reality of a human being, his true nature and agency. The hyperreality of contemporary society creates in each individual a false hope of becoming a high fidelity copy of their idols and such a fallacy has led many to believe that this is what determines their being in a social bond. Jazani explores the question of the reality and mortality of a subject through a Lacanian prism from the theorising of analytical subjectivity that starts with the Freudian Oedipal myth more than a century ago to the futurist aspiration to fabricate human beings according to some

ideal model This book will be important reading for students and academics of Lacanian psychoanalysis as well as professionals concerned with complex social problems **The Lacan Tradition** Lionel Bailly, David Lichtenstein, Sharmini Bailly, 2018-04-09 The Lacanian Tradition is unique among psychoanalytic schools in its influence upon academic fields such as literature philosophy cultural and critical studies This book aims to make Lacan's ideas accessible and relevant also to mainstream psychoanalysts and to showcase developments in Lacanian thinking since his death in 1981 The volume highlights the clinical usefulness of such concepts as the paternal metaphor the formula of fantasy psychic structure the central role of desire and the interlinking of the individual subject in the matrix of the Other While these themes are woven through all the papers each is a highly individual reflection upon some aspect of Lacanian theory practice or history

integration *Topological Properties and Global Structure of Space-Time* Peter G. Bergmann, Venzo De Sabbata, 2013-12-19
The Ninth Course of the International School of Cosmology and Gravitation of the Ettore Majorana Centre for Scientific Culture is concerned with Topological Properties and Global Structure of Space Time We consider this topic to possess great importance Our choice has also been influenced by the fact that there are many questions as yet unsolved Standard general relativity describes space time as a four dimensional pseudo Riemannian manifold but it does not prescribe its large scale structure In order to attempt answers to some topological questions such as whether our universe is open or closed whether it is orientable and whether it is complete or possesses singularities various theoretical approaches to global aspects of gravitational physics are presented here As topological questions play a role in non standard theories as well it will be found that some of the lectures and seminar talks in this volume adopt the point of view of standard relativity whereas others are based on different theories such as Kaluza Klein theories bimetric theories and supergravity We have found it difficult to organize these papers into classes say standard and non standard theory or models with and without singularities One paper by R Reasenberg is experimental Its purpose was to give the theorists present an inkling of the opportunities as well as the pitfalls of experimental research in gravitational physics Accordingly we have arranged all contributions alphabetically by first named author

Freud's Schreber Between Psychiatry and Psychoanalysis Thomas Dalzell, 2018-03-29 This book investigates what was distinctive about the predisposition to psychosis Freud posited in Daniel Paul Schreber a presiding judge in Saxony's highest court It argues that Freud's 1911 Schreber text reversed the order of priority in late nineteenth century conceptions of the disposing causes of psychosis the objective biological and subjective biographical to privilege subjective disposition to psychosis but without returning to the paradigms of early nineteenth century Romantic psychiatry and without obviating the legitimate claims of biological psychiatry in relation to hereditary disposition While Schreber is the book's reference point this is not a general treatment of Schreber or of Freud's reading of the Schreber case It focuses rather on what was new in Freud's thinking on the disposition to psychosis what he learned from his psychiatrist contemporaries and what he did not and whether or not psychoanalysts have fully received his aetiology

Theory Across Disciplines Jeffrey R. Di Leo, 2025-08-07 Surveying the extraordinary scope of contemporary theory Jeffrey R Di Leo brings together contributors from around the world to speak to the ways in which theoretical concerns from a variety of disciplines operate within their respective fields of concern Contemporary theory is a multi and inter disciplinary endeavour that operates within and among the humanities the social sciences and many of the professions In addition to its now somewhat more standard fare work in these areas it has also made substantial inroads into the natural sciences and the formal sciences To be sure more disciplines from across the academy have integrated theory into their practice than at any other time in history Di Leo and his fellow contributors survey the workings of contemporary theory within and among the humanities sciences and professions including contributions on literary studies film studies gender studies visual art law biology and geology They

bring together distinguished theorists whose work spans the academy to speak to the ways in which theoretical concerns from a variety of disciplines work within their respective fields of concern

Is Oedipus Online? Jerry Aline Flieger, 2005-05-06 Psychoanalysis as a navigation device for the cultural maze of the twenty first century Can Freud be updated in the twenty first century or is he a venerated but outmoded genius asks Jerry Aline Flieger In *Is Oedipus Online* Flieger stages an encounter between psychoanalysis and the new century testing the viability of Freud's theories in light of the emergent realities of our time Responding to prominent critics of psychoanalysis and approaching our current preoccupations from a Freudian angle she presents a reading of Freudian theory that coincides with and even clarifies new concepts in science and culture Fractals emergence topological modeling and other nonlinearities for example can be understood in light of both Freud's idea of the symptom as a nodal point and Lacan's concept of networks rather than sequential cause and effect that link psychic realities At the same time Flieger suggests how emerging paradigms in science and culture may elucidate Freud's cultural theory Like Slavoj Žižek editor of the *Short Circuits* series Flieger shifts effortlessly from field to field discussing psychoanalysis millennial culture nonlinear science and the landscape of cyberspace In the first half of the book *Re-siting Oedipus* she draws on the work of Lyotard Žižek Deleuze Virilio Baudrillard Haraway and others to refute the assumption of Freud's outdatedness in the new century Then in *Freud Sitings in Millennial Theory* she recasts oedipal theory siting sighting citing Freud in a twenty first century context Thinking of Oedipus decipherer of enigmas wanderer as a navigator or search engine allows us to see psychoanalysis as a navigation device for the cultural maze of the bimillennial era and Oedipus himself as a circuit of intersubjective processes by which we become human For humanity still needed in the posthuman century is at the core of Freud's theory Reading Freud today Flieger writes reminds us of the complications of the Sphinx's riddle the enigma that Oedipus only thought he solved the question of what it is to be human Psychoanalysis continues to pose that question at the crossroads between instincts and their vicissitudes

The Politics of Vibration Marcus Boon, 2022-08-08 In *The Politics of Vibration* Marcus Boon explores music as a material practice of vibration Focusing on the work of three contemporary musicians Hindustani classical vocalist Pandit Pran Nath Swedish drone composer and philosopher Catherine Christer Hennix and Houston based hip hop musician DJ Screw Boon outlines how music constructs a vibrational space of individual and collective transformation Contributing to a new interdisciplinary field of vibration studies he understands vibration as a mathematical and a physical concept as a religious or ontological force and as a psychological determinant of subjectivity Boon contends that music as a shaping of vibration needs to be recognized as a cosmopolitical practice in the sense introduced by Isabelle Stengers in which what music is within a society depends on what kinds of access to vibration are permitted and to whom This politics of vibration constitutes the hidden ontology of contemporary music because the organization of vibration shapes individual music scenes as well as the ethical choices that participants in these scenes make about how they want to live in the world

The Graph of Desire Alfredo

Eidelsztein,2018-05-08 The graph of desire is one of the principal points of reference in Lacanian psychoanalysis In this book the graph is analyzed in its multiple aspects and relations Step by step the author reveals and considers formulations from the simplest to the most complex The treatment of this issue does not deal only with the development and explanation of its logical mathematical and topological aspects but also goes through the psychoanalytical theory and practice The author has immersed himself in Lacan's text *The Subversion of the Subject and the Dialectic of Desire in the Freudian Unconscious* to uncover and bring this fascinating subject to light **Lacan: Topologically Speaking** Ellie Ragland,2020-09-08 The study of topology examines the way something can change shape while still retaining the same properties Jacques Lacan devoted the last part of his teaching to the topology of the subject During the 50s he gauged the topology of surfaces torus Moebius strips Klein bottles crosscaps and from 1972 on he studied the topology of knots Borromean the sinthome Showing that bodily and mental life function topologically he did what no one had done before he added to the logic of how representations function the logic of jouissance or libidinal meaning that materializes language by making desire fantasy and the partial drives ascertainable functions of it For Lacan topology is neither myth nor metaphor It is the precise way we may understand the construction and appearance of the subject Space is multidimensional in terms of both meaning and logic Lacanian topology answers questions of post structuralism while revealing the flaws in its theories It also advances a 21st century teaching that obviates symbolic logic and its positivistic assumptions Applications are made to the clinic to literature and to the social sciences The authors collected here include world renowned Lacanian topologists such as Jacques Alain Miller Jeanne Lafont Jean Paul Gilson Pierre Skriabine Juan David Nasio Jean Michel Vappereau and several new theorists from the United States and Europe **War and Social Theory** N. Curtis,2005-11-10 The persistence of war as a feature of modern life is examined through issues of identity and difference that is the construction of self and other as individual or community Key texts relating specifically to identity and war are addressed including those by Nietzsche Heidegger Marcuse Freud Lacan Honneth Bataille Simmel Elshtain Ruddick Schmitt Delanda Hardt and Negri Baudrillard Virilio Beck and Joas Its theoretical approach sets this study apart from the traditional political science and IR approaches to the subject and makes a significant contribution within this area of social theory cultural studies and communication studies *Theory at Yale* Marc Redfield,2015-11-02 This book examines the affinity between theory and deconstruction that developed in the American academy in the 1970s by way of the Yale Critics Harold Bloom Paul de Man Geoffrey Hartman and J Hillis Miller sometimes joined by the French philosopher Jacques Derrida With this semi fictional collective theory became a media event first in the academy and then in the wider print media in and through its phantasmatic link with deconstruction and with Yale The important role played by aesthetic humanism in American pedagogical discourse provides a context for understanding theory as an aesthetic scandal and an examination of the ways in which de Man's work challenges aesthetic pieties helps us understand why by the 1980s he above all had come to personify theory Combining a broad account of the Yale Critics

phenomenon with a series of careful reexaminations of the event of theory Redfield traces the threat posed by language s unreliability and inhumanity in chapters on lyric on Hartman s representation of the Wordsworthian imagination on Bloom s early theory of influence in the 1970s together with his later media reinvention as the genius of the Western Canon and on John Guillory s influential attempt to interpret de Manian theory as a symptom of literature s increasing marginality A final chapter examines Mark Tansey s paintings Derrida Queries de Man and Constructing the Grand Canyon paintings that offer subtle complex reflections on the peculiar event of theory as deconstruction in America Theory Building in

Developmental Psychology P. van Geert,1986-07-01 Discussing from various viewpoints problems in theory building and theory evaluation this book starts from the assumption that theories of development are particular ways of defining the concept of psychological development in terms of a specific conceptual framework as well as in terms of a specific empirical range nature of the explained phenomena prototypical experiments and applications etc The first three parts deal with basic problems in modern developmental psychology namely ways of describing development and how they direct theory formation causes and conditions of development in relation with learning and the problem of precursors and the individual and the socio cultural dimension in theory building The fourth part demonstrates three different forms of theory building while the final part deals with an old philosophical problem in developmental psychology the rationalism empiricism controversy

The Pleasure of Thinking Tania Zittoun,2023-10-19 Demonstrates the fundamental importance of the pleasure of thinking for human experience and development in the lifecourse **Does the Woman Exist?** Paul Verhaeghe,2013-04-16 This book describes how Freud attempted to chart hysteria yet came to a standstill at the problem of woman and her desire and of how Lacan continued along this road by creating new conceptual tools The difficulties and upsets encountered by both men are examined This lucid presentation of the dialectical process that carries Lacan through the evolution of Freud s thought offers profound insights into the place of the feminine mystique in our social fabric Patiently and carefully Verhaeghe applies the Lacanian grid to Freud s text and succeeds in explaining Lacan s formulations without merely recapitulating his theories The reader is informed along the way not only of Lacan s take on Freudian ideas but also of the array of interpretations emerging from other trends in post Freudian literature including feminist revisionism Metaphors and Action Schemes Robert L. Schwarz,1997 All our abstract ideas are based on metaphors and action schemes Jean Piaget did voluminous research on how thought develops in children through assimilation of action schemes George Lakoff and Mark Johnson have done pioneering work on metaphors and action schemes in everyday thinking This book builds on those foundations looking at the role played by metaphors and action schemes in the history of ideas The author begins his argument by taking a critical look at the philosophy of metaphor from Aristotle to the present While he sees metaphor as simply conceiving one thing in terms of another he points out that this is an inexhaustible process because the context in which the process takes place is always changing Change opens up new possibilities of similarity Thus the metaphor is an

open door into a space of infinite possibilities **Boundaries in China** John Hay, 1994 Boundary making a crucial element in human cultural creativity links these essays exploring Chinese art and society Traversing time and cultural category individual expression and social construct the authors demonstrate how a boundary may exist simultaneously as barrier threshold and interface The essays range from the creation of the first political and bureaucratic boundaries in early China to the dismantling of discursive boundaries in the post Mao era Spanning diverse subjects moving between ancient funerary art and the tension between self and image in modern Peking Opera they deftly explore the psychodynamics of Chinese society All the authors in this book are established Sinologists **Boundaries in China** will be stimulating reading for anyone interested to see how the seemingly tangential or peripheral can turn out to be of central concern in non Western and perhaps also Western art and culture **Domaine humain** ,1968
